perfect, art never. Look at the sea, the sky, or a piece of down: who would wish to take a lake from the sky, a ripple from the sea, an undulation from the downs? 'But scarcely anything could be looked at that man put his hand to that satisfied the eye. One of the greatest obstacles that lay in the way of attaining to anything approaching perfection was the straining after unmeaning oddities. When this mania for "quaintness," as it was called, seized a man, it was all up with him. There certainly existed the power now to do good work. Workmen are now more skilful in the use of tools than of old: the great desideratum was skill in design. It was good to be a ready copyist, but it was better to be a ready designer. It was not shortness of funds which made bad buildings: a good architect cut his coat according to his cloth. In old times they had to put up very simple buildings as well as those of a more elaborate kind. Many of these remained, and all were in every way excellent as regards design and proportion. Unfortunately there was no fixed rule of proportion or of beauty. No doubt rules existed, but they were not always alike; and probably every form and every proportion was good in some position. After all, they should argue from their eye to their rules. How volatile was taste. The ladies had but to think of the style adopted by their grandmothers and compare it with that adopted by themselves. With respect to the male sex, too; how great was the change a few years had made. When he was at college a man did not wear a hair on his chin: now a young fellow looked like a cross between a goat and a sky terrier. These things could not be brought to a given rule. What was commonly called common sense was very uncommon; and the common sense of a person educated in a particular subject was very different from the common sense of a person uneducated in it. But even people of equal education and ability did not come to similar conclusions. Much should be allowed for the constitution of the mind and the eye. His eyes were very different from those of other people who had had equal opportunities. He had often seen new buildings which appeared so ugly to him that they almost made him ill; but others held a different opinion with respect to them. He could not understand how the east window of Carlisle Cathedral was less beautiful than the east window of Gloucester or of York. No doubt, the architects who despised the latter thought theirs the best. The only conclusion he could come to was, that the eyes of different people had different constitutions: what appeared beautiful to one, did not appear beautiful to another. He hoped to set his audience a-thinking; and if he did, it was no matter whether they all arrived at the same conclusion. Much had been said as to the right tendency of architecture. Some held that it was perpendicular, others that it was horizontal: he thought both were wrong. The great Architect of the Alps, the Andes, and the Peak of Teneriffe, pointed it out unmistakeably. All architecture was upward convergent, but in different degrees,—at least, those buildings pleased best in which this tendency was most strongly apparent. Of course, if pushed to the extreme degree, they would have the pyramid. In designing a new church, the churches of the district should be studied, and local peculiarities should be adhered to. The national styles should be retained, instead of going abroad for models, unless some practical defect in the national was removed by the foreign. With respect to the new Foreign Offices, the most foolish objection that had been made to the adoption of English architecture was that it did not admit the light. The fact was, that the Elizabethan style, and that of the time of Henry VII. and Henry VIII., gave perfect lanterns, and the houses were, in consequence, so cold in winter that they could scarcely be lived in. As a rule, the Elizabethan houses had light on three sides, and what on earth was wanted more for the Foreign Offices in that respect? It might be interesting to state that the church of Clapton, in Northamptonshire, had been pulled down, and he had taken accurate measurements of it. The chancel arch was pointed, with the hood-mould zigzag, and one of the stones of part of a cross, with plait-work on it. The tower of that church had this peculiarity, that it was perfectly free, and without one single tie, although the arcading came up to it in the usual way. The first thing in designing a building was to have its proportions good. The doors, windows, and so forth should be in good proportion to the other parts of the building. A common error was, not to begin high enough,—that is, not to have made a platform. The platform and the plinth were main items in giving the upward convergency, of which he was an advocate. The platform allowed for accumulations around the building, and for its sinking, for it was a well-established fact that all buildings sink. The Greek temples were all put upon steps, and the steps were used for the purpose of giving the upward convergency. The steps were so high that no one could step up them, but real steps were put in the apparent steps. The people, however, who carried out the platform system to its fullest development, were the Mexicans: all their temples were to be found so placed. They never began building until they had the platform so constructed that a grand effect was secured. The Eleanor Crosses were all placed on steps. Lincoln Cathedral was high, so was Exeter. No one liked to go down to a house: he did not allude to houses in valleys, but to the ground just around them. When wishing to make a sketch, a man moved about until he got things into good relative places; and so in designing buildings they should have regard to the directions in which it would be viewed, and to the surrounding objects. Persons came up to London, and were quite disappointed if an architect did not knock off the plan of a house to be built hundreds of miles away, totally irrespective of whether it was to be built on the top of a Welsh Mountain, or on the flat of a Lincolnshire Fen. These people clearly belonged to the seventeen millions to whom he had alluded in the opening. Having got good proportions, the next thing to attend to was to have good foundations—a matter too often neglected. Often, too, walls were not wetted enough. Good walls could not be made with dry stones. When a building was pulled down the foundation was always hardest, because kept damp. He considered plinth very important where the object was, as it should be, to secure pictorial effect. Many architects rejoiced in putting windows "of sorts," as the cotton spinners would say; but these belonged to the "quaint" order of which he had made mention. In many churches,—Exeter, for instance, the general outline was the same, but the tracery differed. With respect to roofs, he believed that the imperfect construction of old roofs had done more than anything else to destroy the walls. A wooden roof was supposed to support itself; but a vault was supposed to be supported by abutments, which were often found to be defective. Our ancestors were not up to roofing. They never acted on the plan of bolts and straps. They thought massiveness of timber would keep the roof firm, but they were mistaken. It was a pity that they did not use a few pennyworths of the iron that they made use of elsewhere in binding and strapping the roof. He might mention that he found square-ended tiles and slates best. The fancy tiles did not fit the valleys; and that cast lead he had proved to be better than rolled. With regard to glazing, bad painted glass was worse than plain quarries. The quarries should always be in proportion to the size of the opening. Some stanchions were outside, and some inside. There were objections to both, but he liked those inside best. He had never studied painted glass, and, therefore, only looked at it as a skeleton. He considered that painted borders or beads to plain windows were very ugly; but he approved of a grey border to clear the tracery. He could not admire figures in impossible dresses, or in queer postures, or a subject carried across the tracery. Modern glass failed from want of granulation, from want of variety. As to flooring, carpets or matting had no business in churches. Tiles, stone, or marble should be used for the passages, and blocks of wood for the pews. He preferred, for appearance sake, to have the floor of the pews a few inches above the floor of the passages. The seats should be sufficiently large, and provided with kneeling stools. Ornament was of two kinds,—one that which was necessary, the other that which was adopted for the sake of ornament. The first was best, but the line left was very vague. Light and shade were equivalent to form; for without shadow we see no form, and without form we see no shadow. As in a picture so in a building,—various degrees of light and shade are required. There was often poverty of shadow from too slight a projection of gables. He believed that the earliest ornament to be found in this country was the plait work, or Runic knot work on crosses. At all events, it began in Saxon times, and was imported from the North. The mouldings of doors and windows should be different planes, and the effect was best when the planes were decided. The style of ornament should be regulated by the materials, metal, wood, or stone. He would not go into symbolism, or into conventionalism; and all carving of natural objects should be conventional to some extent. The eye and the mind should be satisfied in consistency, in form, in elaboration, and in colour. With respect to restorations, much was heard of the term, but little was seen of real restoration. Old churches were numerous; and various causes led to their wanting repairs and restoration. Restoration was a putting a thing back to a state in which it once was. A considerable portion of architects' business, as a body, was repairing old churches. The more money was spent on the building the more the architect was paid; so that the profession of an architect, or of a carver, or builder, was exactly opposed to the conservation of an old church or house. A very high-principled fox might refrain from annihilating the fowls of a squire who allowed him free run of his rabbit-warren, but the fowls' chance was bad. With a new church the case was exactly the reverse of what he had stated. More damage had been done to old churches in the last thirty years than in all the preceding years from the Reformation downwards. The Puritans did comparatively slight damage, and what they did was apparent and unmistakable. He need not argue for the importance of history. Old buildings were the material unlying records of a nation's history, and as such could not be overvalued. When an architect inserted his own new windows and doors instead of the slightly damaged and perhaps less pretentious ones he found; when he re-faced or perhaps *de*-faced the wall, and moulding, and pillars,—when he substituted new foliage for the damaged capital, he destroyed one atom of the annals of art—one line of the churches' evidences—one small portion of England's history. While there were few good restorations, he admitted that there were many beautiful new churches. He hoped that in future restorations the utmost care would be taken to restore, and not partially to construct anew,—not alone in point of material but in point of style.

THE ARCHITECTURE OF SPAIN.*

It is much to be regretted that the architectural monuments of Spain, which, through the circumstances of the history of that country, are a subject of deeper interest, and replete with more distinct and impressive lessons to the architect, than those of any other country, should be the least known of any in Europe. Indeed, in a degree to be of value to the architect (with few exceptions), the most noted of which is that of the Alhambra (so elaborately described by Mr. Owen Jones), they cannot be said to be known at all. I have not the presumption to pretend, in my paper of this evening, to make good that deficiency; for, although it has been my good fortune to contemplate those memorials of greatness and perfection in one of the most beautiful of the fine arts, I have done so without the culture of the professed architect, without taking necessary measurements, or analyzing the causes of those impressions of elegance, of playful fancy, of beauty or sublimity with which they struck me, being satisfied with the enjoyment of the effect that they produced; not contemplating that I should ever have the honour of addressing you (as this evening) upon the subject; and also not having provided myself with those plans and elevations of them, or even pictorial representations, which are almost essential to their perfect illustration; and without which, I fear, my descriptions may be but imperfectly understood. The only thing which is in my power and capacity to do, is to point out to you many of those monuments of architectural greatness which have been slightly alluded to, or wholly overlooked, whether from the imperfect information we possess of them, or from whatever other cause, by the greatest of the architectural historians and critics of our time, when treating of Spanish architecture; and to trace generally (though perhaps imperfectly) an outline of the course that architecture has pursued with the Spanish nation in its rise and progress, its culminating excellence, and its florid decadence;—in the course of which, indeed, it presents more salient points, more distinct phases, than the architecture of any other European nation.

I have said that the circumstances of the history of Spain impart an interest to its architectural monuments possessed by those of no other nation. Successive and distinct races of men have flooded, and held sway in, the Peninsula. The periods of their existence may be likened (to compare small

* Read by Mr. Hurlstone, President of the Society of British Artists, at the Architectural Exhibition, on the 12th inst.

things with vast ones) to the successive geological eras in the mighty history of the Earth, and to the distinctive fossil petrefactions which mark respectively those eras. The architectural monuments which these races of men have respectively left are the greatest and most impressive, if not the only, symbols of their history, their power, and their vigorous existence. And here let me remark a circumstance which colours with absorbing interest the architectural monuments of Spain,—a circumstance, indeed, which could not be otherwise in the loftiest development of a fine art like architecture, inferior to no other,—that, notwithstanding the architectural structures erected by those successive peoples who have ruled the Peninsula, were built under precisely the same necessities,—notwithstanding they were raised in the same climate, as shelter from the same heat, or protection from the same weather, and each alike displaying the perfect fulfilment of all those conditions of necessity and utility which, although the prosaic side of the art, are never absent from good architecture,—yet they are so utterly dissimilar in taste, and in the impressions they convey to the spectator,—are so stamped, if I may so say, with the idiosyncracy of the respective people who produced them,—that they scarcely seem the work of people inhabiting the same globe, or at least the same hemisphere;—so much so that when through any circumstances they happen to be placed in immediate juxtaposition (as in the instance of the Alhambra of the Moors, and the Palace of Charles V. of the Castilians, to which I shall have occasion to refer at large) they give an indescribable jar or shock to the taste from their discordant incongruity, though each among the finest examples of their respective styles as developed by a different people. Of the Phœnicians, and their colonists the Carthagenians, and the original Iberians, there are, indeed, no unquestioned works existing. The Torre del Or,—which is one of the characteristic features of Seville, standing near the spot of disembarcation by the visitor who arrives by the Guadalquivir,—a perfectly simple (even rude) octagonal tower,—has been considered the work of the Carthagenians by some, though by others attributed to the Romans; and some portions of the towers of the Alhambra are previous to the Roman time, probably erected by Phœnicians or Carthagenians. Of the Romans, it is certain that they covered the Peninsula with cities, and that at a comparatively late date of the empire. One of these cities,—celebrated as the birthplace of the Emperors Adrian, Theodosius, and Trajan, and the philosopher Seneca,—Italica,—stood a few miles higher up the Guadalquivir than Seville. It presents at this day a heap of disformed and buried ruins, which have been a quarry for the Moors in the erection of Seville, if not for the Christians who succeeded them. The countless small marble columns, about 5 feet in height and 1 foot in diameter, so numerous that they appear like the spontaneous productions of nature rather than the work of men's hands, which one meets with in all positions and circumstances in Seville; sometimes really forming parts of architectural design, but more frequently used for the baser motives of mere utility; and as often not that, but merely embedded in the walls, and thrusting themselves forward in strange places or chambers, to the great detriment and inconvenience of the occupants, were doubtless derived from Italica, and testify to the extensive Roman architectural constructions there. But although the Romans, as I say, covered at least the southern part of the Peninsula with cities, yet very few and imperfect examples of their temples and their civic or domestic architecture now exist: nevertheless, they have left the impress in Spain of their genius and their power in the grandeur of their works,—in those works in which they were truly great,—for the Roman style of architecture, in their temples and civic edifices, was never perfected,—I mean their bridges and aqueducts. In this view Spain may be said to display the architectural genius of the Romans in its most impressive form better than any country of Europe, even than Italy itself; for here the aqueducts and bridges which they erected are on a grander scale. The aqueducts of the Campagna of Rome, which present so striking a feature viewed from St. John Lateran, are comparatively insignificant to those of Spain. One of the noblest of these works of the Romans in Spain is the bridge of Alcantara, built by Trajan. It consists of six arches, the two centre with a span of 110 feet: its length is some 670 feet, and 28 feet wide and 240 feet above the level of the river. The work is simple and majestic, and worthy of the emperor of the world. Another even surpassing these is the great aqueduct of Merida, the grandest in the world: ten arches are nearly perfect: thirty-eight shafts remain, some 90 feet high. They are arched in three tiers, and made of brick and granite. This was only one of many Roman aqueducts in Merida: one crosses the Madrid road, of which only three shafts remain.

The ancient city of Segovia is distinguished by its celebrated aqueduct, as much for the elegance of its form and solid construction as its unalterable preservation and constant use, for it has brought the beautiful water to the inhabitants of Segovia for more than 1,800 years, and still brings it. There is no trace in it of mortar or cement.

Of the architectural works of the Spanish Goths, whose rule in Spain fills up the period from the fall of the Roman empire, in 411, to their own fall upon the advent of the Moors in the year 714, three centuries, there are indeed but few remains, at least south of the Asturias and the Basque Provinces, which alone the Moors never conquered, and from which the tide of conquest was in the course of centuries rolled back. It is probable that the Moors, during the long occupation of their extensive Spanish empire, altered or rebuilt the Christian churches, converting them into their mosques; as the Christians afterwards rebuilt or converted most of their mosques into Christian churches, as in the instances of the cathedrals of Valencia, Granada, Seville, and innumerable others (as partially at Cordova), all built upon the spot, and in most instances occupying the exact area of the mosques that they replaced. Some few vestiges of the Spanish Goths previous to the Moorish occupation are still to be traced at the convent of San Roman, built near Toro, in 674, and in the walls of Toledo, 674; but in the Asturias, to the north, where the Moors never penetrated, there are still existing many works of the Spanish Goths, mostly churches. Though I do not believe that the erection of any of them can be traced to the period prior to the occupation of the southern portion of the Peninsula by the Moors, I believe they were all contemporaneous erections with those of the Moors, widely as they differ from them. These works are characterized by the massive circular piers and the round arches, resembling what we understand by our Early Saxon architecture, as well as a prominent feature, the porch, which was indeed a necessity of the inclement climate of that country. The Spaniards, with more discrimination and correctness than ourselves, call this style of architecture Gothic,—"obras de los Godos," works of Goths; whilst that which we are accustomed to call Pointed Gothic, the birth of a latter age (in which style are most of our cathedrals), they term Tedesco, or Tedesque, and Germanico, being derived (in their case at least) from Germany, with which, in the Middle Ages, they had an intimate communication. These "obras de los Godos" are the oldest Christian churches existing in the Peninsula. The best-preserved specimens are on a lofty hill of red sandstone, called la Cuësta de Naranco, the opposite side of a valley to the north of Oviedo, the capital of the Asturias, where there are several.

The architectural monuments of the Moors then come in succession to those of the Romans throughout the large portion of Spain that they conquered and ruled; for although that country was, for above three hundred years, the kingdom of the Spanish Goths (the interval between the rule of the Romans and the advent of the Moors), yet, as I have said, their buildings have been destroyed or replaced by the Moors.

Of the monuments of Moorish architecture still remaining in the Peninsula, we have more ample and detailed accounts than of any,—at least we have of one of them,—the Alhambra,—in the elaborate work of Mr. Owen Jones, which has made that monument familiar to us. But, elegant and beautiful as it is, it was a work of the decadence of the Moorish architecture. It was erected the last, and not until after the fall of the brilliant empire of Cordova, its superior in arts, in science, and in arms, as well as those of Valencia and Seville. Its foundation was, indeed, the result of the fall of this latter kingdom or pachalic.*

From the accounts drawn from both Arabic and Spanish sources, as well as from those traces, faint indeed, but unmistakable, presented by remain like the Mesquita of Cordova and the Giralda, not the Alcasar of Seville, the Arab architecture had attained a far higher perfection than th Alhambra of Granada would evince. Notwithstanding the mutilations, and, what is worse, t disfiguring additions to the Mesquita of Cordov it is evidence of the surpassing genius of t Moors. Startling from its novelty, and the inven tive powers displayed, it remains one of the mo impressive monuments in Europe. It is indee worthy of a journey to see it;—to form an idea the effect of its naves and transepts, its intersec tions of nineteen longitudinal rows of column with twenty-nine transverse rows, originally 1,20 columns. The labyrinth of these colonnades ove an extent of 2,400 feet is utterly bewildering, it is unequalled. For myself, I must say that never was so impressed with any building, on firs entrance, as the Moorish mosque of Cordova.

The choir, or whatever that portion of the buildin was in the time of the Moors, was unfortunate altered by the bishop and against the judgmen of the corporation, so late as the time of Charles V who in this instance reproved what he himse afterwards did at the Alhambra. "You ha built here what you, or any one, might have buil anywhere else, but you have destroyed what w unique in the world. You have pulled down wha was complete, and you have begun what yo cannot finish."

The alteration is in the Florid Gothic, in it last and expiring form, in the beginning o Charles V.'s reign. It is not undeserving of ad miration in itself, and is less incongruous tha might have been expected with that curiou monument.

The Giralda of Seville, which serves precisel the same office as the Italian campanile, detache as those are from the cathedral, is so notable a architectural monument of the Moors, that it h become the characteristic symbol of the city o Seville, in the same manner as the ugly embry tower and antique crane of the Cathedral o Cologne, which is stamped on the Eau de Colog bottles and other productions of that city. I forms an exquisitely graceful feature, markin the site of the city seen from an immense dis tance when journeying towards it by the Guada quivir, and every minute apparently changing it relative position, sometimes in front, to the right to the left, and at times almost behind, accordin to the winding of the river. The Giralda was th square minaret of the mosque, which the cathe dral has replaced. It was the work of Guever the Moorish inventor of algebra. Though o noble proportions, it was thought too low by th Spaniards, and a belfry, &c., in all 100 feet, wer added to the height. In elegance, in the combi nation of lightness and massiveness, it surpasse all the European towers,—the tower at Venice, &c erected in Italy or elsewhere, at that period. Th Moors themselves justly attached so much im portance to it, that they determined to demolish it upon the fall of the city to St. Ferdinand, bu were only prevented by a threat of general mas sacre. There still exists another tower of th same, or rather larger dimensions, and resemblin it in architectural design, by the same architect Guever, at Marocco, one of the two capitals o Morocco, as I was informed when in Morocco, by Mr. Drummond Hay, the only Englishman wh has been permitted to visit the interior of tha country. It is unfortunate that there have been no drawings made of them, as it would hav furnished us with the true Moorish termi nation of the Giraldæ, replaced by the Spanish work, but which Mr. Hay, not an architect described to me as equally beautiful with th rest. I believe it is four gilt balls of diminishin magnitude. The Alcasar of Seville (from an in scription) was erected after the possession of tha city by the Spaniards (it is said by Moorish workmen brought from Granada). It has been sadly mutilated, and partially altered; but from what remains I cannot help thinking that in it original state it was of a purer taste than th Alhambra. Its remarkable feature is the extra ordinary manner in which its strength and mode of construction are so perfectly concealed that structures requiring great strength and ingenuity and which, in other architectural styles, would consequently present an appearance of ponderosity

* One circumstance alone, although it is descending to minutiæ, bespeaks the inferiority of the Alhambra as an architectural monument to the Mesquita of Cordova and the earlier Moorish works. It is that the ornamentation (which is the prominent feature of the style) is of necessity one of lath and-plaster, which could not be executed in stone. There is the beautiful honeycomb ornament, for instance, which imparts such a charm to the Hall of the Ambassadors, it would be impossible to express in stone. As, also, the essential dependence of this style of ornamentation upon colour, of which a striking illustration may be seen in the archway of the ancient Moorish palace of Bádis, now called the Casa del Carbon, on the Darro, which is as fine as anything in the Alhambra, in fact is identical with the best of it; but, having been whitewashed, it loses more than half its value; whereas the ornamentation of the Mesquita of Cordova, no less charming in taste, is wholly produced in stone cutting, as the beautiful interlaced ribbon ornament, &c.

are here notable for their elegant and airy lightness.

Other works of the Moors, of less extent, and innumerable fragments, standing alone or encased in more recent building (as the Moorish arch), are scattered all over Spain, upon which time will not permit me to dwell; but there is a charming little piece of Moorish architecture at Granada, which I am surprised has been utterly overlooked by our architectural illustrators; and that even Mr. Owen Jones, while he was about the Alhambra, should have missed it. I mean what is now called the Alcaiseria, but was the ancient Zacatin, or shopping street, though the Spaniards have transferred this name to a street of their own erection running at right angles to it. It was actually *the* Zacatin of which the famous old Spanish ballad or cancionero sings, the "Ay de mi Alhama!" It is in the third verse the messenger brings the news of the fall of Alhama:—

"Descavalga de una mula,
Y en un cavallo cavalga,
Por el Zacatin arriba,
Subida se avia al Alhambra,—
Ay de mi! Alhama."

"He quits his mule and mounts his horse,
And through the streets directs his course,
Through the street of Zacatin,
To the Alhambra spurring in,—
Woe is me! Alhama."

It is a little gem of a Burlington Arcade, although not composed of one line only, as this, but of another at right angles, and probably more, for it has been partially destroyed by fire; but enough remains to show one of the most charming specimens of this kind of architectural fabric. I wonder that the French, at least, have not copied it in their numerous arcades, for which it would serve as a beautiful model.

The architectural monuments in Spain in succession to those of the Moors are the Gothic cathedrals (as we should call them, but incorrectly), in which, indeed, Spain is not less rich than this country, or than France. A period of three centuries, from toward the middle of the twelfth century (1150) to the middle of the fifteenth (1450), may be justly called the cathedral-building era of the world; and I think that (of existing cathedrals at least) none will be found that are not included within it. During this period there were, of course, changes of style, from the round arch, and a style (though different) more nearly allied to the Byzantine, to the Pointed, from the Pointed to the far more enriched, and abounding in fantasies and grotesque conceits (as the Flamboyant in France) as it verged to its decline. The middle of this period, about 1300, the early part of the fourteenth century, seems to have been the best, the culminating point. In this country it corresponds with the reign of Edward III. Although all of these cathedrals (commenced at different times during this period) are partially, and should have been wholly, characteristic of the styles of architecture at the respective times of their erection, yet have all of them been so repeatedly added to, changed (or altered, to improve some indeed, and those of the earliest, like Canterbury), so constantly during the whole of the cathedral-building era, that few indeed, or none, present perfect and homogeneous specimens of their respective prevailing styles of the time of erection. This holds good with respect to the Gothic cathedrals of Spain, though, perhaps, to a somewhat less extent.

There are some arrangements in respect to the Spanish Gothic cathedrals which mark them as distinct from the cathedrals of this country, France, or Germany. The great altar is in nearly every instance isolated, the side aisles passing round it, and is placed east of the crucero or transept. The choir (or coro) is on the opposite side of the transept, and is also isolated. Immediately over the crucero, or intersection of the nave and transept, is the cimborio, a compromise between a Gothic octagonal tower and a dome, often of exceeding beauty. The trascoro is the back or outer side of the coro, relieved throughout with chapels. There is generally no gate or opening for entrance to the coro anywhere but by the transept, so that upon entering the western or principal entrance to the cathedral, you have before you the back of the coro, which shuts out of sight the high altar, which for effect would be much better seen upon entering. The rejas, or brass or iron gates and railings which inclose the choirs, altars, and chapel, are of extraordinary and peculiar beauty, and are characteristic of Spanish cathedrals. It was, in the great time, a branch of art of itself; and the rejeros, or ornamental ironworkers, justly figure in the lists of illustrious artists. The most celebrated were Villapando, Dominge de Cespedes, and Anenas of Cuença. Those rejas are of wrought-iron or brass, with forms and figures of the most exquisite designs. Of the Spanish cathedrals, the number of sacristies is a remarkable feature. Besides the principal one for the ordinary service of the church, many of the larger chapels have their own attached. The Spanish cathedrals have also a segrario, or chapel, where the Sacrament is administered and the host kept; often a separate building, like the baptistery was with the Italians. The cathedral has also almost always attached to it the parish church, which sometimes performs the double office of segrario. This of itself, as at Seville, is frequently of imposing dimensions. The retable, the structure which fills the space of the high altar in Spain, is usually of three or four ranges of architecture, one above the other, with columns, entablatures, and other parts ornamented with statues, bas-reliefs, and paintings, the finest works of the school. The cathedrals of Spain have also some distinguishing characteristics amongst themselves in the different provinces. Thus those of Catalonia, for instance, besides the remarkable shortness of the nave and aisles in proportion to the width, giving the church a compressed look, have always the principal entrance, reached by a lofty flight of steps, of circular form, as the cathedrals of Barcelona and Gerona. Of the Spanish Gothic cathedrals some eighty now remain: the collegiate and parish churches may be counted by the thousand.

The finest examples of the purest period of the Gothic will be found in the exquisite cathedral of Leon; in the elegant ones of Palencia, 1321; Oviedo, 1388; the Cathedral, and Sa. Maria del Mar, at Barcelona, 1328; the Cathedral of Taragosa; and the convents of Lupiana, near Guadalajara, 1330, and Guadalupe, 1389. The Transito or Jewish synagogue of Toledo, 1350, is without rival in the world, and presents a matchless *ensemble* of all that Hebrew, and Gothic, and Moorish art could do in juxtaposition.

The finest specimens of stained glass range from 1480 to 1580, and are to be found in the cathedrals of Toledo, Seville, Leon, Burgos, and Barcelona.

The cathedral of Leon, one of the earliest and best specimens of pure Gothic in Spain, of the twelfth century, resembles some of our own of that period; arches nearly in the form of those of Salisbury, but narrower: the trascoro is of alabaster. The cathedrals generally of Catalonia present traces of the style, having been introduced there by the Normans. Tarragona, commenced soon after Leon and Barcelona, one of the finest specimens of the light Gothic, resembling the best specimens of France and England a little later, 1221. The cathedral of Burgos, taken as a whole, interior and exterior, has been considered one of the finest examples of Gothic architecture in the world. It is not surpassed by the cathedrals of France and England, though it has the fault of Spanish cathedrals, of the nave being too blocked up by the coro, and the capella major, or great altar, too encumbered with chapels; making the interior somewhat heavy. Over the crucero, the intersection of the nave and transept, is an octagonal tower or cimborio, of surpassing beauty, and of interest as a rare example of the passage of the Gothic to the Renaissance, which for the most part is decided, presenting scarcely any instances of the mingling of these apparently incompatible styles. There can be no question that it is of much earlier date than that given in our account of the cathedrals,—1560. They told me at the cathedral, that it was a work of the end of the reigns of Ferdinand and Isabella: it is certainly not later than the earliest part of the sixteenth century.

The western façade of Burgos cathedral, surmounted by its two pyramidal spires of open tracery, 1442, is of great celebrity.

But as for the interior, the cathedral of Seville is the finest Gothic construction in Spain, or in the world. It is one of the later cathedrals—date 1400,—which renders it the more singular that its author should be utterly unknown. It is a favourite theme with the Spanish pseudo-poets to address lines to the mystic hands that raised this solemn fane, upon which they look with an awe somewhat akin to that of the wanderers in the desert on the mighty remains of Persepolis or Balbec. This magnificent structure has five naves, of nearly equal breadth. The form approaches a square, the breadth being very great in proportion to the length, and the side aisles are all equal, and nearly of the same height as the centre. The capitals of the columns are of the same elevation throughout, and the piers of similar dimensions to each other. It has thus that element of symmetry which is characteristic of Grecian architecture, and in which the Gothic is generally considered as wanting. From this plan, and the great solidity of the piers, the exterior is wholly without the connecting arches and buttresses, which, in most of our cathedrals, support the inner parts of the fabric, and supply the want of internal strength. The trascoro has a beautiful and costly architectural front of red marble of Moron. It is, however, out of keeping with the architecture of the cathedral.

With the exception of the great western porch, which is fine, and in keeping, the exterior of the cathedral is singularly unfortunate. It is an inextricable jumble of forms, which can scarcely be referred to any style, or it includes all styles,—the beautiful tower of the Giralda representing the Moorish,—and is the more remarkable as the accompaniment of the finest interior in existence. I should mention, that, in the clerestory, there are the most brilliant and finest specimens of painted glass, admirable in itself and its mode of introduction, adding greatly to the marvellous effect of this matchless cathedral.

There are few works remaining in Spain of civil and domestic architecture of the same period as her Gothic cathedrals: in ours there are none. The only ones that occur to me are fragments (of deep interest, indeed, to the architect) of porches or doorways, and sometimes a portion of the façade of the houses of the ancient Spanish nobility (the Ricos Hombres), which may be seen at Toledo, and are indeed in singular contrast with the houses of the Valencian nobles, built in the decline of the art, as I shall have occasion to mention.*

AMERICAN IRON BRIDGES.

INSTITUTION OF CIVIL ENGINEERS.

ON MAY 5, Mr. Hawkshaw, president, in the chair, the paper read was on "American Iron Bridges," by Mr. Zerah Colburn. The great number of timber bridges in America might be accounted for, the writer said, from the fact, that the first cost of the truss, or superstructure, of a timber bridge of any given span, was generally less than one-half that of an iron bridge of the same strength. Iron had been occasionally employed since 1835, but only within the last ten or twelve years to any extent.

Cast-iron tubular arches, including one of 80 feet span, were erected from the design of Major Delafield, about the time when similar arches were adopted, by the late M. Polonceau, in the construction of the Pont du Carrousel, over the Seine. Major Delafield's arched ribs were elliptical in section, the transverse vertical axis being about four times the length of the conjugate axis. In 1858, an aqueduct bridge was erected at Washington, by Captain Meigs, in which the two arched ribs were formed of water-pipes, through which the water flowed. The span of this bridge was 200 feet, the rise being 20 feet. The pipes were circular in section, 4 feet in diameter inside, and 1½ inch thick. This bridge was 28 feet wide over all, and the roadway was of timber, supported on wrought-iron spandrils. The bridge was tested with the arched ribs filled with water, and with a load of 125 lb. per square foot upon the roadway, making the total weight on each rib about 350 tons. The thrust of one-half of this weight upon each abutment would be about 470 tons, corresponding to a strain of 2 tons per square inch of sectional area of iron in the pipes. This strain did not include the pressure of the water in the pipes, which were proved to 300 lb. per square inch. These examples were, so far as the author was aware, the only iron arches yet completed in the United States; and with the exception of a few pivot bridges, and one or two ornamental bridges in the Central Park at New York, they comprised nearly all the cast-iron bridges in that country.

There were a small number of plate, or boiler iron bridges. The first was erected in 1847, in place of a timber bridge, by Mr. Millholland, on the Baltimore and Susquehanna (now the Northern Central) Railroad. This was 50 feet span, and the two girders were each 6 feet deep, the two sides of each being formed of plates ¼ inch thick. Between the sides at the top a timber 12 inches square was bolted as a compression member, and the top was further strengthened by two wrought-iron bars, 5 inches deep by ⅜ inch thick, while four similar bars were riveted along the bottom of each girder. The sides were stiffened by stay-bolts, enclosed in cast-iron distance pieces, 12 inches apart from centre to centre. The centre of each girder was placed exactly

* To be continued.

under the rails, which were spiked to the timber forming the compression member. The breaking strain of the pair of girders was equal to 250 tons of distributed load, and the weight of the bridge was 14 tons. When completed, this bridge was coupled at each end to a railway waggon; and was slung by chains to a temporary timber truss. It was then taken 19 miles by railway, run exactly over the place it was intended to occupy, the existing timber bridge was cut away, and the girder bridge lowered with the permanent way ready for traffic, the whole operation not having caused an interruption of more than two hours.

Having been long accustomed to trussed timber bridges, American engineers, in adopting iron, naturally employed it in trusses also. But, before describing the various forms of iron truss-bridges, the strength of American iron was referred to. It appeared, from a vast number of experiments made by the United States Ordnance Board, that there was but little iron in any American cast guns of a less tensile strength than 11 tons per square inch; and in 1851, the author had himself seen portions cut from 11-inch guns, weighing 6 tons 15 cwt., tested up to 16·14 tons. The transverse breaking strength of a large number of samples of re-melted iron, when reduced to the English standard of a bar 2 inches deep and 1 inch wide, resting on supports 3 feet apart, varied from 27¾ cwt. to 48·1 cwt., the general strength being 34 cwt. The minimum crushing strength of the irons experimented upon was 37¾ tons, and the maximum 77¾ tons. Experiments made by the Franklin Institute twenty-five years ago, showed the mean tensile strength of cast iron at the first smelting to be 9½ tons; and the iron now employed by engineers in Philadelphia bore from 7·14 tons to 10·2 tons. In 1858, Mr. Albert Fink tested the iron used in the construction of a large bridge on the Louisville and Nashville Railroad. When the results were reduced to bars 2 inches deep by 1 inch wide, on supports 3 feet apart, the minimum breaking weight was 29½ cwt., mean 32·68 cwt., maximum 39 cwt. This iron was a mixture of two-fifths cold blast, two-fifths hot blast, and one-fifth scrap. With regard to wrought iron, the experiments made by the United States Board of Ordnance gave a tensile strength varying from 17 tons to 33 3 tons per square inch; and those of the Franklin Institute a mean strength of 26 tons for plate iron. At the present time 27 tons was generally expected of American boiler plate. Other experiments were also quoted to the same effect; and it was remarked that, from what had been stated, American engineers might work up to rather higher strains than were commonly allowed in this country. The high qualities of the best American iron were due to the purity of the ore and of the fuel employed in the manufacture. In bridges of less than 150 feet span, even when loaded with a weight of 1·34 ton per lineal foot of single line, the strains did not exceed 3 57 tons per square inch on wrought iron in tension, and 4·46 tons per square inch on cast iron in compression.

Of the iron truss-bridges that were described, all had certain peculiarities in common, distinguishing them from the trussed structures adopted in this country. In almost every case the compression members of American iron trussed bridges were of cast-iron cylindrical or octagonal pipes. These simply abutted, end to end, against each other; and although means were employed to prevent lateral motions of the ends, flanges and bolts were never introduced for that purpose. Another, and one of the most important peculiarities, was the depth of truss, a depth exceeding that employed by English engineers, except in rare instances, as at Chepstow and at Londonderry. American engineers considered a depth of one-eighth for spans of 200 feet as only moderate: for shorter spans depths of one-seventh and one-sixth were common; and in the case of one bridge of 120 feet clear span, the depth was 23 feet, or nearly one-fifth of the span. It should, however, be observed that, in some of the American trusses, the arrangement of the tension members was such that, if the depth of the truss were not considerable, the diagonals would be inclined at hardly more than 8° or 10° from the horizontal; in which case a very large quantity of material would be employed, in proportion to the supporting power obtained. No American iron or timber bridges were ballasted; nor had they any floor, only a foot-path of planks. In bridges having the rails at or above the level of the top chords, known in the States as "deck bridges," parapets were seldom employed; and the trusses were often so short a distance apart, that a passenger, on looking out of a carriage window, was unable to discover any support beneath the train. In no bridges of two or more spans were the trusses made continuous over a pier; each span being always treated as a bridge by itself.

One of the earliest iron trusses adopted in the States was a trellis, known as Rider's Bridge. Cast-iron T, or angle irons, were employed in compression, and wrought-iron bars in tension. These bridges were so slightly proportioned that they occasionally broke down, and the author was not aware that the plan was now adopted in new structures.

A detailed description was then given of a Murphy-Whipple bridge, having a span of 125 feet, with the railway supported on the lower chords. It was for a double line, and there were three trusses, 14 feet apart, from centre to centre, the strength of the middle one being about one-half greater than that of either of the others. The trusses were 23 feet deep, or 0·184 of the span. The top chord was formed of cylindrical cast-iron pipes, and the bottom chord of a chain of square bars, 10 feet 5 inches in length between the centres of the eyes. Upright cast-iron posts, placed at the same distances apart, divided the truss into panels; and as the posts were in two lengths, they were each trussed by four round rods, to prevent lateral failure. The diagonals were in pairs of square rods, and were formed also as eye-bars, grasping pins 2½ inches diameter in the top chord, where the pipes abutted upon each other, and pins 3½ inches diameter in the bottom chord, thus connecting the links, or bars, of which it was composed. The diagonal tension bars only crossed each other in two panels on each side of the centre of the truss. The top and bottom chords were placed horizontally, with transverse and diagonal bars. The railway bars were supported upon longitudinal timbers, which rested upon transverse wrought-iron rolled beams. The total weight of the superstructure complete was 102½ tons, or 8 cwt. per foot of single line. With an additional distributed load of 3,000 lb. per lineal foot on each line, the tensile strain at the middle tension rods would be 4·27 tons per square inch in the middle truss, and 3·12 tons per square inch in the outer trusses; but, with a train on a single line only, the ordinary working strains did not exceed 2½ tons per square inch in tension, nor 3 tons in compression.

In 1861, an iron bridge was erected on the line of the Pennsylvania Central Railroad, across the Schuylkill at Philadelphia. It had two clear spans of 192 feet each, and one pivot span, or turning bridge, 192 feet long. The construction was similar to that just described, but the truss was only 19 feet deep. The upright posts, or struts, were of wrought-iron, so rolled that when two bars were put together they formed an octagonal tube. The top and bottom chords of the turning bridge were of wrought-iron rolled beams, so that either might resist extension or compression. The three spans for a single line contained an average of 5 cwt. of wrought-iron, and 7¼ cwt. of cast-iron per lineal foot. The nett cost of the bridge, exclusive of masonry, was 8,144*l.* 10s., or 14*l.* 4s. per lineal foot; the wrought-iron costing 22*l.* 15s. 6d., and the cast-iron 6*l.* 11s. 3d. per ton.

The pivot was of a kind extensively employed for turn-tables. It consisted of a fixed and of a moveable cast-iron disc, both grooved to receive a number of steel rollers, each turned to the frustra of a double cone. A circular railway was laid around the pivot, but the wheels only bore upon it, when the bridge was not truly balanced on the rollers. With a load of 14 tons balanced upon one of these bearings, the whole was revolved by a weight of 3½ lb. hung over a pulley, and connected by a cord to the periphery of the turn-table.

The form of truss introduced by Mr. Wendel Bollman was next noticed. In it the load upon each panel was transferred directly to the ends of the truss, through a pair of straight suspension bars, doing duty only in that panel. With the exception of one pair of suspension bars, supporting the centre of the bridge, the bars in each pair were of unequal length, and their lower ends were attached to the upper extremity of a compensating link, in order to allow for contraction and expansion. This bridge could not alter its form under unequal loading. A bridge upon this plan at Harper's Ferry, on the Baltimore and Ohio Railroad, has four parallel trusses for a double line, and a clear span of 124 feet. The span was divided into eight panels, and the depth of the truss was 17 feet 6 inches. The top chords were each formed of a single line of octagonal cast-iron pipes, and the vertical posts were also of cast-iron. The strains upon the various parts of the truss, caused by the weight of the bridge and of a load of 1½ ton per lineal foot, were 2·8 tons per square inch in compression in the top chord, and varied from 4·46 tons per square inch in tension in the longer suspension bars to 7·14 tons in the shorter bars. Mr. Bollman had stated, that this bridge was tested with a moving weight of 122 tons of locomotives on one span of single line, or nearly 1 ton per lineal foot, and that the deflection at a speed of 8 miles an hour was 1⅛ inch at the centre.

The iron bridge designed by Mr. Albert Fink had been more extensively adopted than any other on the railways of the United States. In this bridge a pair of diagonal tension bars connected the foot of the principal strut or king-post in each truss, with the ends of the top chord. This pair of diagonal bars supported one half of the whole weight of the truss and its load. Each half span was subdivided by a strut, and two diagonal tension bars extended, one to the nearest end of the top chord, and the other to the top of the centre post. Each quarter span was again subdivided into eighths, and these again, for spans greater than 100 feet, into sixteenths. Under the direction of Mr. B. H. Latrobe, then engineer of the Baltimore and Ohio Railroad, in 1852 Mr. Fink erected an iron bridge of three spans, each of 205 feet, where that line crossed the Monongahela river. The depth of the truss was about one-ninth of the span, and the railway was carried at a little above the level of the bottom of the truss. The weight of the bridge, including the permanent way, was only half a ton per foot of single line, and with an additional load of one ton per lineal foot, the tensile strains upon the wrought iron did not exceed 0 15 tons per square inch, and the compression on the cast iron 4 25 tons. The Green River and the Barren River Bridges were then alluded to as being nearly identical in construction to that last described.

The Bollman and the Fink trusses for a single line, and in spans of from 160 feet to 200 feet, cost 14*l.* per lineal foot, or nearly 28*l.* per ton; while timber bridges of the same span only cost from 5*l.* to 7*l.* per foot. Still, iron bridges now met with an amount of favour which appeared certain to insure their ultimate substitution for timber bridges. A gradual preference was being shown to the plate girder, as the great annual change of temperature, from 20 deg. below zero to a reflected heat of 130 deg. in the summer sun, was not favourable to the use of cast iron in structures of such importance as railway bridges.

NEWSPAPER STEREOTYPING.

FEW persons would suppose, remembering the rapidity with which a daily paper is composed and printed, that the "forms" could be stereotyped. Yet, so it is, and for the sake of that very rapidity. The *Engineer* gives some particulars of the mode pursued in respect of the *Times*. The pages are set up with types in the ordinary manner, and from these a *paper* matrix is obtained by pressure. The paper intended to receive the indentation or intaglio of these forms is prepared as follows:—Beginning with a sheet of very thin and fine but strong paper, known variously as bank-post or silver tissue, a sheet of brown paper and two or more sheets of blotting paper are successively pasted one over the other upon one side of the tissue. The opposite or face side of the tissue is dusted with powdered French chalk. The form of type is first warmed in a steam oven; and then, when taken out and laid flat, the plastic paper web, prepared for impression, and still damp with paste, is placed upon it and the whole passed beneath a weighted roller. The impression is as perfect as if it had been made in the finest wax. The paper comes from the types without the least wrinkle and without cutting or tearing at the edges of any one of the thousands of impressions with which it is covered. The sheet, too, is nearly dried and is ready for the moulding frame. As it is not so stiff but that it may be readily bent, the paper is now made to assume the curve corresponding to the cylinders, 64 inches in diameter, of the Applegath presses and those made upon Hoe's plan by Mr. Whitworth. The paper mould is held between an iron back and a block of fire-clay, curved upon its face, and in this position the type metal may be poured and a stereotype plate produced in a few seconds, and perfect, with the exception of trimming the edges and planing the back, which operations are accomplished in a few minutes more. The paper mould is not burnt by the contact of the melted type metal, which fuses at a comparatively low temperature. A slight discoloration and the least smell of burning are the extent of the injur

to the mould, which, indeed, is good for a dozen or more casts, and may then be filed, if required, and preserved for years to be again cast from at any time. The sixteen pages of the *Times*, including its double supplement, are thus stereotyped between four o'clock and 4·40 every morning, the average time of making and finishing each plate being two minutes and a-half. Instead of printing off a whole edition from a single form of type, as many like impressions may be obtained at one and the same time as there are presses for the work.

THE PUGIN MEMORIAL.

THE Pugin Memorial Committee have signified their intention of placing the sum of 1,000*l.*, collected by them, at the disposal of the Institute of Architects, in trust, for the establishment of a students' travelling fund, under certain conditions.

THE BIRMINGHAM SEWAGE QUESTION.

AT a quarterly meeting of the Town Council, a petition to Parliament, praying for power to dispose of the sewage of the borough in such a manner as to relieve the corporation of difficulties, was submitted to the council for approval. Mr. Walker, in moving that the seal of the corporation be attached to the petition, and that it be sent to Mr. Scholefield, M.P., for presentation, remarked that not only was a very large quantity of sewage of great value entirely wasted under the present system, but it was a great nuisance, and endangered the lives of the people. A large sum of money had been expended on the works at the outlet; but without additional powers from Parliament the manure could not be conveyed to the farmers, who were willing to pay a good price for it. Mr. Wiggin moved, as an amendment,—"That the Public Works Committee be authorised and instructed to apply a quantity not exceeding five acres of the land belonging to the corporation, at the outlet of the main sewers at Saltley, in such manner as in their judgment will most satisfactorily demonstrate the agricultural value of the liquid sewage, which flows over the weirs of the subsiding tanks into the Tame, in the production of root, grass, and such other crops as they may think fit to select; and for that purpose that the committee be empowered to lay out such land in a proper manner for irrigation by such liquid sewage, and make use of such quantities thereof for the purposes of such irrigation as they may think fit, and report to the council thereon." The petition, however, was finally approved of.

The Public Works Committee recommended that the Finance, Rate, and Appeal Committee be authorised and instructed to negotiate for a loan of 30,000*l.*, under the "Birmingham Improvement Act, 1861:" 26,000*l.* of this money it was proposed to expend on sewage contracts, repairs, and other works already ordered; and the remainder would be partly expended in the construction of tramway and carriage-drive, and the remainder—should there be any left—in paving those footpaths in the town where the owners of property were willing to bear half the expense. The report continued:—"The attention of your committee continues to be anxiously directed to the operation of the sewage works at the outlet. Further arrangements, however, are required, in order to make the works as perfect as possible. Among other things, it may be observed that the rapid accumulation of the intercepted matter removed from the subsiding pits renders it necessary that the construction of shedding for drying it, and a siding from the Midland Railway to the works, should be immediately commenced, upon which to remove it with greater rapidity, and at the same time to afford to the landowners and occupiers in the vicinity of the railway greater facilities for availing themselves of this valuable manure; and your committee propose to have the works completed immediately the council has authorised the raising the loan previously referred to."

Alderman J. H. Cutler urged the Council not to proceed with so many miles of sewerage until they saw what the Government intended to do to help them out of the dilemma into which they had got them.—Mr. Wiggin said it had become absolutely necessary that the sewerage should be proceeded with. The Council were now depositing ninety tons of solid matter into the sewers per day, and there was no means of getting rid of it.—Mr. Cornforth remarked that the economy of this country in the matter of sewage was very defective. In China there was a different and a better system, and the Americans were improving. In Paris, matter was not thrown from the water-closets into the sewers, but was put into ingeniously constructed tubs, (?) from which it was removed forthwith to the farmer, who paid ready cash for it. He read a paragraph from a report of the Registrar-General of Births and Deaths, in which it was remarked that fevers were now being propagated by the air and water proceeding from the excrement deposited in sewers and cesspools in large cities, and that those ravages would be reduced effectively if that matter was used in cultivating soil, which was so much needed.—The motion for negotiating the loan was put and carried.

The Public Works Committee recommended that, in consideration of the very efficient manner in which the Borough Surveyor discharged the important duties of his office, and of the increased responsibility and labour of these duties with great satisfaction, his salary be increased from 400*l.* to 500*l.* per annum. This motion also was ultimately agreed to.

WALLASEY WATER WORKS, CHESHIRE.

AT a monthly meeting of the Local Board of Health, Wallasey, the Chairman of the Water and Gas Committee reported that the well for the supply of the district with water had been finished, and was a complete success. This well has been sunk under peculiar circumstances, on the margin of the Great Float. Wallasey Pool occupied the site of a valley line trending inland on the Cheshire shore of the river Mersey. There is little doubt but that in some former geological period, a river course had scoured the channel of the Wallasey Pool down to the rock, just as the bed of the river Mersey, opposite the Seacombe shore, is now, at this present day, bared to the rock, by the strong scour of the tides. Progressive changes have allowed of the bed of the former Wallasey Pool silting up until, at this present, there is a thickness of marl, in some parts, upwards of a hundred feet in vertical depth. This marl rests on a bed of sand, which sand rests on the new red sandstone rock. The several borings show that the sand is not an even parallel bed, but that it probably resembles the sand hills and sand banks forming the shores and estuary of the river Mersey at this day,—a series of sand hills, plains, mounds, and banks, submerged and covered by silt and strong marl, containing many erratic blocks, boulders of limestone, whinstone, and granite. The red-sandstone rock is full of fresh water of singular purity, enclosed by the vast covering of marl named. At several points in the parish of Wallasey there are springs: one, well known, issues in the shore at New Brighton, opposite the Black Rock Battery, betwixt high and low water line, each tide covering it. But, nevertheless, the water of the spring, when the salt water of the sea leaves it, issues bright, fresh, and soft. The well, now finished, was commenced by Mr. Rawlinson, C.E., to reach the rock, and tap this vast reservoir of pure water. A portion of land, situate on the margin of the Great Float, (Wallasey Pool) was selected, being "waste land," and claimed by the Local Board, on which to place Gas Works and Water Works. A well was commenced, and had to be abandoned because the ground had been so broken by pumping quicksand, that the engineer did not deem it safe further to tamper with it.

The site of the well is some 20 feet above high-water level of the sea; and now that a well has been completed, the fresh water rises to some 16 feet above the level of the sea. The quicksand and rock have been reached at a depth of 94 feet from the surface, so that there is a pressure of water from beneath the marl covering nearly equal to a head of 80 feet, or approaching 40lb. pressure on the square inch. When the first well had been formed through the marl, 80 feet thick, to the quicksand, the rush of water was so powerful that a solution of silt and sand alone could be pumped.

The second well has been sunk by Mr. Tilly, of Enfield, using 7-feet cast-iron cylinders. The cylinders have been sunk down to the rock, with the water in the well, *without pumping*. An inner cylinder, with a strong cast-iron bottom, having a socket 2 feet diameter, was lowered to the bottom, and the joint made good by a diver working under 80 feet head of water. Boring tools were then worked through the 2-feet socket-hole, and a lining or guide-tube driven tight into the true rock, 10 feet deep, so as to shut out the solution of silt and sand. The boring into the true rock has been continued to a depth of 150 feet from the bottom of the cast-iron cylinders, or 250 feet from the surface. The water now rises up the bore-pipe soft, pure, and sparkling, of 5½ deg. of hardness only, and may be pumped at a rate of 500,000 gallons per day with the existing pumps. The yield of the well is, however, above 1,000,000 gallons of water per day. The boring tools have opened up a natural fissure in the rock of unknown capacity and depth.

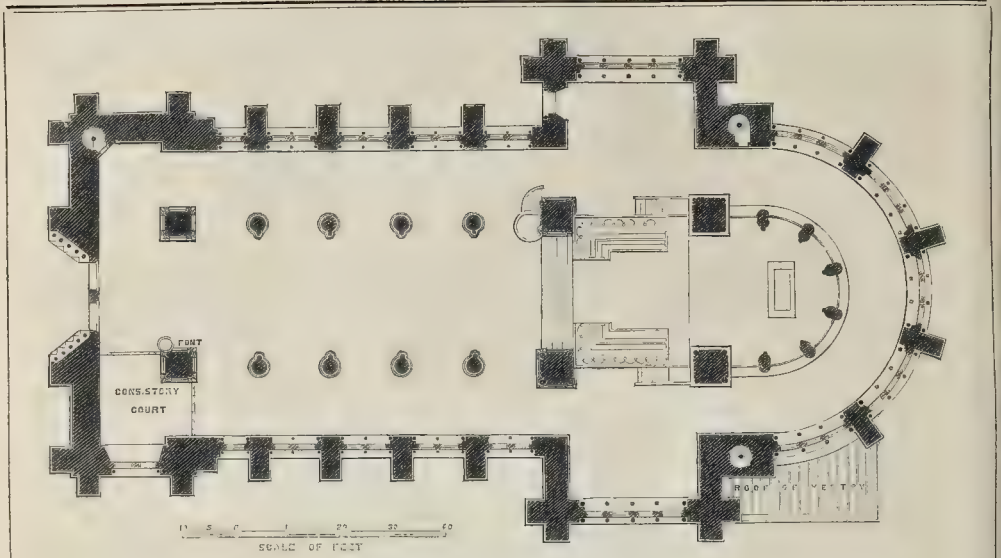
Few wells have been executed under greater natural difficulties than this at Wallasey. Many predictions stated that it never would be completed; and even the week before its completion, the report was current in the district that the engineer had determined to abandon it.

COMPETITIONS.

Borrap Estate, Ripon.—In answer to advertisements in the *Builder*, thirteen designs were submitted by architects for laying out the above estate for building purposes. The design of Mr. T. C. Sorby has been accepted as suited to the requirements of the locality.

Monaghan Lunatic Asylum.—SIR,—My attention having been called to a letter in your publication of the 2nd inst., signed "Alpha," on the subject of the competition for plans for the new lunatic asylum about to be erected for the counties of Monaghan and Cavan, I beg your insertion of a few words in reply to the concluding paragraph, for the information of the writer, and of such architects as may have had doubts on the subject. The committee propose to pay to the architect who may be employed to carry out the works the *usual commission*; but they wish it remembered that, according to the terms of their advertisement, if the designer of the plan approved of be so employed, no premium will be paid to him.

HARRY ROGERS, Secretary to Committee.



ELECTRO-TELEGRAPHIC PROGRESS.

TWO projects, it is said, are in the field for connecting Australia with Java. It is proposed to lay the cable on the north-west of Australia, on the shores of the Gulf of Carpentaria, or to take it round to Brisbane, the capital of Queensland. At this point the cable would be in communication with the existing intercolonial lines, and New South Wales, Victoria, and South Australia would thus be brought into connexion with the countries of the old world. The cost of laying the line from Java to Queensland is estimated at 1,100,000*l.*; but from Java to the north-west a cable could be laid for 243,000*l.*

The *Moniteur* publishes the following notification: "An international conference has just been opened in Paris, at the Ministry of Foreign Affairs, for the purpose of examining a project for a telegraphic line intended to connect Europe with the American continent. It is proposed that the submarine cable shall cross the ocean from the Cape Verd Islands to Brazil, and be continued thence by the West India Islands to North America. The powers most immediately interested in the success of this undertaking have promptly given in their adhesion to the views of the Emperor's Government."

The following account of an extraordinary French telegraphic invention is given by the Paris correspondent of the *Star*: "The Abbé Cassell's pantelegraph is taken up by the Government. A 'project of a law' was recently presented to the Corps Législatif, which proposes that it should supersede the Morse apparatus now in universal use. The pantelegraph is one of the greatest scientific wonders of the present day. It is properly enough termed here an autograph and automateur. A despatch written at Paris is reproduced without the assistance of any clerk at Marseilles with the most rigorous fidelity, as is also a portrait, sketch, or drawing of any kind. Nor does the Casselli apparatus need so great a supply of electricity as that of Morse, and is much less affected by the condition of the atmosphere. The Empress has lately had her likeness telegraphed to some of her friends in the provinces; and, last week, Casselli telegraphed a painting of a full-blown rose from the Observatory to the bureau of the telegraphic administration. The petals were of a beatiful pink colour, and the leaves of an equally good green; in short, were exactly like the tints of the original. Rossini, also, not many days ago, telegraphed to Marseilles, by this apparatus, a melody which he improvised in honour of the inventor, and which has since gone the rounds of the Paris saloons."

This account almost savours of the alleged wonders of the spirit-rappers, with their "spirit-flowers" and "spirit photographs," rather than of the actual workings of electric telegraphs. Instead of "wonders" ever "ceasing," they are ever increasing, in this age of wonders.

CATHEDRAL OF ST. FINN BARR, CORK.—*Plan.*

PROPOSED CATHEDRAL OF ST. FINN BARR, CORK.

OUR readers will remember that in a recent competition with reference to the proposed new cathedral in Cork, a design by Mr. Burges was selected. We have engraved an interior view of the design, and shall make the architect's proposition best understood by printing the pith of the remarks he submitted with it to the committee.

The sum placed at the disposal of the designer being comparatively small, when viewed in relation with the object to be attained, viz., the construction of a cathedral; he thought it desirable to ascertain, in the first place, what are the most essential differences between a cathedral and a large parish church; which latter, in the present instance, would be out of place; inasmuch as the proposed building is to receive a bishop, dean, and chapter.

If we examine any number of old cathedrals, we shall find that, however much they may differ among themselves as regards size and ornament, they, for the most part, present us with transepts, with the triple division of arcade, triforium, and clerestory, and with more than one tower. It is very true that these towers may not always be built, but the preparation for them is generally to be discovered.

In applying these characteristics to the present building, some considerable difficulty occurred, both on account of the limited nature of the site and still more on account of the small sum to be expended.

A short and simple plan was therefore adopted, consisting of nave, aisles, and transepts, together with an apsidal choir and ambulatory; the advantage of the latter arrangement being, that it causes the shortness of the building to be less apparent, while, at the same time, it affords additional accommodation in case of need.

The plan being thus restricted, but at the same time possessing the distinctive features of a cathedral, the next object was to obtain as much dignity as possible consistent with the outlay. This he thought to effect by making the architecture exceedingly plain and simple, and, at the same time, finishing the walls, which possess the requisite divisions of arcade, triforium, and clerestory, with a boarded wooden roof. Stone quadripartite groining would be out of the question, both on account of its cost and of the diminution in height in the interior, for it requires a wooden roof over it to protect it from the weather, and thereby causes the loss of height. It is generally objected to open wooden roofs, that, unless made of very thick materials and double boarded, they are apt to render the building very hot in summer and very cold in winter. This, in the design, is avoided by boarding to the inner line of the timbers, and thereby obtaining a ventilating chamber between the interior and exterior of the building.

The aisles are shown as vaulted, with a barrel stone roof; but the span is very small and the roof above very slight. However, it would be quite possible to use timber alone, if the funds required it.

From the position of the proposed building, on the top of a hill, where it would be seen from the whole town, it becomes a matter of necessity to have three spires, as well as to carry off the height and shortness of the building itself. Of course it it would be impossible to execute these and the church for the 15,000*l.*; and they must, therefore, necessarily be left to the piety of future generations; at the same time, two or more low towers would only impoverish the building, without any corresponding effect.

A vestry has been provided on the southern side of the ambulatory, and a chapter-house under the south tower. The figures on the jambs of the west door represent the five wise and five foolish virgins: on the tympan is the general resurrection; above, at the angles of the rose-window, the four evangelical symbols; and in the great gable, our Blessed Saviour. These are the only sculptured figures in the building. The principal material proposed to be employed is the red local stone for the mass of the walls; the doorways being hard Bath stone, except in the case of the central tower piers, which, on account of the weight, would require to be executed in Portland or some other hard stone.

In conclusion, the author considered that the body of the church could be executed for 15,000*l.*, and acted upon the principle that it would be better to wait for the towers, than, by attempting too much, to erect a building which would be unworthy of the position occupied in Cork by the Established Church.

THE ARCHITECTURAL ASSOCIATION.

THE annual special business meeting of the members of this Association was held on Friday, the 1st inst., at the House in Conduit-street. The chair was taken by the president, Mr. Thomas Blashill.

The following gentlemen were, on ballot, elected members of the Association:—Mr. F. H. Fowler, 32, Fleet-street; Mr. C. Browne, 18, Spencer-street, Canonbury; Mr. C. Hatfield, 49, Cambridge-street, Pimlico; Mr. J. T. Nightengale, 5, Marlborough-terrace, Kennington; and Mr. B. B. Perress, Anderson-street, Chelsea.

A letter was read from the hon. sec. of the Architectural Alliance, requesting that the names of the gentlemen who might be deputed to act as delegates from the Association at the annual meeting to be held in London in July might be forwarded by the 29th inst.

A brief discussion ensued, with reference more particularly to the position of the delegates with respect to one of the principal questions to be discussed at the approaching meeting of the Alliance; namely, the propriety of adopting a scale of professional charges, in the course of which the president and Mr. T. Roger Smith said that the delegates would not have any power to pledge the Association to any proposition that might be made on the subject, and that the understanding was that each association forming the Alliance might adopt or reject any scale of charge that might be recommended. Ultimately the question of choosing delegates was referred to the next meeting.

On the motion of Mr. T. R. Smith, certain amendments were made in the rules of the Association, the effect of which was, that in future (except on special occasions otherwise provided for) all questions submitted to general meetings of the Association be decided by a show of hands of those present, and that the use of proxies be not permitted. In the election of officers, however, proxies may be used.

The next question discussed had reference to the best hour for meeting. Mr. Adams proposed that the time should be changed from eight o'clock to half-past seven, contending that the members did not at present attend with sufficient punctuality to admit of the president taking the chair, and that the period usually left for discussion after the paper of the evening had been read, was far too short.

Mr. C. H. F. Lewes supported this view.

Mr. H. A. Reeves, Mr. Paraire, Mr. Wimbridge, and other gentlemen, on the contrary, contended that it would not be prudent to depart from the usual hour for assembling among all scientific, literary, and artistic societies; and that if it were known that in future the chair would be taken at eight o'clock precisely, the attendance of members would be more punctual. It was also urged that an earlier hour for meeting would interfere with the modelling class, which also met on Friday evenings.

Eventually a show of hands was taken, when the motion to substitute half-past seven for eight o'clock was lost, the numbers being,—ayes 20, noes, 21.

Some other matters of a routine character having been disposed of,

Mr. C. J. Adams announced that the next subject for the Class of Design would be a choir or chancel screen; and that at the meeting on the 15th instant, Mr. F. A. Skidmore would read the second part of his paper on Metal Work.

CATHEDRAL OF ST. FINN BARR, CORK.—INTERIOR, LOOKING EAST.

SELECTED DESIGN: BY MR. W. BURGES, ARCHITECT.

ARCHÆOLOGICAL INSTITUTE.

THE official paper in reference to the meeting at Rochester on the 28th of July next says:—

Rochester presents a centre of archæological attraction not only in the cathedral and noble castle, or in minor objects—the remains of the city walls, ancient dwellings of picturesque or historical interest, the remains of the house of the Templars at Strood, and of Gundulph's Hospital at Chatham, but also numerous ancient architectural examples, ecclesiastical, castellated, and domestic, of remarkable interest, advantageously accessible on such an occasion. The following may be particularly mentioned:—The ancient stronghold of the Cobham family at Cowling; Cobham Church, with its fine series of sepulchral brasses; the noble gallery of paintings at Cobham Hall; the supposed remains of Saxon architecture at Dartford Church; the churches of Cliffe, Darenth, Stone, and Farningham; Boxley Abbey; Malling Abbey; Maidstone, with its fine church, museum, and numerous objects in the vicinity; the remarkable examples, moreover, of military architecture—the mote at Ightham; Leeds Castle; Allington Castle; Old Soar; and Knole, with its celebrated assemblage of historical portraits. To those who investigate traces of Roman occupation, the extensive potteries in the Upchurch Marshes, near Rochester, present a subject of interesting inquiry. Amongst remains of a still earlier age may be cited, Kits Coty House, the most curious primeval monument in the south-eastern parts of England; and the fallen cromlech at Addington; the semicircle of stones and chamber at Coldrum. Of these localities many may be included in the scheme of general excursions now in preparation; whilst others, comparatively difficult of access, may be available to parties of the mere keen votaries of archæology. Mr. Roach Smith has, with much kindness, offered his services as a guide, in the event of a special party being formed to visit either Coldrum or the Upchurch Potteries.

The architectural history of the cathedral and conventual buildings has been undertaken by Professor Willis. The grand example of military architecture, Rochester Castle, will present a subject of unusual importance to the Rev. C. H. Hartshorne. The Rev. J. Earle, late A. Sax. Professor, Oxford, will give a dissertation on the archæology of Kentish local names: a memoir on certain examples of painted glass in Kent, has been promised by Mr. Winston; and the subject of sepulchral brasses, of which Kent presents an unequalled series, will be brought before the meeting by Mr. J. G. Waller.

PROTESTANT CHURCH OF MONTPELLIER, COMPETITION.

MORE than one English competitor complains of the treatment received. Letters asking for information, and addressed to the clergyman, have been returned. We have just now learnt accidentally that the award is as follows. Considering that, on the recommendation of Mr. C. Daly, of Paris, we placed the terms of the competition prominently before our readers, we might have expected an official intimation of the result:—

First premium, W. Bouwens, Paris; second, F. Estibot, Lyons; third, Albert Claris, Paris.

Honourable mention: first, A. Gouttès, Montpellier; second, X. P. Arribat, Montpellier; third, André Marcel Bourdillon, Geneva.

CERAMIC DECORATION OF BUILDINGS.

THE suggestion and offer made a few weeks ago by Mr. Beresford Hope, with reference to the Wedgwood Memorial Institute, will be remembered by our readers. The committee have now received donations of the value of 25*l.*, 15*l.*, 10*l.*, and 5*l.* respectively, from that gentleman, Mr. J. E. Heathcote, Mr. J. Edge, and the Rev. Dr. Armstrong, to be offered as prizes to architects or other artists who shall in competition produce the best designs for the ceramic treatment and decoration of the block façade of the Institute, which is to be constructed according to the accepted designs of Mr. G. B. Nichols. This competition has accordingly been resolved upon, not only with the view of enhancing the beauty of the structure itself, but also with the object of creating a systematic interest in ceramic architecture in its artistic and its practical aspects, by directing the attention both of artists and manufacturers to the subject. The committee have appointed Mr. Hope, Mr. M. D. Wyatt, and Mr. J. C. Robinson judges, who have issued the terms of the competition. These may be obtained at No. 9, Conduit-street. The designs are to be sent in by the 2nd of November next.

SCHOOLS OF ART.

The Ipswich School.—The annual distribution of prizes at this institution took place at the School, Northgate-street. The Rev. C. H. Gaye, the chairman of the committee of the school, presided. There was a numerous attendance of ladies and gentlemen. The chairman, in opening the meeting, said he was glad to be able to state that the pupils had this year maintained the credit which they had gained in former years, the number of medals and prizes being about the same as heretofore. Mr. G. C. E. Bacon said the committee were very glad that they were able on this, as on previous occasions, to issue a report of a very satisfactory character. The inspector had reported very favourably of the improvement he had observed in drawing, and spoke highly of the steady progress the boys in the several schools had made, which was owing entirely to the exertions of their master, Mr. Griffiths. Last year there were fourteen medals, and on this occasion only twelve; but the number of prizes, he believed, was greater this year. The authorities of the South Kensington Museum had discovered that they could not be so lavish in the distribution of prizes as heretofore; and the number of prizes having been reduced, it would be more creditable to those who should hereafter obtain them.

The Kidderminster School.—This institution has now been in existence thirteen months, and is gradually working its way in the estimation of the inhabitants. The number of students now is ninety, out of whom twenty-five are designers or those engaged in various designing shops. Pupils of the school continue to be engaged by the designers in the town, and thus another means of obtaining a respectable livelihood has been opened to youths whose talents lie in this direction. Mr. Kennedy, the principal master of the school, has been delivering a lecture "On the True Principles of the Art of Design as applied to Textile Fabrics;" in which he pointed out the bad taste displayed in the naturalistic treatment of flowers, foliage, &c., in designs for carpets, and advocated strongly the use of abstract forms and conventional treatment, geometrical and symmetrical. He also explained the principles of decoration taught in the Government School of Art.

MEMS. FROM HOUSE OF COMMONS.

The Vacant Plot of Ground at Carlton Gardens.—Sir M. Peto said that, as his name had been mentioned in a question put on this subject, he wished to say that he had not preferred this particular site in any way, and that he had gone to the officer of the department to say that he did not require it, and that the disappointed parties were welcome to it at the price which he had paid for it. Sir J. Shelley said his hon. friend had misunderstood the object with which he put the question. In these days, when they were looking everywhere for an eligible site for public offices, he thought that such a site as Carlton-house-rise ought not to be disposed of by private contract, or for any less price than the utmost which the public would give for that purpose. He was glad to hear that his hon. friend, who was a good judge of the value, had given a full price for it; but he believed it would have fetched a larger price had it been generally known to be in the market. He hoped that by putting the question he should not be understood as implying that his hon. friend was in any way to blame. The rent has been stated to be 1,400*l.* per annum for about three-quarters of an acre.

The Exhibition Building.—Lord R. Cecil asked the Chancellor of the Exchequer whether the report was true that the Government had offered or intended to become purchasers of the building in which the Exhibition of 1862 was contained. The Chancellor of the Exchequer said he had been questioned upon the subject a few weeks since, when he gave the best answer he was then able to give. He was not now able to make any further statement upon the subject, but he could assure the noble lord that if the Government should offer or intend to become purchasers of the Exhibition Building they would give the earliest information in their power to the House; and in case they should intend any step requiring a vote of money they would take care to lay an estimate before the House at an early period, and bring the matter under discussion in the manner which might be thought most convenient.

Public Buildings.—Mr. B. Cochrane gave notice that on an early day he should move that, for the sake of obtaining greater unity of design in our public buildings, and with a view to the efficiency and economy of the public service, it is desirable a permanent Commissioner of Public Works and Buildings should be added to the present Board of Works.

SCHOOL-BUILDING NEWS.

Lowestoft.—Contracts have been entered into with Messrs. George Rix & George Parker for the erection of Congregational Sunday school-rooms, from designs and plans prepared by Mr. W. Oldham Chambers, of this town, architect. The building, which will be of an ornamental character, in the Italian style of architecture, with two campaniles, will be in the rear of the present chapel, and front Nelson-street.

Cannock (*Staffordshire*). — New schools at Hednesford, on the summit of one of the highest of the Cannock Chase hills, have been opened. The buildings are of red brick, with bands of white and blue bricks, and include a house for the master. The large room is adapted for service, pending the erection of a church, which it is to be hoped may shortly be erected. The Marquis of Anglesey has given the site of the schools, which forms only part of a grant of five acres from that nobleman, for the erection of a church, parsonage, and schools. The schools have been erected by Mr. Tomlinson, of Cannock, after the designs of Mr. Samuel Johnson, of Wolverhampton, at a cost of 800*l.*

Broadwas (*Worcestershire*).—The new school building just erected in this parish has been opened. It is built on a piece of land nearly opposite to the rectory; and, though plain and unpretending in its architectural features, it will give accommodation sufficient to meet the requirements of the parish. It is in the Gothic style, and is built of party-coloured brick, with Bath stone dressings. The roof is high-pitched, and is covered with black and red Broseley tiles, worked out in design. On the south front there is a small bell turret. The school-room will accommodate fifty scholars of both sexes. The design was furnished by Mr. A. E. Perkins, of Worcester, architect; and the building contract was carried out by Mr. John Ballard, of Martley, builder. The cost is estimated at 370*l.*

CHURCH-BUILDING NEWS.

Frampton (*Lincolnshire*).—The foundation of a new district church in the parish of Frampton, has been laid by Mrs. Tunnard. The site is in a field beside the road leading from the Kirton turnpike to Kirton Holme. The edifice will consist of a nave, chancel, south porch, and a vestry on the north side of the chancel. The external of the walls will be stone, but the internal red bricks. The work is being executed by Mr. White, of Alford, builder. Mr. Fowler, of Louth, is the architect.

Doncaster.—The chancel and new organ at Christ Church have been opened. The architect employed was Mr. Arnold. The chancel is composed of two bays, forming side aisles. The capitals of the columns show considerable foliated work, carved by Mr. Athron. Mexborough stone has been used for the shafts of the columns, and the caps, bases, and arch mouldings are from the quarries at Brodsworth. The arch mouldings of the octagonal columns by which the chancel is divided afford an aisle on either side. The carving of the capitals represents the maple, thorn, and nut leaves; wheat-ears, buttercups, and flowers being also distinguishable in many places. The roof is an open one; and in carrying out the Gothic design, says our authority, the local *Gazette*, Mr. Arnold had great difficulty to get weight, so essential on roofs of that kind, but he overcame it by the addition of a second plate for the springing of the roof, and in this manner bringing down the ends of the rafters to their proper position, finished with a small embattled cornice. The wood is St. Petersburg red deal, stained and varnished. The roof of the former chancel was flat and divided into panels. The seats placed in the chancel are of oak, and cut by Mr. Ruddle, of Peterborough. The new organ was built by Herr Schulze, who made the instrument in the parish church. It is much smaller than the parish church organ. There are 22 sounding stops, 3 manuals, and a pedal key board. The case is of oak, Gothic in design (by Mr. Arnold), made by Mr. Ruddle, of Peterborough. It shows a great variety of ornament. The front

pipes are diapered, the larger ones having different texts of Scripture worked in the designs. The cost of the screen is estimated at 42*l.*: the organ will cost about 300*l.*, independent of the old organ given in exchange, and without the price of the case. The vestry has been enlarged, and its proportions altered: it is now placed against the chancel wall. The floor of the chancel has been paved with Minton's tesselated tiles. The stained-glass windows are from the manufactory of M. J. P. Capronniere, of Brussels. The subject of the new window on the north side of the chancel is "The Annunciation to the Shepherds." The south window represents "The Adoration of the Magi." A rose window has been introduced at the west end, which is opened out by the removal of the organ, and is emblematic of the union of the gospel in Christ. In the centre is the Lamb; and the four medallions springing from that point contain representations of the living creatures mentioned in the Book of Revelations. A small triplet window is placed in the vestry. The two new windows in the chancel were the gift of the late Mrs. Saunders, to the memory of her family. The rose in the west side of the church and the triplet in the vestry are the gifts of M. Capronniere. The expense of the extension of the chancel, the alteration of the vestry, the window, &c., is 800*l.*, exclusive of the gifts of several of the congregation.

Sheffield. — The Broomhill New Connexion Chapel has been opened. It is situate on the Glossop-road, near the Mount. The chapel is of stone, in the Italian style, the portico being at a considerable elevation above the road. Access to the body of the chapel is gained through a double lobby in the centre of the front, and there are separate entrances to the galleries under the same central portico. The chapel is on the ground or principal floor, the space beneath it on the basement being used for a school-room. This is 55 feet by 48 feet, with a height of 13 feet, light being obtained from windows on each side. There are also two class-rooms here, and the formation of the site has permitted the whole of these school premises to be erected above ground. The chapel is of the same size as the school; and adjoining it there are class-room, minister's vestry, and other conveniences. The whole area of the building, 70 feet by 48 feet, is surrounded by galleries, which are consequently extensive. The height of the chapel is 32 feet. There is accommodation for 800 persons, with unusual width of seats and passages. The total cost will be, it is estimated, about 3,800*l.*, exclusive of an organ which is being built by Messrs. Willis, of London. Towards this sum more than 2,000*l.* have been raised. The architects are Messrs. Flockton & Abbott; and the builder, Alderman Mycock. The chapel is warmed by hot air from an apparatus supplied by Messrs. Haden, of Trowbridge.

Aston (Yorkshire)—Aston church has been recently restored under the direction of Mr. M. E. Hadfield, architect. In the autumn of last year, the present rector, the Rev. A. R. Campbell, determined upon a general restoration of the church; and this circumstance has led to the uncovering of the Norman arcade which separates the nave from the aisles. It had been covered by a thick coat of plaster. The labels, capitals, and even the shafts had been defaced and disfigured by modern mouldings. In the process of restoration it was discovered that the arches were constructed of different coloured stones, so systematically arranged as to leave no doubt that it had been designedly done to give the grace and force of colour to the otherwise simple mouldings. The stones of the three rims are different in colour and texture. The label is purple gritstone, from the neighbouring village of Wales. The outer chamfer is of red sandstone, from the same place, whilst the inner rim and relieving arches are the rich yellow limestone from Lindrick Common, near Worksop. The shafts are built of each kind of stone as marked on the section. One capital only is of Roche Abbey limestone, with an abacus of Lindrick stone. The church generally partakes of three different styles, but there is nothing particularly worthy of note except the arrangement of coloured bands in the arcade. Care has been taken to preserve this feature of the building—and the capitals, bases, and other details have been restored. No renovation of the old work has been permitted, except washing and scrubbing the surface: the practice of chiselling over the old stone to make it look new has been prohibited. The old altar stone has been discovered and placed in the vestry: the consecration crosses are discernible, though much worn. The roof of the nave, which was of a low and depressed character, has been removed, and a new open roof erected in its place, of framed open timber. The south aisle windows have been filled with tracery, and all the plaster stripped from the walls and roof.

Harewood.—The church here, which was originally built in the twelfth century, and which from time to time has undergone many alterations and changes, has been restored from designs by Mr. Scott, and formally re-opened for divine worship. The designs have been carried out under the superintendence of Mr. Parsons, the estate architect to the Earl of Harewood. The pulpit" and font are in Caen stone, with Lizzard serpentine marble from Cornwall, and were carved by Mr. Farmer, of London. The contractors for the general works were Messrs. Beanland, of Bradford; and a warming apparatus was fixed by Messrs. Nelson & Sons, of Leeds. The thick coating of plaster, which covered the walls to a depth of nearly 2 inches, has been removed, and the arches and pillars made to stand forth in their proportion. The flat plaster ceiling has been replaced by a panelled roof of stained pine. The west gallery has been taken away, and open seats of stained pine, one uniform size, substituted for the old irregular pews. The Rythen and Redmayne monuments have now been inclosed by an open screen of oak. The prayer-desk, lectern, and choir-seats are also of oak. A font of Caen stone, with marble pillars, has been presented by the Countess of Harewood, and a sculptured pulpit of the same material by the Hon. Edwin Lascelles. The chancel inside the communion rails is laid with Minton's encaustic tiles. The cost of this restoration has amounted to about 3,000*l.*, the whole of which, except 500*l.* collected in the parish and neighbourhood, has been provided by the Earl of Harewood.

Appleby.—St. Lawrence Church, at Appleby, has been re-opened, according to the *Carlisle Journal*. It has been closed for restoration during the last eighteen months. The side windows are new throughout, having been restored according to a design furnished by Mr. Cory, of Carlisle, while those in the clerestory have been re-glazed, and the stone renewed, where necessary. The chancel and north chancel aisle have undergone a restoration under the superintendence of Mr. Christian, architect to the Ecclesiastical Commissioners. In addition to a new east window, three new windows have been inserted in the north chancel aisle. The whitewashed ceilings have been removed, both in the north aisle and chancel proper; exposing in each case the oaken beams and timber of a new and lofty open roof. A new chancel arch completes the restoration of the eastern end of the church. An improvement has also been made at the west end of the building, the western tower having been opened out by the removal of the organ-gallery, thus giving the church the whole length from east to west, and exposing to view an arch and the large western window, which has been restored in accordance with a design furnished gratuitously by Mr. Christian. The organ is removed into the north chancel aisle. The whitewash has been cleared from the columns and arches throughout the building, and the stone redressed. The whole of the work has been executed by Messrs. Nelson & Co., of Carlisle. The staining and varnishing of the woodwork was done by Mr. Fauset, of Appleby.

Guernsey.—Morley Wesleyan Chapel was opened for public worship on the 19th April. The following are some of the particulars, abridged from the local *Comet*:—The chapel is in the Gothic style, and constructed of red granite, random masonry. The walls are buttressed; the buttresses pointed with Portland cement, similar to those of St. Paul's Chapel. The length of the chapel, which is in the form of a T, is 42 feet; width, 33 feet; length of transept, 47 feet. The walls are 16 feet in height; from the ridge to the ground, 40 feet. The roof is slated. The chapel is lighted by three windows, of quarried glass, on each side; and a centre and two side lights of the same material above the door in front, and two small slit windows, one on either side of the door, contribute towards the same object. A small centre finial and two steeplets, on the front of the building, are added by way of ornament. The addition of a schoolroom at the eastern end, in accordance with the style of the chapel, will give it a cruciform appearance. Provision has also been made, in the event of the chapel becoming too small, to open the partition wall; and convert the schoolroom into chapel accommodation sufficient for eighty persons additional. The contractor was Mr. P. Gallienne, formerly in the employ of the late Mr. Matthew De Putron, builder, St. Martin's. It is calculated to seat 218 persons,—fifty free. The estimated cost of the chapel was 450*l.*; that of the schoolroom, 175*l.*; total 625*l.*

Battersea.—St. John's Church, Battersea, near the Wandsworth station (Waterloo line) was consecrated by the Lord Bishop of Winchester, on the 5th inst. The church contains accommodation for 635 adults on the ground floor, and 100 children in a western nave gallery, and has been erected, including all extras, for which an architect's certificate is required, for 4*l.* 15s. per sitting—allowing 20 inches for each sitting throughout. The church consists of a nave and chancel, 84 feet 6 inches long by 24 feet 6 inches wide, being terminated by a semi-octagonal spac. The north and south aisles are 73 feet long by 17 feet 6 inches wide. The external height of the nave from the ground to the ridge is 44 feet 6 inches; that of the aisles, 35 feet. There is no clerestory. The columns of the arcade are of stone. The octagonal pierced stone pinnacles between the nave and aisles in the west front (one of which is the bell turret) are 65 feet in height. There are griffins carved by Mr. Redfearn at the angles of the base of the broach spires, surmounted by carved finials. The style of the building is Gothic, of the Early Pointed period, adapted to the prevailing taste, with stone dressings and red, black, and grey brick facings. Messrs. Sharpington & Cole were the contractors, who have completed their work ten days before the stipulated time. The chancel fittings were executed by Messrs. Cox & Sons. the illuminated tablets for the decalogue, &c., were by Messrs. Simpson; and the corona, gaseliers, and fittings by Mr. Berry. The carving and stained glass margins were presented by the architect. The cost was about 3,350*l.*

THE BOW BRIDGE, LEICESTER, AND THE TRADITION AS TO KING RICHARD III.

IT is the intention of the corporation to fix on the new Bow Bridge two oblong iron plates, one of which will relate to the erection of the bridge on the site of the old structure of that name, and the other to the legendary account of the death of King Richard III., and the traditional prophecy connected therewith. The plates, which will be made to correspond, will be about 2 feet 6 inches in length, and from 2 feet to 3 feet in breadth. The letters will be raised, and bronzed, and the plates let into one of the piers of stone on either side. The one commemorating the erection of the bridge will have upon it the following inscription:—"This bridge was erected by the corporation of Leicester in the mayoralty of S. Viccars, esq., A.D. 1862, on the site of the ancient Bow Bridge, over which which King Richard III. passed at the head of his army, to the battle of Bosworth Field. August, 1485. Joseph Whetstone, chairman of Highway Committee: S. Stone, Town Clerk: E. S. Stephens, Borough Surveyor." The plate on the opposite side will have upon it the legend in verse, according to Speed's History of Great Britain:—

> "Upon this bridge [as tradition hath
> Delivered] stood a stone of some height,
> Against which, King Richard, as he passed
> Towards Bosworth, by chance struck his spur,
> And against the same stone, as he was brought
> Back, hanging by the horse's side, his head
> Was dashed and broken, as a wise woman
> [Forsooth] had *foretold*, who, before Richard's
> Going to battle, being asked as to his success,
> Said that where his spur struck his head
> Should be broken."

This account is simply handed down as a tradition: and the corporation, in preserving it, are properly enough engaged in taking care that whatever is interesting in connexion with Leicester shall be retained.

PROPOSED TOWN HALL, ALBERT MEMORIAL, &c., FOR EDINBURGH.

THE want of a large and convenient hall for public purposes has long been felt in Edinburgh. Sketches, however, of a design for the improvement of the south side of the High-street, and the erection of a town-hall, were lately prepared by Mr. David Rhind, architect, and have been for some time under consideration. From this design a definite plan has been prepared and engraved by Messrs. W. & A. K. Johnston. The improvements contemplated are of great extent, and are intended, not only to afford ample space in a central position for the town-hall, but to take advantage of the striking natural features of the situation for a grand architectural display. The new town-hall building, it is proposed, should include, besides a hall of 120 feet in length by 80 feet in breadth, other rooms for the meetings of the Merchant Company, the Chamber of Commerce, and other public bodies. Streets are included in the pro-

jected improvements, and these are intended to be wide and handsome, and probably built in the old baronial style already attempted in Cockburn-street. On the north side of one to be called Albert-street, immediately fronting the town-hall, the intention is to erect the Scottish National Memorial to the late Prince Consort, for which between 15,000*l.* and 16,000*l.* have now been raised. The memorial, it is proposed, should take the form of a bronze equestrian statue, with other bronze figures, representing Art and Science. The whole group would occupy a commanding position, and would be seen in grand effect from the whole extent of Princes-street, from the Waverley and North bridges, and from the Mound. Gardens and a terrace are included in the design, and at the southern semicircular boundary of the gardens is the space to be occupied by the statue, to which access will be obtained by four distinct flights of steps. The northern extremity of the whole design is to be occupied by a fountain in East Princes-street Gardens, for which it is understood a legacy has been left in the hands of the Town Council. Messrs. W. & R. Chambers, Messrs. M'Laren, Son, & Co., and others whose property would be bounded on the west by one of the streets to be named St. Giles-street, have indicated their willingness to co-operate heartily in carrying this improvement into execution, if it should meet with the approval of the authorities.

THE VENTILATION OF UNDERGROUND RAILWAYS.

I have frequently travelled on the Metropolitan Railway, and noticed the atmosphere to be particularly unpleasant at Gower-street. At first, the condensers of the engines were said to be insufficient for their purpose: I believe new ones have since been constructed; yet, from recent experience, I fully agree with your remarks in last week's *Builder* upon the imperfect ventilation; and would suggest whether the "sunlight" gas-burner, or some other good draught-creating medium, cannot be introduced at intervals in the *crown* of the tunnel, with a shaft above each to lead away the impure air in convenient directions. The apertures for light and air at Gower-street are below the level of the crown of the arch, and so do not seem greatly to assist the ventilation.

W. H. C.

CONSTRUCTION OF CHURCH ROOFS.

Having had for many years, and lately, my attention drawn to the construction of new roofs to ancient edifices, and to proposed new works, I have met with difficulty in treating the question, when the funds at disposal are limited, in anything like the old spirit as to strength and solidity, particularly when the material must of necessity be *fir*.

I find the only solution to the problem is by giving up flush framing altogether where fir is used, or where the oak or chestnut must be of less scantling than the old roofs; and I propose to substitute the system of lap framing, with dovetail joints, to timbers in a state of tension.

It is rarely the case that, even where fir is used, we are able to specify timbers of the ancient scantlings; and this class of timber, being much less durable and weaker, renders the oak mode of construction totally inapplicable; so that, where a rafter of oak 4 by 4 can safely be mortised, it would be imprudent to treat the same section of fir similarly, with, of course, the same view to durability and strength. In the case where the timbers appear and are dressed, I admit great difficulty arises as to how to ornament or mould them, and I am free to admit the unsightliness of the lap system; but where the roof is ceiled to the underside of spars, there is no hinderance to laying the diagonal braces, punchions, and collars against the sides of the rafters, and notching them down slightly with a dovetail joint, and then pinning them. In this case you have, *firstly*, the advantage of a dovetail end, which, to a piece of framing in a state of tension, is a very powerful mode of connexion. *Secondly*, the sections of the spar and brace are very slightly reduced. *Thirdly*, the cost of such a means of construction is much lessened in labour, and (if the above facts are granted) in the amount of timber required.

With a commendable jealousy in preserving the old spirit in the restoration of our ancient edifices, and working in it in our new, the great Church Building Society forbad, some years ago, the use of tiebeams; and, quite recently, their professional committee have put their veto on the above system of construction, entirely on the plea that it is not in accordance with ancient precedent. If my memory serves me, there are no formulæ giving the relative strain necessary to disconnect two or more portions of framing secured by the several modes of connexion. It is a practical question of much service and interest in these days, when economy of construction is so pressed on our attention, and when there is a growing wish to *build* or establish lasting works, but not in blind accordance with ancient examples.

Philip Boyce, Architect.

THE PARKS AND KENSINGTON GARDENS.

The reference lately made in the *Builder* to the new style of gardening, and in especial to the improvements so notably carried out in the parks and Kensington Gardens, has given much satisfaction to Horticultural professors, and to all amateurs of the English garden. It is most gratifying to witness the advance of floriculture and plantation in places of public resort, where not many years back all was plain, barren, and almost repulsive. When the park and gardens were surrounded by dead walls, they were comparatively deserted: what a difference we now behold! Crowds of admiring promenaders, ladies, families, nurses, children, frequent the tastefully-decorated borders in search of health, and profiting by that enjoyment which a tastefully decked parterre never fails to infuse into the tranquil mind. In point of fact, except in nurseries or floral marts, hitherto there was no example to be found for imitation or study; for the only institution that existed to cultivate public taste in this respect was the Chiswick, or Regent's Park exhibition; and these being open to and accessible by a comparatively small number, a general diffusion of intelligence on the subject was out of the question.

In the improvements so rapidly made it is much to be regretted that the fine timber trees in the Gardens have not received that attention which arborists and private proprietors would have assuredly given to their plantations, whether for effect or for profit. It is deplorable to witness the failing state of the slender, tall, close-grown stems of lofty trees, which, if given a fair interval of space, might yet feather out, and become not only ornamental but vigorous. To-day we see struggling to bud into existence lofty foresters 100 to 150 feet high, dying at the top, exhibiting little more branch than an unthinned pine grove, each starving and whipping its neighbour, through too close proximity! Is there no wood-ranger to arrest this state of decadence and decay? Surely all must know that forest trees cannot arrive at maturity and exhibit a healthy, much less an ornamental growth, at a mean distance of say 12 feet. Entire groves are much closer than that, and many of the trees are 5 or 6 feet only apart. For free growth and natural garniture, each stem should be distant at least half its height from its neighbour.

The thinning of a plantation, while it secures health and grace to the occupants of the grove, also secures to the frequenters of the woods and glades a healthy and genial atmosphere. Having so far touched this subject, I would, with reference to the introduction of fountains and waterworks, observe, that while we give credit to the authorities who have done so much to embellish these gardens, which contribute to the health and solace of great multitudes, there is still a shortcoming, as to effect, in what has been already done, and a great default in design as to what might be effected, if we take into account the means at their disposal, and the great scope and aptitude of the field of their operations.

The four little basins of yellow water, with their abortive fountain squirts, and dimly seen gold fish, are failures. Would they not be better filled in with mould, and transformed into lively knots of planted flowers? Then, again, the hirsute borders of the Serpentine, between the bridge and fountains,—what a happy space they offer for decoration in marginal borders of alternated beds, walks, and knots! Here the most delicate shrubs and flowers would flourish, and lend an edour and grace to grounds and water, which are now certainly pleasing, but which might be made enchanting.

Then there is on the highest plateau of the centre a space of water called the Round Pond, covering eight acres. Here, indeed, is a glorious site for a fountain, in the centre of the glades, palpable from all sides: a jet such as that in the central Serpentine Italian Garden would have a telling effect. The water, too, if forced to this point from the well (Mr. Doowra's), might be conducted back by a pipe, so as to feed and keep in play that fountain also to its full height; but were it possible to obtain a grand fountain, equal to the French fountain, now a derelict in the Horticultural Gardens, the effect would be complete.

Any one, however, who looks at the Round Pond must deplore that so much ground is lost and swamped in so valuable a position: for effect, two acres would be most ample; or the *encircling six acres* might be converted into flower-beds or knots, enriched by appropriate shrubs (not too large growing), so as to form an attraction in this *juste milieu* of the most favoured and valuable of metropolitan pleasure-grounds.*

Joseph Newton.

BEATING THE BOUNDS.

ST. MARTIN-IN-THE-FIELDS.

Sir,—After reading your remarks on the above, I am induced to trouble you with this, as our vicar and churchwardens have resolved not to "perambulate" this year, on account of the heavy expense it entails on them, and which they can only legally charge upon the "rates" once in three years. It has been the custom in this parish to "perambulate" every year, and to take nearly all our school children, 1,200 or 1,300, and the cost of refreshments for them (not to mention creature comforts for the higher powers), is no trifle. It is, however, I think, necessary that an *annual* inspection, even on a small scale, should take place, in order to protect the parish from the encroachments and infringements you have pointed out.

X. C. W.

WORKS WITHOUT NOTICE.

BUILDING ACT.

Sir,—Permit me to direct attention to the very inadequate, almost in point of fact *nominal*, *fines* inflicted by magistrates for neglect of notice,—offering a premium to builders to evade the requirements of the Act.

A few salutary inflictions of the 20*l.* penalty would soon cure the evil, and be an act of justice to the really honest builders. It would also save a great amount of trouble to all parties, as such work is generally wrong, and executed in an improper manner. Such *mistaken* leniency on the part of magistrates simply emboldens offenders.

Under the Act of 1844, in addition to the 20*l.* penalty, we had also treble fees for default of notice. It is notorious that since the abolition of the treble fees, the work improperly carried out without notice has largely increased.

A Surveyor.

THE CUPOLA AND THE BASILICA.

Mr. Wigley's courteous readiness to explain the two points of his lecture, upon which you allowed me to make inquiries, is acknowledged as soon as my *Builder* is to hand. The only way of conducting the discussion to a definite conclusion is for one of your correspondents to state clearly the position to which he wishes the other to adhere. For example, I suppose that Mr. Wigley did not mean, by *cupola*, anything but a roof resting on a circular or polygonal tambour or curb, or covering the space formed at the intersection of two avenues. He did not, by saying that such a cupola was to be found in many churches of the East, mean to intimate his belief that until the Crusades no church in Europe had such a cupola: he did not, by saying that the Crusaders borrowed it from the Arabs at Jerusalem, mean to deny that the Arabs had never made a cupola up to that time, except by the employment of Byzantines: he did not, by saying that the cupola was introduced after the Crusades, mean that the cupola was unknown to the churches of civilized Europe of that time, nor even that in Europe the prevalence of cross churches with cupolas began after the Crusades. Otherwise, I must ask him to support, in some manner, the assertions that *the cupola, so defined, was invented by the Arabs; borrowed from them for the Eastern churches; and not known in any part of Europe till* 1100. These seem to be legitimate translations of his words, and are to me astounding propositions.

With regard to the *basilica*, he seems to think that a room of the least secluded character in a

* The suggestion of this spot as a site for the National Albert Memorial, by a "Member of the Mansion House Committee," may be remembered by our readers.—Ed.

house was the type of the early Christian churches, wherever they existed, rather than the synagogue or the public basilica. Upon reflection he will probably agree with the general teaching that, until the Christian religion was tolerated, congregations listened to their teachers in synagogues, and other public places, or else in secrecy; and that the reception-room, *basilica*, of a Roman noble's palace was not likely to be used, when, according to all tradition, the crypt was more safe than the mansion for a congregation.

G. V. R.

WHAT IS A BRICK?

THE case, Goote *v.* Stone, heard in the Court of Queen's Bench on Friday, was an action on a lease of a brickfield to recover a "royalty" reserved thereby, of so much per thousand of "bricks" made. The question raised upon appeal from a County Court judge was, whether this meant bricks in the mould, or bricks after they had been burnt and fully made. A similar point had arisen on the word "pipes and pantiles." The County Court Judge had decided in favour of the plaintiff, that the lease meant bricks in the mould. Mr. Mellish, Q.C., argued for the defendant, the appellant, that this was wrong, and that the word "bricks" meant not bricks in the mould, but bricks burnt and fully made. "A brick is not a brick until it is burnt. It is a mere piece of clay. If a man buy bricks he surely means burnt bricks. He would be disappointed if he received a cartload of lumps of clay."—The Court thought that the meaning of the words must depend upon the sense in which they must be taken with reference to the object in view. The object of a man who bought bricks was to use them, and so they must mean burnt bricks. But the object of the lease was to levy a royalty on the quantity of clay derived from the land, and in that sense it must mean bricks in the mould.—Judgment for the respondent.

Books Received.

Lectures on the History of England. By WILLIAM LONGMAN. Lectures Fourth and Fifth. London: Longman & Co. 1863.

Mr. Longman has now completed the first volume of his excellent "Lectures on the History of England." With the fifth and last in the volume he has issued the Preface and an Index of the Contents. In the Preface he says,—

"I feel that some explanation is needed of the reasons which have induced me to step out of my province as a publisher, and encroach on the domains of authors; for, independently of a natural feeling, akin to jealousy, which either author or publisher must feel if one or the other attempt to combine the two vocations; it is clear that they cannot, as a general principle, be united with advantage. I trust, however, that authors will forgive me, and not revenge themselves by turning publishers. There is, nevertheless, some advantage in a publisher dabbling in literature; for it shows him the difficulties with which an author has to contend—the labour which is indispensable to produce a work which may be relied on;—and it increases the sympathy which should, and which in these days does, exist between author and publisher.

The circumstances which caused me to undertake the laborious, but most agreeable, task of giving Lectures on the History of England, were these. A Society for the Improvement of the Labouring Classes was formed in 1855 in the small village of Chorleywood, in Hertfordshire, the population of which was almost entirely agricultural. After this society had been established for a year or two, it was thought desirable that monthly evening Lectures should be delivered during the winter season. These were well attended; and, having given in 1857 a Lecture on Switzerland which seemed to interest my agricultural neighbours, I was requested by the incumbent of the district, the Rev. A. Scrivenor, to deliver a series of Lectures on the History of England. In an easy moment I promised to do so. . . . I became fascinated with the subject. It laid hold of me and would not let me go; and thus it was that I became entangled in authorship."

And well it was that he did: these lectures are a model of clearness and simplicity of style; and as such they are suitable to readers of any class. To those for whom they were written they must have given especial pleasure from the consciousness that every word of the lecturer was understood as he went on with his interesting sketches of the history of their native land.

The two parts now issued include the period beginning with the reign of Edward I. (A.D. 1272), and ending with the reign of Edward II. (A.D. 1327).

Britanno-Roman Inscriptions: with Critical Notes. By the Rev. JOHN MCCAUL, LL.D., President of University College, Toronto. Rowsell, Toronto: Longman, London. 1863.

DR. MCCAUL had occasionally, for the last five years, contributed articles to the *Canadian Journal* on this subject; and he has here collected and extended them into a goodly volume, the greater part of which consists of notes of more or less interest.

It is gratifying to see a critical and learned work such as this coming to us from the colonies; and also to find that its subject has been there held to be of sufficient interest, not only for publication in a colonial journal, but for reprint by the colonial press.

The work, we doubt not, will be deemed of value in England no less than in Canada, and also in the United States.

VARIORUM.

"The Year Book of Facts in Science and Art. By John Timbs, F.S.A. London: Lockwood & Co. 1863." It is always with a pleasant relish that we cut up the pages of "The Year Book of Facts;" but we have so often expressed our good opinion of this now long-established and standard series of Year Books, that all we need now do is to note the issue of the volume containing all "the most important discoveries and improvements of the past year; in mechanics and the useful arts; natural philosophy; electricity; chemistry; zoology and botany; geology and mineralogy; meteorology and astronomy."——"Education and Manufactures: the Second Part of the Jury Report, Class XXXI., International Exhibition. By Alfred Tylor. London: Longman & Co." This is a reprint from the Jury Reports of Mr. Tylor, the deputy chairman and reporter of Class XXXI; and has already been quoted in our pages at some length. It treats of Scientific and Art-Education in relation to progress in manufactures—Education in England—and Foreign Schools. Under the first head, strikes, wages and prices, trades' unions, building and other societies, crime, &c., are treated of; under the second, gratuitous education, influence of parents, high education, training and working men's colleges, Government education, &c.; and under the third, schools in France, Germany, and Belgium, as compared with drawing schools in this country.——"A Letter to William Howard Russell, LL.D.; or, Passages in his 'Diary North and South.' By Andrew Dickson White. London: H. Stevens. 1863." The author of this pamphlet also calls it, on the cover, "A Word from the North-West," which implies, as the leaning of it does, that he is a Federalist. Dr. Russell, however, gave so fair an account of both North and South in his "Diary," that we are not inclined to go into the charges here made against him; which, as seen through Northern spectacles at the present exciting moment, are quite as likely to have a twist of their own as any remarks made by a disinterested "foreigner" such as our American cousins are so fond of calling a "Britisher." The state of opinion in this country on the great questions which are more than merely agitating the once United States, is certainly a very anomalous one. We voted many millions sterling to get rid of the stain of slavery ourselves; and yet we do not sympathise so generally and fully as might consistently have been expected with those who are trying to remove that stain from themselves in America. Perhaps the recollection that the movement for the suppression of slavery in the North had a merely political origin; and that slavery was actually reserved as a good thing to loyal states, and taken away from rebellious ones, has something to do with this anomalous state of opinion; and so doubtless has natural sympathy with those who are fighting for their own freedom, whatever they may be doing with regard to that "domestic institution" which we ourselves fastened on them, as "an old man of the sea," of whom it must be difficult to get rid, in a case where the evil is not merely colonial and local, as with us, but a deep-rooted national and all-pervading one with the South. Mr. White's letter is very well written, from his own point of view.

Miscellanea.

THE MIDDLE-LEVEL CATASTROPHE.—There will be no new trial, Chief Justice Erle (who tried the case) being satisfied with the verdict.

PARIS TO BE LIT BY ELECTRICITY.—The lighting of Paris, it is stated, is to be intrusted to M. J. Van Malderan, who has invented a new electric light, one jet of which is equal to 2,200 jets of gas. The Place Saint Sulpice is destined to be the first where the essay is to be tried.

NEW HOTEL AT BLACKPOOL.—The South Blackpool Hotel Company, Limited, have secured a site at South Blackpool, Lancashire, contiguous to the station of the proposed Preston, Lytham, and Blackpool Railway, on which to erect a hotel on an extensive scale, combining all the modern improvements. The company propose to raise a capital of 50,000*l.*, in 10,000 shares of 5*l.* each.

TREASURE TROVE.—Sir: Whilst the reading account of the destruction of some very valuable treasure found at Mountfield, in Sussex, it occurred to me that if the Government were to empower the surveyors of our provincial towns, or the village schoolmaster where there is no surveyor, to secure for them, under proper regulations, all treasure trove, and allowed them a small per centage, many things of interest and value would make their appearance.—DEBRIS.

DWELLINGS FOR THE WORKING CLASSES.—With a view to promote enlarged investments of capital in model dwellings and other establishments for the benefit of the working classes, the Council of the Society of Arts has instituted a statistical inquiry into the results hitherto obtained, including family dwellings of every description, model lodging-houses, dormitories, refuges, baths and washhouses, soup kitchens, coffee-houses, &c.: any who can supply information, or indicate sources where it may be obtained, are requested to communicate with the secretary, who will send blank forms for being filled up with the required data.

DAMAGES: THE LATE ICE-HOUSE ACCIDENT AT ISLINGTON.—The case Harrold *v.* Gatti was an action to recover compensation for injuries received through the alleged negligence of the defendant's servants. The defendant pleaded not guilty. The plaintiff is a bricklayer's labourer, and the defendant formerly carried on business at Hungerford Hall. In January, 1862, the defendant was constructing a large ice-well on his premises in the Caledonian-road, Islington, when the roof fell in, and the plaintiff received the injuries complained of. The action was terminated by the defendant's consenting to a verdict for the plaintiff for 80*l.* Verdict accordingly.

THE LIVERPOOL WELLINGTON MONUMENT.—The statue of the Duke has been safely placed on its pedestal at the top of the monument, on the site appropriated by the Town Council, near the St. George's Hall. The statue, which is of bronze, weighs five tons and four cwt., and the contractors, Messrs. Holmes and Nicol, commenced to hoist it up on Saturday morning at four o'clock. At eleven o'clock the statue was placed in position on the pedestal at the top of the column. During the operation Mr. Nicol, the contractor, Mr. Glaister, the mason who constructed the column, and Mr. Lawson, the sculptor, were present. The figure was then bolted down, and a sheet thrown over it, until the inauguration on Saturday. The panels for the base of the monument, and the four eagles that are to be placed, one at each angle of the cornice of the pedestal, were not ready.

WORKING MEN'S CLUB AND INSTITUTE UNION. A conversazione in connexion with this movement has been held at the Hanover-square Rooms, and was numerously and fashionably attended. Lord Lyttelton presided. The proceedings commenced with a musical performance by the choir of the Working Men's College. The refreshments were set out in the drawing-room for nearly 1,000 guests. The meeting was addressed by the chairman, the Dean of Christchurch, the Rev. H. Solly, and other gentlemen, explanatory of the objects and claims of the Union. The Union, as we have before noted, was formed for the purpose of helping working men to establish clubs or institutes where they can meet for conversation, business, and mental improvement, with the means of recreation and refreshment, free from intoxicating drinks, the clubs at the same time constituting societies for mutual helpfulness in various ways.

CERAMIC MEMORIAL OF THE PRINCE CONSORT.—The council of the Art-Union of London have been honoured with the following letter, addressed to the hon. secretaries, and dated—"Osborne, 11th May, 1863.—Gentlemen: I have had the honour to present to her Majesty the Queen the tazza which accompanied your letter of the 8th of May. The Queen has commanded me to return her best thanks to the council of the Art-Union for their attention, and to assure them that her Majesty will value very highly this very creditable example of printing on ceramic ware.—I have the honour to be, gentlemen, your most obedient humble servant,

(Signed) C. B. PHIPPS."

SHOCKING ACCIDENT WITH GIRDERS AT BIRMINGHAM.—At the works of Messrs. Smith & Sons, at Springhill, two large girders had just been finished and weighted with about forty tons each of pig iron to test them, when both girders fell, burying beneath them and the pig iron Mr. Charles Grace, of Bath, inspector of girders to Mr. Marsh, C.E., and a workman from Smethwick: they were of course fatally crushed, Mr. Grace indeed being killed on the spot, while the workman shortly afterwards died. The report speaks of the fall of the girders but not of their fracture: they were placed on blocks of wood 5 feet only from the ground.

NEW ACT ON GARDENS IN CITIES AND BOROUGHS.—An Act of Parliament has just been printed, for the better protection of gardens and ornamental grounds in cities and boroughs. The object of the statute is to free from neglect or encroachment gardens in squares and other places; to vest them in the Metropolitan Board of Works or other corporate authority, or vest them in a committee of rated inhabitants, for keeping the same as a garden or pleasure-ground, otherwise the same to be vested in a board or parish, to be kept as an open space or street. By-laws, to be approved of by a judge of common law or justice at sessions, are to be made for the management of the places, and penalties to be enforced for non-observance of the same.

THE METAL WORK AT THE INTERNATIONAL EXHIBITION.—On Monday night the third of a series of six lectures having reference to some of the contents of the recent International Exhibition, was delivered in the Birmingham and Midland Institute, by Mr. W. C. Aitken; the subject being "The Metal Work of the Exhibition of 1862. The lecturer pointed out the great progress which had been made in iron and steel—especially in wrought iron—since the Exhibition of 1851; and mentioned in illustration a variety of instances showing how extensively these metals were used. No nation exhibited at the International Exhibition iron castings equal to those shown by Sheffield and Derby houses, and by manufacturers of Coalbrookdale and elsewhere. Great improvements were shown in the plate workings and in enamelling on iron; and among the other products in which advances had been made since 1851 was the manufacture of jewelry in aluminium and bronze. Birmingham he showed to have been well represented in many manufactures; and during the evening mentioned several firms who had contributed largely to the Exhibition. He concluded by remarking that in all the metals the progress made since 1851 was very considerable. All that was done in iron resembled more the feats which the Grecians might ascribe to their blacksmith gods than the labour of human beings.

THE DRINKING FOUNTAIN MOVEMENT.—A drinking-fountain which Mr. John Brett has presented to the Ipswich public has been opened at the Arboretum. Mr. T. S. Gowing, who takes a great interest in all that pertains to the Arboretum, suggested that the opening should take place with some little ceremonial, and several hundreds assembled round the fountain: Mr. Gowing opened it, and then read some verses which he had composed in honour of the occasion. The structure stands on two steps of Portland stone, and is of a quadrangular form, divided into two unequal parts by a bold ornamented moulding. The basement portion has on each of the four sides a projection semicircular on plan, containing a basin fluted from its circumference to the centre, after the manner of the water drains of the ancient piscinas. Above these projections, sunk into the face of the wall, there is on each side a small recessed arch, with incised ornamentation. On the recessed slabs are spouts surrounded by iron scrollwork, with chain and galvanized cup on one side, and pull for water on the other. At the angles of the upper portion are banded shafts of Purbeck marble, with floral capitals supporting an entablature, elaborately carved with water-plants, conventionally treated; underneath which are also disks and lozenge-shaped panels, in red, green, and yellow Devonshire and Sicilian marbles. Over each shaft is a pedestal crowned with a pine cone, and between them are four anthemion ornaments. Above rises a stone roof in shape of a truncated pyramid, each face carved with laurel-leaf scales. The design is Romanesque, freely treated, and the materials used are Aubigny and Corsham Down and Portland stones; wrought-iron; Purbeck and other polished marbles. The fountain was designed by Mr. Phipson.

GALLERY OF ILLUSTRATION.—Mr. and Mrs. German Reed's present entertainment, "A Charming Cottage," increases in popularity; and Mr. John Parry still astonishes and delights in "Mrs. Roseleaf's Evening Party."

LIVERPOOL ARCHITECTURAL SOCIETY.—At the concluding meeting of the session, on Wednesday evening, the 6th inst., from the report of the Council it appeared that there are 157 members of the society. Mr. W. H. Weightman was elected president, and Mr. Kilpin and Mr. Boult vice-presidents, for the ensuing year, and the council and officers for the ensuing year were appointed. The president then read the annual address, in which he reviewed, briefly, the various public works at present in progress in this town and its neighbourhood. He made favourable allusion to the engineering works in course of construction for the Dock Board on the Cheshire side of the Mersey; and made interesting allusion to the different matters, directly and indirectly, connected with architecture, which had occurred in the course of the past year. It was resolved that the excursion this year should be to Chester and Eaton Hall.

ACCIDENTS.—Part of the tower of Preston Church, Suffolk, has fallen. It had for a long time been in an unsatisfactory state, owing to its having been struck by lightning above a century ago, and repaired in an inefficient manner. Lately it had become absolutely necessary to rebuild the staircase, the upper part of which had been taken down for the purpose, when the greater part of the east wall of the tower and a portion of the south wall fell, destroying some of the roof of the nave, and burying under the ruins the gallery of the church, together with the organ. The bells, six in number, are at present uninjured; but the dangerous state of the part of the tower still standing causes anxiety. Had the fall occurred on Sunday, the loss of life must have been great. ——A new three-arch bridge at Trowse, with a centre arch 38 feet in span, and about 9 feet in rise, was in course of erection over the river by Messrs. Stanley & Son, under the direction of the county surveyor, Mr. R. M. Phipson: the bridge, which was built of brick, with an outside facing of stone, had advanced almost to completion, the work having been hastened on account of the traffic; and Mr. Phipson attended in order to ease the centres or supports of the middle arch. The brickwork of the centre arch shortly afterwards gave way, and dragging the stonework with it, fell into the river. No one was injured, as the workmen were at dinner; and it was fortunate the accident occurred previous to the bridge being completed and opened for public traffic.

THE PROJECTED OBSTRUCTION OF LUDGATE-HILL.—The secretary to the Committee for the Preservation of Ludgate-hill remarks that, "the whole railway interest ought to combine to consider the alternative of a tunnel under Ludgate-hill in place of a tunnel over the hill; for if the latter structure should ever be erected, it will be a lasting and fatal obstacle in the way of all future railway communication across the metropolis. Its appearance will be hailed with a shout of execration; it will be smothered with nick-names; and will be known in and about London as the 'Last of the Viaducts.'" The committee, it seems, were ready to raise a light outline model of the air tunnel in position if the authorities had permited, in order that the public might be able to judge ocularly of the dreaded effect of such an obstruction; but really no such step was necessary; and besides, it is questionable whether a light outline model would impress the public eye and mind, as the heavy and opaque reality would, were it once put up. However, the most strenuous exertions ought to be made to get rid of the threatened nuisance. The warning and unsightly air-tunnel at London Bridge will give the public a good enough idea of what they have to expect should the one at Ludgate-hill be carried out, keeping out of view altogether the obstruction to the view of St. Paul's from the western approach. On this subject Mr. Penrose, the surveyor to the fabric of St. Paul's, draws attention in the *Times* to the fact that, seen from Fleet-street, sixty yards before reaching Farringdon-street, the proposed bridge *would* hide more or less of the western façade of St. Paul's, and give in exchange nothing but its deep sides and cavernous soffit—at least forty feet wide. With regard to the practicability of a tunnel in place of a viaduct, the committee are said to have the best professional advice to show that the company might construct such a tunnel, and save money by the alteration in their plans.

VENTILATION OF OUR IRON-CLAD SHIPS.—Ventilation has been applied by Mr. Turner, the master-shipwright, to the *Caledonian*, iron-clad, now building. A powerful force-pump is to expel the vitiated atmosphere, and supply every compartment with pure air.

THE KIDDERMINSTER CARPET FOR THE PRINCE OF WALES.—Nine designers competed and two designs were selected, to one of which the preference was at length given; and it was found to be by Mr. Harvey, of Kidderminster, who obtained several medals at the International Exhibition for his designs. The other was by Mr. Benjamin Perks, also of Kidderminster, a young man of twenty, whose design was highly praised. In the successful design, while aiming at as rich an effect as possible, the artist has endeavoured to connect the carpet in some way with the Prince. He has consequently introduced the Gothic rose, alternating with the Dagmar Cross, in the principal portion of the border; whilst the inner border has been set apart for the monogram "A. E. A." and the coronet. The next thing will be to select by ballot the manufacturer of the carpet.

THE CHURCH OF SANTA CROCE, FLORENCE.—On Sunday last, says a recent letter from Turin, one of the finest creations of modern Italian taste and genius,—the façade of the world-renowned Church of Santa Croce of Florence,—was, amid the enthusiastic acclamations of the Florentine population, unveiled to public gaze,—Prince Carignano, as representative of his royal cousin, the King, with the Minister of the Interior, and all the government and municipal authorities, taking part in the ceremony. This façade is in Florentine mosaic, but the only marbles employed are green prato marble, and the white marbles obtained from the old Tuscan quarry, which Michelangelo preferred to all others when choosing the material of his statues, though perhaps, being from a different part of the quarry, of a rather rougher grain. It is to the care and munificence of an English resident in Florence—of Francis James Sloane—that the successful and speedy completion of the magnificent façade is mainly due. His pecuniary contribution to the work is said to be about 200,000 francs; but, in all probability, it has been a great deal more, because, whenever, since that work first began, a temporary difficulty was experienced for want of sufficient funds, Mr. Sloane's purse was instantly opened, and the difficulty forthwith removed. The subject of the chief bas-relief is the "Exaltation of the Cross," which surmounts the middle door of the church, and is itself again surmounted by the statue of the mourning mother of the Saviour. The work has been executed by Giovanni Dupré.

NEW BARRACKS AT DOVER.—The south front new casemated barracks, situate in a deep and newly-formed trench in front of the married soldiers' quarters, near the citadel, have at length reached completion. The contractors are Messrs. Lee & Son, of London. This structure has contained six millions of bricks in its construction. At the east-north-east angle rises a pier to the height of 67 feet, being 18 feet by 15 feet in thickness, and the whole is set in Portland cement. The front walls are 4 feet 8 inches thick; the party walls 4 feet 3 inches; and the back walls 2 feet 3 inches. The mean height of the building is 53 feet; its length 314 feet, with a return of 100 feet, making 414 feet of frontage. The building has three stories, above the third of which is a series of arches of 20 feet span, each consisting of eight rings of bricks set in Portland cement. The whole is bomb-proof; and preparation is made at the top of the building for a battery, not included in the present contract. Near the grand entrance to the barracks is a winding wainscot staircase, from which a spacious corridor leads off on the first floor to the mess-room and officers' quarters. The mess-room is 30 feet by 18 feet. Contiguous to this is the mess establishment, consisting of ten rooms, in addition to an ante-room. In other parts of the barracks are a sergeants' mess-room, 30 feet by 20 feet; eight sergeants' rooms; 23 soldiers' rooms, 30 feet by 20 feet, each adapted for 11 men; quarter-master and barrack-master's stores; tailor's, shoemaker's, and armourer's shops; orderly-room, guard-room, prisoners' rooms and cells, into the latter of which warm air is admitted by means of flues. The depth of the building from the front is 37 feet, and beyond an area of 25 feet deep; at the back is a terrace 10 feet wide, which runs along the front of the back offices, including cookhouses, bath and ablution-rooms, &c. The building has been under the superintendence of Mr. Bispham for the contractor; and of Mr. Downer, for the engineer department.

Anvil Block Casting, Sheffield.—Messrs. Stanley & Co., iron founders, Midland Works, Sheffield, have cast an anvil block, weighing one hundred tons. The operation of casting began about eight o'clock, and continued until three. The mould—to the uninitiated only an immense hole in the earth—was situate in the centre of a spacious casting-room, having on each side a powerful crane, by which the molten metal was conveyed in ponderous "ladles" from the furnaces to the mould. The metal was run from two large cupolas and two air furnaces. The anvil block is intended for a 12½-ton Nasmyth's double-acting steam-hammer, resting on a foundation of oak blocks, 11 feet square by 4 feet deep, and 120 large piles driven 10 feet in the ground by steam power. The hammer is for forging the homogeneous metal for the large Whitworth guns and projectiles, marine engine-cranks, and other shafts, weighing from 5 to 8 tons each.

Transplanting of Large Trees.—Sir Joseph Paxton and other English horticulturists were, we believe, the first who attempted, or at any rate perfected, the system of removing large trees from one place to another; but during the last few years it has been practised in Paris to an extent unknown elsewhere. At spring and fall the transplanting trucks, or wheeled frames, are to be seen in all directions, and the Champs Elysées, the Boulevards, and the various squares recently laid out in many parts of the town, have been adorned with thousands of noble trees by these means. A report was made on the subject the other day to the Central Society of Horticulture, by which we are told that horse-chestnut trees more than 39 inches in diameter, and a catalpa tree 150 years old, and 23 inches in diameter, have been transplanted with success. Another and very remarkable case is mentioned, namely that of three good-sized trees growing in such a manner that they could not be separated, having been removed together from a private garden about to be destroyed, the mass of roots and earth measuring five metres, or about sixteen feet English in length. It has been discovered, that the bleeding of trees, and the attacks of insects, after the cutting off of branches, may be effectually stopped by the simple method of well brushing the part exposed with a paste made of wood-ashes and water: the ash enters between the fibres of the wood and prevents exudation, while the alkaline property of the mixture keeps off insects.—*Popular Science Review.*

The Nottingham Sewerage, &c.—The annual report of the Highway Committee has just been presented to the council. The report states that the sewerage of the borough is steadily progressing. The most important work of the sewerage during the last year consists of the river Leen culvert and intercepting sewer which was completed in January, 1863. The culvert commences at the Cork Holes, and terminates, for the present, at the bottom of Finkhill-street; and the formation of it has considerable effect upon the surrounding district, and will, year by year, continue to give greater efficiency to the district sewerage. The total expense of the new work has been under the sum of 4,500*l.*, the original estimate. For a considerable time past the general condition of the public sewerage has been under investigation. Old sewers have been opened and examined and their state registered: all permanent sewers have also been examined and placed on the plans of the sewerage: manholes have been constructed for access and inspection; and all new works have been designed and carried out with a view to permanency, and the object of perfecting the general sewerage of the borough as early as possible. The amount of permanent sewerage already established within the borough is about as follows:—Executed by the late St. Mary's Highway Board in that parish and in the new inclosure, 8,779 yards; executed by St. Peter's Highway Board, 352 yards; executed by the Local Board during the last three years in the old town and in the new inclosure, together above 5,855 yards; to which if is added the quantity of sewerage executed by the Inclosure Commissioners, a total extent of permanent borough sewerage is obtained of about 15½ *miles*. The panterpits in connexion with the street sewerage (upwards of 2,000 in number) have been repaired as far as possible, and in forty-five streets improvements have been made. All the sewerage and other public works contained therein, and in connexion with the other committees of the council, are carried out from the plans and under the personal superintendence of Mr. Tarbotton, C.E., the corporation surveyor.

New Branch of Trade at Coventry.—Ribbons not being wanted, Messrs. J. & J. Cash, of Coventry, according to the local *Herald*, have employed some of their looms in an entirely new article of manufacture, viz., strips of muslin of all convenient widths for "frilling," woven in the loom, so that a firm edge, resembling a hem, is formed on one side, and a running thread is inserted on the other, by which the material can be gathered up at once for frilling purposes. Every lady, it seems, who knows the expenditure of time and trouble in hemming and "whipping" breadths of muslin for frills, will thank Messrs. Cash for the invention.

Antiquarian.—A tesselated pavement has been discovered in the old nursery ground, adjoining the county hospital, Dorchester, during excavations for a drain to a village residence building there. It was scarcely 2 feet below the surface, and the *débris* on the top included several roofing slabs, resembling those found under similar circumstances in the enclosure of Dorchester Castle. ——Some quarrymen excavating around the Roman encampment on Cleeve-hill, says the *Gloucester Chronicle*, have opened what are locally termed "soldiers' graves," and coins, burnt bones, the foundations of a Roman dwelling, and relics of various kinds, have been found. The Earl of Ellenborough, as lord of the manor of Southam, in which the discoveries have been made, has stopped further excavations until the ground has been examined by experienced archæologists. About three miles from this spot, to the right of Winchcomb, an entire Roman villa has been discovered, and is now laid bare. The relics discovered will be preserved at Sudely Castle. The villa is similar in many respects to that at Witcomb, in the park of Lady Cromie, and has reception-rooms, and wet and hot *hypocausts*, or baths. The tesselated pavements are finely arranged, and various designs adorn each apartment. The average dimensions of the rooms are about 15 feet square.

TENDERS.

For the new Roman Catholic Church at Stourbridge, for the Rev. Walter Keen. Mr. E. Welby Pugin, architect:—

Bloomer	£4,390 0 0
Hartland	3,887 0 0

THE *"Mechanics' Magazine,"* Sept. 5, speaking of Benson's Watches, says:—"The number of watches produced at Ludgate-hill is something enormous, touching 15,000 yearly, manufactured on the most approved principle of division of labour, under the personal superintendence of the principal. The firm, as we understand, does not profess to make watches at the lowest price, but the best watches at the price; and from the magnitude of their business, and the necessity for more extensive premises, we may fairly judge that they have received the impress of public approval." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch from the plainest to the highest quality of which the art is at present capable, and adapted to all climates. Benson's Illustrated Pamphlet on watches (free by post for two stamps), contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post.—J. W. Benson, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

TO AMATEURS, TURNERS, AND OTHERS.—The Valuable Lathes, Tools, and interesting Effects of the late John Taylor, Esq., F.R.S.

MR. FREDERICK A. MULLETT will SELL, at 31, CHESTER-TERRACE Regent's-park, on MONDAY, the 25th inst., at TWELVE, a 4-feet IRON-BEDDED LATHE with 6 inch centre, and a large assortment of most expensive chucks, by Holtzapffel & Co.; a 3-feet bedded lathe, with 3½-inch centre, with brass and boxwood chucks, &c.; a rose cutting and planing machine, with iron bed and frame; a large quantity of valuable engineering tools; about 2 cwt. of hardwood; bunches; seats of drawers; mah.gany cases, &c. May be viewed the day prior and Morning of Sale, and catalogues had on the premises, and at the Auctioneer's offices, Albion place Hyde Park square, W.

NORTH LONDON RAILWAY.—KINGSLAND JUNCTION.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, by order of the North London Railway Company, on the PREMISES, near the Kingsland Station, on TUESDAY next, MAY 19th, 1863, at TWELVE, the first portion of the excellent MATERIALS of about SEVENTY HOUSES &c. SHOPS, road, Dalston lane, Forrest-row, &c. &c.—May be viewed the day previous to Sale, and catalogues had at the Offices, Kingsland-road and Camden Town.

THREE ACRES of VALUABLE FREEHOLD BUILDING LAND, Barnes, close to the Hammersmith Bridge.

MESSRS. GLASIER & SON are instructed to SELL by AUCTION, on WEDNESDAY, JUNE 3rd, at TWELVE for ONE o'clock, in one or more LOTS, Three Acres of VALUABLE FREEHOLD BUILDING LAND, with a Frontage of abt. 700 feet to an occupation road leading out of the Hammersmith Bridge Road.—May be viewed, and Particulars and of HAINES, Esq. Solicitor, 178, Edgware-road; at the Bolton Arms, Barnes-road; at GABRAWAY'S; and of the Auctioneers, 21, Charing Cross, S.W.

BUILDING MATERIALS, BRIDEWELL.

MESSRS. GLASIER & SON are favoured with instructions from the Governors of Bridewell Hospital, to SELL by AUCTION, on the PREMISES, on WEDNESDAY MAY 27th, and following days, at TWELVE for ONE, the valuable BUILDING MATERIALS and FITTINGS, comprising 100,000 capital stock bricks, several thousand feet of capital York and Portland stone in paving, coping, steps, string courses, cills, &c.; 100 squares of slating, slating boards, rafters, flooring, seasoned deals, timber, sash and bells, iron doors, railings, bars, gates and castings, about 50 tons of lead, coach house gates, sashes, doors and iron ex, large coppers, slate cisterns, large steam cooking apparatus, chimney pieces, stoves, ranges, and other fixtures and fittings.—May be viewed the day prior and mornings of sale, and catalogues had on the premises; and of the Auctioneers, 21, Charing Cross, S.W.

SURREY.—Very Eligible Building Land, at Walton, a beautiful open and healthful district, on the main line of the South Western Railway, 40 minutes' ride from London

MESSRS. RUSHWORTH, JARVIS, & ABBOTT are instructed to announce for SALE by AUCTION, on FRIDAY, JUNE 26th (unless previously disposed of), about 12a. acres of FREEHOLD BUILDING LAND, part of the Ashley park Estate, extending from the railway station towards the village of Walton upon-Thames, a distance of about a mile and a quarter by the direct road, and occupying nearly the entire frontage, besides very extensive and valuable frontages to the main roads in other directions. This land, which is all of a dry sand and gravelly soil, might be brought into immediate operation as sites for gentlemen's residences of the first-class, and presents a highly important and most attractive building property, worthy the attention of large capitalists as a sound and lucrative investment—a statement fully justified by the successful result of the building purchases where many have taken place on the Oatlands park Estate adjoining, though at a greater distance from the metropolis, and further from railway accommodation. The land is well cultivated as arable, and is ornamented with beautiful plantations and trees from 30 to 50 years' growth, available in laying out the ground for first class villa residences, which are much sought for in this locality, and from the proximity to the railway station would readily secure tenants.—Further particulars may be obtained at the Offices of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Land Surveyors and Architects, Saville row, Regent-street, W. and 19, Change alley, Cornhill, E.C. who are authorised to negotiate a sale by private treaty.

OUNDLE, NORTHAMPTONSHIRE. VALUABLE FREEHOLD ESTATE.—The Talbot Inn, as a Private House.—TO BE SOLD BY AUCTION, by

MR. S. DEACON, on the PREMISES, on the 28th day of MAY, 1863, at SIX o'clock, in the Evening, in one or more Lots, as may be determined upon and subject to conditions of sale, all that capital Messuage or Dwelling-house, long known as THE TALBOT FAMILY INN AND POSTING HOUSE, situate in the centre of the Town of Oundle, with a large frontage in New Street, adjoining the Market Place, together with the stables, extensive range of stabling, granary, and other out-offices thereto, coach-houses, outbuildings and yards in the rear, covering half an acre of land. The House, which may be termed the interesting feature of the whole, from its Elizabethan front, built with a part of the stone from Fotheringhay Castle, contains on the ground floor, a handsome entrance hall, dining and drawing rooms, large dining or billiard room extending the whole length of the building, with nine good bedrooms and dressing room on the first floor, and seven attics over. Behind the house is a large yard, wells of excellent water, a good garden, ten stables, barns, and numerous outbuildings, with a private entrance at the back. The Inn and premises let at no great expense to be sub-divided into excellent trade dwelling houses and good cottages, and parts of the extensive cellarage for wines may be advantageously sold off, and the whole estate, from its situation and extent, forms a very valuable investment. The property may be viewed, and further particulars known, on application to the Auctioneer, at 1 at no offices, in Oundle.

Oundle, 9th May, 1863. CHAS. THOS. WILSON.

MR. G. NEWENHAM (Pupil of G. G. Scott, Esq. R.A.) PREPARES Sets of Competition Designs, Working and every description of Architectural and Accurate Drawings. Perspectives Outlined in a superior manner (and coloured by the best artists), with punctuality and despatch, and on reasonable terms.—Offices, 28, Parliament-street, Westminster, S.W.

The land has an inexhaustible supply of brick-earth, and the premises are convenient for many manufacturing purposes.—For further particulars, apply to Mr. H. WITHERS, Land Agent, Redbridge, near Southampton.

TO CONTRACTORS.—TO BE LET, the several WORKS required in the ERECTION of a MILL, with engine and boiler house, chimney, warehouses, and offices, at Kidderminster, for Thomas Lea, esq.—Plans and specifications may be seen at the Assembly-room, Lion Hotel, Kidderminster; and bills of quantities of the several works may be obtained on application at our Offices, in Bradford or London, from WEDNESDAY, MAY 27th, until SATURDAY, JUNE 6th, on which last mentioned day, before 12 o'clock at noon, sealed Tenders must be delivered to us, under cover, to THOMAS LEA, Esq. Kidderminster. The lowest Tender not necessarily accepted. LOCKWOOD & MAWSON, Architects. Post office Buildings, Bradford; 10, Lion Inn-fields, London.

TO BUILDERS and OTHERS.—TO BE LET, in Holloway-road, a HOUSE, with Workshops and large yard. A lease can be had. Valuation of shop and fittings required—apply to Mr WESTON, Tea Dealer, 19, Pleasant-row, Upper Holloway-road.

BUILDING LAND TO BE LET, at Canonbury (Marquess road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Croydon, &c. Also, at Edward's road, Bow, three cottages for completion. The usual advances of money to respectable parties.—Apply at the Offices of Mr. J. EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

LONDON.—UPPER THAMES STREET. Valuable and important FREEHOLD WATERSIDE PREMISES TO BE LET by TENDER, upon Lease for Twenty-one or Seventy seven Years from Lady day, 1863. The premises are the property of the Dyers' Company, and lie between Blackfriars and Southwark bridges, in the best part of Upper Thames street, where the principal iron, metal, paper, and dry goods warehouses are situate, being in fact the London market for those commodities. The frontage next the Thames is 30 feet, with a depth of 218 feet. The premises can be viewed at any time, and full particulars of the property can be obtained upon application to HENRY BATE, Esq. the Clerk of the Company, Dyers' Hall, Dowgate hill, London, E.C.

BUILDING LAND TO LET, near the Camden Railway Station, for Sixteen H. USES, which are much required, together with a good SITE for a PUBLIC HOUSE. Roads and Sewers made. For particulars, apply at Mr RICHARDSONS' Office, St. Paul's-road, Camden-town; or J. K. WRIGHT, Solicitor, 25, Bedford row.

TO BUILDERS and OTHERS.—TO BE LET, within half a mile of the Nine Elms Station, COMMODIOUS PREMISES suitable for Workshops, &c. extending over an area of 150 feet by 85 feet, at present a brewery, but easily convertible: consisting of a brick building 55 feet long 25 feet wide, and three floors high, suitable for carpenter's and joiner's shops, with steam-engine of a horse power, large sheds, stabling for eight horses, and two yards. For particulars, apply to Mr J. H. BRIDGES, Falcon Brewery, Ipswich.

ROSS of MULL GRANITE COMPANY (Limited).

Granite for contract work, 10,000 ft a month if required. POLISHED RED GRANITE for architectural work, blocks can be had of any dimensions.

Apply to the Secretary, 35, Parliament-street, S.W.

THE BISHOP WEARMOUTH IRON WORKS, SUNDERLAND.—These valuable PROPERTIES with the Rolling Mills and all other Machinery, the property of the Derwent and Consett Iron Company, Limited, will shortly be submitted to PUBLIC AUCTION, by direction of the Trustees, and under the sanction of His Honour the Vice Chancellor Kinderley. The time and place of sale, together with further particulars, will shortly appear

JOSEPH ANDERSON, Solicitor to the Trustees.

Newcastle-upon-Tyne, 11th May, 1863.

LONDON GENERAL OMNIBUS COMPANY, LIMITED.—The Directors are desirous of receiving TENDERS for about 120 Tons best RANDAM PEBBLES, not exceeding 4 inches in depth. Tenders, stating price per ton and place of delivery, to be sent to the undersigned on or before next.—By order,

A. G. CHURCH, Secretary.

31, Moorgate-street, May 9th, 1863.

THE PATENT CONCRETE STONE COMPANY (Limited) Temporary Offices: 7, Parliament-street, Westminster.—At a Meeting of the Board of Directors, held here this day, it was resolved: "That applications for the remaining shares in this Company must be made to the Brokers, Messrs. BARRY & CO. Birchin-lane, E.C. before the 1st day of JUNE next, on which day the share-list will be closed."

May 1, 1863. THOMAS PIPER, Secretary.

LONDON GENERAL OMNIBUS COMPANY (LIMITED).—The Directors are desirous of receiving TENDERS for the ERECTION of STABLES, in Duncan street, Islington. Plans, specification, and quantities to be had at the Office of the Company, 31, Moorgate street. Sealed Tenders and endorsed "Tender for Works" to be sent to the undersigned, on or before NOON on the 1st of JUNE. The Directors do not hold themselves to accept the lowest or any Tender. By order,

31, Moorgate street, May 14, 1863. A. G. CHURCH, Secretary.

QUEBRADA LAND, RAILWAY, and MINING COMPANY (Limited).

Copies of SPECIFICATIONS and CONDITIONS for the CONSTRUCTION of this Company's RAILWAY can be obtained from Messrs. DUASFORD & RANKEN, 9, Broad-street-buildings, London; or from Mr R. GRANTHAM, 7, Sedan Layri, Lorca, by either of whom TENDERS will be received up to the 20th inst.—By order of the Board, DUNSFORD & RANKEN, Managers.

11th May, 1863.

THE GRENVILLE DELABOLE and TREHANE SLATE and SLAB COMPANY (Limited and Registered). Capital 21,000l. in 3,000 Shares of 10l. each. Deposit to be paid to the Company's Bankers, Messrs. Smith, Payne, & Co. per Share, and a further payment of 2l. per Share on allotment.

BANKERS.

The London, Birmingham, and South Staffordshire Banking Company (Limited), 110, Cheapside.

AUDITOR.

Arthur Cooper, esq. Public Accountant (W. & A. Cooper), 13, George street, Mansion House, London, E.C.

SOLICITORS.

Messrs. Hampton & Burgin, 8, John-street, Bedford-row, W.C.

ABRIDGED PROSPECTUS.

The objects of this Company are to carry on and work the Grenville Delabole and Trehane Slate and Slab Quarries, in the parishes of St. Teath and Treneglos, in the county of Cornwall.

The lease of the Grenville Delabole Quarry, consisting of forty-two acres, is for twenty-one years, at a rental of 80l. per annum for the first seven years, 70l. per annum for the next seven years, 60l. per annum for the remainder of the term, and 1-20 royalty.

The lease of the Trehane Quarry, consisting of seventy two acres, is for thirty years, at a rental of 40l. per annum for the first seven years, 70l. for the remainder of the term, and 1-20 royalty.

The Directors have recently purchased the leases of these valuable properties with out cash payment, on the allotment to the vendor of 200 fully paid-up Shares in the company. Great abundance of slate has been found at a few feet from the surface in both quarries. They are estimated to produce from 200 to 300 tons per annum, and to pay large dividends, in consequence of the ever increasing demand for slate.—*Vide Jones's Geological Survey of Cornwall*, 24th Apr., 1861.

Applications for shares to be made through the Brokers, Messrs. Barry & Co. 20, King's Arms-yard, Moorgate-street, London, E.C. where specimens of the slate and engineer's reports may be seen, forms of application, for shares, detailed prospectuses, and all information obtained.

THE GRENVILLE DELABOLE and TREHANE SLATE and SLAB COMPANY (Limited).—As the demand for slate and slabs now far exceeds the supply, the Directors of this Company will grant to merchants, contractors, builders, and others, taking shares and contracting for slate and slabs, PRIORITY of SELECTION, Delivery, and other special advantages.—By order of the Board,

HENRY PAINE, Secretary.

TO BRICKLAYERS.—The BRICKWORK of several SIX ROOMED HOUSES TO BE LET. Apply, by letter only, to Mr. CESAR LONG, Architect, 38, Bishopsgate street, E.C.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—"Second festimonial.—"March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now seven years, and I am informed that it is to be adopted generally in the houses that are now being erected here."

N.B. From the above unsolicited testimonial, it will be seen that the CORROSIVE WATER of the Isle of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY-ROAD, LONDON.

POLONCEAU and LIMMER ASPHALTE.

ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the possibility of the formation of vermin. Specimens of ENGRAVED BRASS DIES in most extensive and varied, and designed in the best taste; and their powerful machinery and steam power give them great advantage in the rapid execution of large orders.

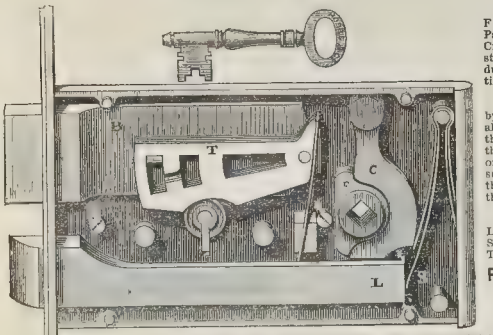
Applications for estimates will meet with prompt attention.

LONDON: 13, SHOE LANE, E.C.



INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

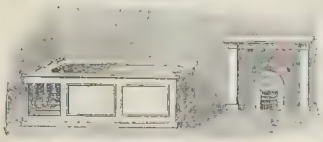
The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming, at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.



ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

HOBBS, ASHLEY, & CO. 76, CHEAPSIDE, E.C.

MEAD'S PATENT PREPARATIONS.—NOTICE.—BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, walnut, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

PRIZE MEDAL, 1862.
HAMILTON & CO.
No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of
C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL PAINTING BRUSHES.

A SUBSTITUTE for PAINT, and at HALF the COST.—STEPHENS'S DYES or STAINS for WOOD.—Mr. STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. E. H. CHICHESTER, of Chittlehampton, near South Molton:—
"The effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church."
H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand exposure to the weather. Light Oak, 4s. per gallon; Middle Tint, 5s. per gallon; Dark Oak, 6s. per gallon; Mahogany, 8s.; Rosewood, 8s.; Walnut, 8s. Varnishes for NAYLOR'S Stains may be had at the Factory, No. 4a, James street, Oxford-street, also Manufacturer of Improved Knotting and Decorative Varnishes.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 3d, High street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

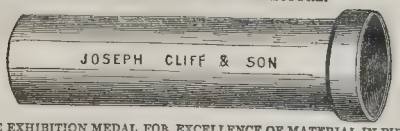
39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo Silicic Acid, and Silicate of Potash. These are the only patents which confer the use of that most valuable agent, Fluo-Silicic Acid Bath, Cann, and other similar stones, when treated by the Company's solution, become extremely hard. The great expense of the restoration of Buildings in Portland stone has been a constant source of Art-Industry, but since the Fluo-Silicic process can be applied to readily lose its stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

WEST DRAYTON GRAVEL PIT. T. FERGUSON, sole proprietor of the above Pits, is n prepared to deliver any quantity of the very finest descriptions GRAVEL, splendid material for road making, garden paths, concre &c. Orders to be addressed at the Offices, Nos. 11, 12, 13, Wharfs, Northsid Paddington Basin, W.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator



for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6

These Ventilators are arranged so that the requisite quantity of Air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 188 and 189 (late 117 and 118), Union street, Borough, London; and all respectable Ironmongers, Builders, &c.

President of the institution, in the chair. Polling commences at TWELVE, and closes at THREE o'clock precisely.

May 22nd, 1863. A. G. HARRIS, Sec.

ARCHITECTURAL PUBLICATION SOCIETY.—The ANNUAL GENERAL MEETING of the SUBSCRIBERS will be held at No. 9, CONDUIT STREET, Regent-street, on FRIDAY evening, the 29th instant.

JAMES FENNETHORNE, Esq.
will take the chair at EIGHT o'clock precisely.
May 20, 1863. ARTHUR CATES, Hon. Sec.

ROYAL HORTICULTURAL SOCIETY.
10TH JUNE, 1863.

CEREMONIAL TO BE OBSERVED AT UNCOVERING the MEMORIAL of the EXHIBITION of 1851, and STATUE of H.R.H. the PRINCE CONSORT, in the presence of their RR.HH. the PRINCE and PRINCESS OF WALES and other Members of the Royal Family.

The Guests invited to take part in the procession will assemble at the West Dome of the Exhibition Building.

While assembling Military Bands will play.

The Royal party will be received at the West Dome entrance by the Executive Committee of the Memorial Committee.

Their RR.HH. will proceed down the Nave to a Balcony over the Southern Entrance of the Horticultural Gardens, and their arrival will be announced by a flourish of trumpets. "God Save the Queen" will be played by the 3 Military Bands united in the Arts-Garden.

The Council of the Horticultural Society will present an Address.

Military Bands will again play.

After which the Memorial Committee will read an Address

H.R.H. the Prince of Wales will order the UNCOVERING OF THE MEMORIAL, which will be announced by a flourish of trumpets and a salute of Artillery, after which Military Music will be performed and the Fountains will play.

The Royal Party, headed by the Procession, will then walk round the Gardens, stopping at various points to see the Memorial and the Garden.

The route will be marked by barriers and banners; and it is requested that during the Procession the spectators will remain stationary.

In the event of rain, the line of Procession will keep under the cover of the Arcades.

The Exhibition Building will be thrown open to the Visitors.

GEORGE GODWIN, Hon. Sec. Memorial Committee.
W. W. SAUNDERS, Hon. Sec. of the Horticultural.

ROYAL HORTICULTURAL SOCIETY.
10TH JUNE, 1863.

NOTICE to ARCHITECTS.—The Proprietors of the late Mr. Billing's Patents have secured the services of Mr H H COLLINS, M.I.B.A. of No 19, Portsdown-road, as Consulting Architect, from whom full particulars and the reduced prices may be obtained; or from the Manager, Mr TYLER, 12, Abingdon street, Westminster, S.W.

COMPETITIONS.

WEDGWOOD MEMORIAL INSTITUTE, Burslem. The Committee for Erecting the above have received donations of £21 15s 10d. and 5l. from Mr. Beresford Hope, Mr. J. E. Heathcote, Mr. J. Edge, and the Rev. Dr. Armstrong, as PRIZES for the best DESIGNS, by any Architect or other Artist, for the Treatment in Decoration of the FAÇADE of the INSTITUTE, in all or any kind of ceramic ware, coloured bricks, mosaics, and terra cottas, as structural features of an architectural composition, with the view of creating a systematic interest in ceramic architecture, both among artists and manufacturers. The Committee have appointed Mr. Beresford Hope, Mr. Digby Wyatt, and Mr. J. C. Robinson, Judges. The Designs must be sent in on or before NOVEMBER 1, 1863, and will, after adjudication, be all exhibited, both at Burslem and in the Architectural Exhibition (London), 1864.—Particulars, with block elevation, may be obtained by letter (enclosing a postage stamp) from the SECRETARY of the Architectural Union Company, 9, Conduit-street, W.; and from W. WOODALL, Esq. Longport, Burslem, Staffordshire.

MACCLESFIELD CEMETERY.—The Burial Board are desirous of receiving PLANS, ELEVATIONS, and SECTIONS, with estimates of the cost, of THREE DETACHED CHAPELS, for the Church of England, the Dissenters, and the Roman Catholics. They are to be constructed of stone, and not in an unnecessarily expensive style. Premiums of 15l. 10l. and 5l. will be awarded for the first, second, and third best sets of designs.—The Board to have the right, if required, of retaining any of the designs for which a premium is paid. They must be sent to the Burial Board, Townhall, Macclesfield, on or before the 3rd of JUNE next, and any information may in the meantime be obtained at my Office.

Macclesfield, May 6, 1863. JOHN MAY, Clerk to the Board.

TO ENGINEERS, &c.—WATERWORKS for the BOROUGH of WATERFORD.—The Town Council of Waterford is prepared to receive plans and estimates for the SUPPLY of WATER to the CITY.—Printed specification of the general conditions may be had on application, through the post or otherwise, to JOHN O'BRIEN, Esq. Town Clerk. A premium of 50l. will be paid for the plan approved of.

Town Hall, Waterford, May 5, 1863.

TO ARCHITECTS and OTHERS.—The Committee appointed for BUILDING a NEW BAPTIST CHAPEL on Lake road, Landport, Portsmouth, are desirous of receiving PLANS, ELEVATIONS, SECTIONS, SPECIFICATIONS, and ESTIMATES for the same. The Chapel to contain 1,500 sittings, and the cost not to exceed 2,000l. A Premium of 25l. will be given for the approved Plans, &c. which Plans, &c. are to become the absolute property of the Committee; but the Committee reserve to themselves the right of rejecting the whole of the Plans, &c. if in their judgment there should not be any one suitable for the purpose intended. The Plans, &c to be sent (free of expense) to Mr. CROWTER, 140, Lake-road, Landport, on or before the 24th day of JUNE, 1863, without the author's name, but with a motto. A sealed letter, bearing the motto, and containing the author's name and address, must accompany each Plan or design.—Further particulars may be known on application to Mr. CROWTER, as above.

Portsmouth, May 15th, 1863.

TO GAS ENGINEERS, &c.—The Town-council of Waterford is willing to receive PLANS and ESTIMATES of GASWORKS for the Public Lighting of the Borough.—Particulars can be had from the Town-clerk, JOHN O'BRIEN, Esq. on application through the post or otherwise

CHURCH SEATS.—The Churchwardens of High Wycombe invite Builders to send in to them DRAWINGS of the most approved SEATS of BENCH ENDS for Parish Churches. The Church of High Wycombe, for which such Benches are required, is a very ancient, spacious, and beautiful building, of Gothic architecture. The seats should, of course, be in character with such a church. Durability, comfort, and economy should be considered, and the estimate should accompany the drawings. If will be paid for the drawing most approved to the builder who sends it.—Address, as soon as may be, to the Churchwardens of High Wycombe

FREEMASONS' HALL. The DESIGNS which have been sent in for the proposed New Buildings will be EXHIBITED at St. MARTIN'S HALL, Long acre, on and after MONDAY, the 25th instant from NINE a.m till Sunset. The Exhibition will remain open till the evening of WEDNESDAY, JUNE 3, Architects, members of the Craft, and their friends, will have free admission upon entering their names and residences at the door of their Lodge in the book provided for that purpose.—By order of the Committee,

WILLIAM GRAY CLARKE, G. Secretary.

21st May, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.—NOTICE TO BUILDERS

TENDERS are required for RENEWING LEAD WORK on ROOFS of certain BUILDINGS at the Royal Military College, Sandhurst, Berks

Parties desiring to Tender for the execution of these works must leave their names at this office on or before the 26th day of MAY, 1863. Candidates will be required to take out their own quantities on the spot.

The Secretary of State does not bind himself to accept the lowest or any Tender

Royal Engineer Office, Sandhurst, 19th May, 1863.

COAST GUARD CONTRACT.—Notice to Builders and Contractors.—Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Galloways, near Lydd, in the county of Kent, may inspect the drawings and specification at the Coast Guard Watch House at Rye, on Office hours, between the hours of TEN and FOUR, from THURSDAY, the 21st inst. to SATURDAY, the 6th of JUNE, now next ensuing and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon of the 9th of JUNE, under seal, and directed to the Commodore Controller-General of Coast Guard, and endorsed "Tender for Gallowaye."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or any offer of the Tenders.

Dated this 13th day of May, 1863 at the Admiralty Coast Guard Office 12, Spring Gardens, London, S.W

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of NEW FARM BUILDINGS at Nabbott's Farm, Springfield, near Chelmsford, can inspect the Plans and Specifications at my Office at Chelmsford after the 22nd MAY. Tenders to be delivered to me, at Chelmsford, on or before the 1st day of JUNE The Proprietor does not pledge himself to accept the lowest or any Tender.

FRED CHANCELLOR, Architect.

Pinners' Hall, Old Broad-street, London; and Chelmsford, May 14, 1863.

THE CRAYS GAS LIGHT and COKE COMPANY (Limited).—Contractors are invited to TENDER for the ERECTION of NEW GAS WORKS and MAINS for the Company. The plans and specifications may be seen on and after THURSDAY, the 21st MAY, 1863, at the Office of WILLIAM MAY, Esq. St. Mary Cray, Kent and 2 Adelaide Place, London-bridge, or at the Office of the Company's Engineer, Mr. ALFRED PENNY, Wenlock Iron Works, Wharf Road, City Road. The work is divided into three contracts—Builders' Work, Engineers' Work, and the Laying of the Mains; but may be tendered for in one contract or separately. Tenders to be endorsed "Tender for Gas Works," and sent to the Secretary, WILLIAM MAY, Esq. 2, Adelaide Place, London Bridge, on or before TUESDAY, the 2nd day of JUNE, 1863.

[For remainder of Contracts see next Penny.

CONTRACTS.

TO BUILDERS.—TENDERS are required for the ERECTION of TWO SEMI-DETACHED VILLA RESIDENCES, at Anerley. The Drawings and Specification may be seen on and after MONDAY, the 25th inst., at the Office of Mr. H. CLARK, North-street, Lewes. Sealed Tenders to be delivered at "Tender for Villas at Anerley," and addressed to GRANTHAM, Esq., Ship-street Chambers, Brighton, on or before MONDAY, the 8th day of JUNE next. The proprietor does not bind himself to accept the lowest or any Tender.

TO STONE MASONS, MERCHANTS, and QUARRYMEN.—The Local Board of Health for the District of West Ham, in the County of Essex, require several MILES of GRANITE CURB and they hereby invite TENDERS to be sent to them who may be willing to Contract with them for supplies from time to time. Specifications and conditions may be seen, and Lists of Tenders sent in, by applying to Mr. MARSHALL, C.E., the Surveyor to the Board, at his Office, at Rokeby House, Stratford, E., and Tenders are to be sent to me on or before MONDAY, JUNE 8th. By order of the Board,
CHARLES WILSON, Clerk.
Rokeby House, Stratford.

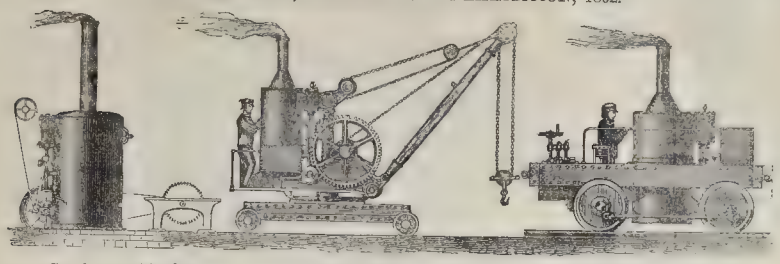
WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the County of Essex, are prepared to receive TENDERS for LAYING GRANITE CURB, and also for supplying Road metal and labour as may be required in making and repairing the streets called Stratford-street, Newton-street, Crawford-street, Sebastian-street, Arkwright-street, Prince-street, Bridge-street, Upper, Middle, and Lower Fox Streets, Montes-mews-street, Rathbone-street, Pitt-street, Burke-street, and Clarkson-street all in Hallsville, within the district, according to such sections, levels, and conditions as are prepared by Mr. MARSHALL, the Surveyor of the Board, and which may be seen at the Office, at Rokeby House, in Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed "Tender for Kerbs," to be sent to me, on or before MONDAY, the 8th of JUNE next. By order of the Board.
CHARLES WILSON, Clerk.
Rokeby House, Stratford.

TO BUILDERS.—TENDERS are required for BUILDING a SCHOOL CHAPEL, with VESTRIES, &c. at Grove road, Mile-end. The drawings and specification may be seen on application to Mr. W. HUME, 5, Auckland road, Edmund-road, Old Ford, E. between the hours of TWO and EIGHT p.m. daily. Tenders to be sealed and delivered to Mr. H. C. WARD, 44, Normanroad, N. till Box at Office is Six o'clock p.m. on SATURDAY, MAY 30th. The Committee do not bind themselves to accept the lowest or any Tender.

TO BUILDERS.—Parties willing to TENDER for the ERECTION of a PUBLIC HALL, at TUNBRIDGE WELLS, in the county of Kent, may inspect the drawings and specification, at J. COLBRAN'S, Esq. Tunbridge-Wells, on the 27th inst. Copies of the quantities may be obtained at the Office, on application (including the Carriage) to be sent to J. COLBRAN, Esq. on JUNE 1st endorsed "Tender for Public Hall." Neither the lowest nor any Tender will necessarily be accepted. Quantities by Mr JOSEPH SIMMONS.
JAMES WILSON, F.S.A. Architect, 1, Belmont, Bath

TO BUILDERS. — Holdgate, near Much Wenlock, Salop.—Plans, Specification, Conditions of Contract, and Quantities for the CARCASE of a NEW PARSONAGE HOUSE for this parish may be seen at Mr. ESPS Farmer, Station to Lord Mary Wellesley, and TENDERS to be sent on or before the 1st day of MAY, to my Office, as below. The lowest or any Tender not necessarily accepted.
JOHN P. SEDDON, 7, Whitehall, London

SCAFFOLDING for a CHIMNEY-SHAFT. WANTED, a CONTRACT for.—Address, LLOYD'S Paper-mills, Bow Bridge, near London



THE CAMBRIDGE MUSIC HALL.—Builders willing to TENDER for BUILDING the above HALL will COMMUNICATE, by letter, post-paid, to the Architect, who reserves the right of selection to whom bills of quantities will be forwarded.
HENRY McCALLA, C.E. Architect.
Office, 25, Westbourne-place, Eaton-square, S.W.

NORTH-EASTERN RAILWAY.—To CONTRACTORS, BUILDERS, and IRONFOUNDERS.—The Directors are prepared to receive TENDERS for the ERECTION of an ENGINE-STABLE at Stanley, and CHIMNEY-SHAFT at Shaw's Quarry, and such information obtained, on application to Mr PROSSER, the Company's Architect, York, on and after the 22nd instant. Sealed Tenders, inscribed "Tender for Engine Stable," to be delivered to the Secretary, at York, not later than WEDNESDAY the 3rd JUNE. The Directors do not pledge themselves to accept the lowest or any Tender.
J. CLEGHORN, Secretary.
York, 14th May, 1863.

WAKEFIELD WATERWORKS COMPANY.—To CONTRACTORS. The Directors of the Wakefield Waterworks Company are prepared to receive TENDERS for the CONSTRUCTION of FILTER TANKS, GATE-KEEPER'S COTTAGE, SAND and TOOL SHED, and other Works, at the Upper or service Reservoirs, situate at Field Head, in the Township of Stanley; and also for New Mains and Alterations required in the ERECTION of a CHIMNEY, with the necessary Brick and Culvert Drains to Boilers, the Removal of Earth to depth and Board, and the Laying of and additional Boiler, and the Alterations required in the Steam Pumping Boiler House, all of and near Wakefield, and their Works at the Stanley Pumping Station, situate at Stanley Ferry, in the township of Stanley aforesaid. Drawings and specifications may be seen at Isaac Lister's Office, Bank Top, Wakefield, and their Works at the Stanley Pumping Station, Stanley Ferry, in the township of Stanley aforesaid. Drawings and specifications may be seen at Isaac Lister's Office, Bank Top, Wakefield, and their Works at the Stanley Pumping Station, situate at

CHAPLIN'S PATENT PORTABLE STEAM ENGINES AND BOILERS.

PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.

Stationary Engine. From 1 to 30 Horse Power. **Portable Steam Crane.** 1 to 30 Tons. **Contractors' Locomotive.** 6 to 27 Horse Power.

From the strength, simplicity, and compactness of these Engines, they are now extensively used for general purposes; also in situations where Steam Engines of the ordinary construction cannot be applied.

Stationary Engines,—require no building in, nor chimney stalk, and with our Patent forced combustion apparatus, will burn inferior qualities of coal, wood, or peats. These Engines are specially suited for shipment, and may be packed inside the Boiler to economise freight.

Portable Steam Cranes,—for wharf or railway, with wrought-iron carriages on wheels, link motion, foot brake, &c., all under the easy control of one man; the larger sizes hoist, lower, and turn round in either direction by steam.—*These Cranes were selected by H.M. Commissioners for receiving and sending away the heavy machinery at the International Exhibition of* 1862.

Contractors' Locomotives,—are adapted to work on rails or tramways of a gauge from two feet upwards; they are complete and efficient Locomotives, simple in construction, and the working parts easily got at for repair; they draw heavy loads at reduced speeds. These Engines are usually sent in one package, ready for work on arrival.

LIGHT PORTABLE, HOISTING, WINDING, AND PUMPING ENGINES, &c.

ALEXANDER CHAPLIN & CO. CRANSTONHILL ENGINE WORKS, GLASGOW.

OFFICE, 9, Adam Street, Adelphi, W.C.; LONDON DEPOT and WHARF, Lower Fore Street, Lambeth, S.

Engines of each class KEPT IN STOCK for SALE or HIRE, and all our Manufactures GUARANTEED as to EFFICIENCY, MATERIAL, and WORKMANSHIP.

Parties are cautioned against using or purchasing Imitations or Infringements of these Patent Manufactures.

TO ARCHITECTS AND BUILDERS, RAILWAY CONTRACTORS, &c.

MANUFACTURER OF WROUGHT-IRON GIRDERS

Designed and Guaranteed as to Strength.

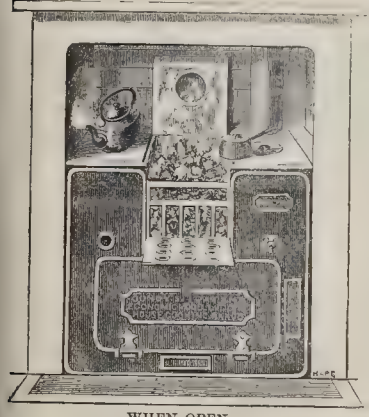
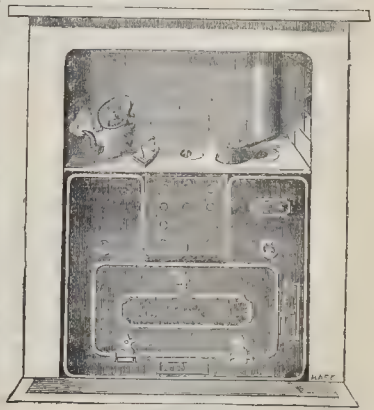
AND EARTH WAGGONS COMPLETE.



CAST-IRON RAILWAY CHAIRS, WROUGHT CHAIR-SPIKES, FISH-BOLTS, AND RAILWAY STORES.

MATTHEW T. SHAW, 64, CANNON STREET, LONDON BRIDGE, E.C.

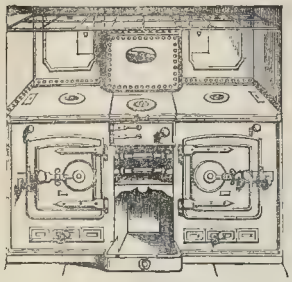


Orders requiring Despatch and Punctuality can be executed in a few days.

CUNDY'S MULTUM IN PARVO ECONOMIC POOR MAN'S KITCHENER.

WHEN OPEN.

These drawings represent a Stove of the following dimensions:—24 inches long, 24 inches high, and 15 inches deep, when used as an open fire-stove, and also when closed, for BAKING, BOILING, and IRONING. The oven, which is placed underneath the fire, is 18 inches long, 14 inches deep, and 11 inches high. The flue passes all round the Oven, and the Boiler will contain six gallons of water. This Stove, which is also made 30 inches long, 26 inches high, and 15 inches deep, is admirably adapted for BACK KITCHENS, as an auxiliary Cooking Stove, and for STILL-ROOMS, NURSERIES, and SMALL HOUSES, the consumption of coal being only 112 lbs. per week. This Stove, also Cundy's Patent BRICK OVEN Double Fall-down Bar KITCHEN RANGE; also Cundy's Warm-Air Ventilating Stove, suitable for CHURCHES, HALLS, STAIRCASES, and SCHOOLS, for which invention Mr. Cundy received the SOCIETY OF ARTS MEDAL, also a Medal from the Royal Commissioners of the GREAT EXHIBITION of 1851, can be seen in operation daily, at the Show-rooms of THE MANUFACTURER,



WHEN CLOSED.

WILLIAM ADDIS, Nos. 6, 7 & 15, LEICESTER-ST. LEICESTER-SQUARE,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,

Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.

A PROSPECTUS AND REFERENCE WILL BE FORWARDED ON APPLICATION BY LETTER.

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit

WILLIAM S. BURTON'S SHOW-ROOMS.

They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and General IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments, 3*l.* 15*s.* to 33*l.* 10*s.*; Bronzed Fenders, with standards, 7*s.* to 5*l.* 12*s.*; steel Fenders, 3*l.* 3*s.* to 11*l.*; ditto, with rich ormolu ornaments, from 3*l.* 3*s.* to 18*l.*; Chimney-pieces from 1*l.* 8*s.* to 100*l.*; Fire-irons, from 2*s.* 3*d.* the set to 4*l.* 4*s.* The Burton and all other Patent Stoves, with radiating hearth-plates.

IMPORTANT to BUILDERS and OTHERS

having circular saw tables.—The Advertiser, WILLIAM SKETCHLEY, having invented and perfected an IRON DISC for PLANING FLOOR BOARDS to any width and thickness required, calls the attention of builders and others to the importance of and immense saving effected by it. The Disc is attached to the spindle with as little trouble as the circular saw, and I will prepare the surfaces of ten squares per hour. To give orders or for information apply to the Inventor, WILLIAM SKETCHLEY, 7, Turton-street, Weymouth.

PERIN'S PATENT BAND SAW BLADES.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

To BUILDERS, CARPENTERS, and BLIND MAKERS
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends them in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774.

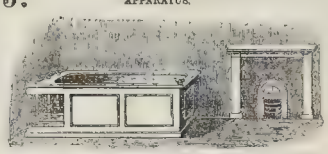
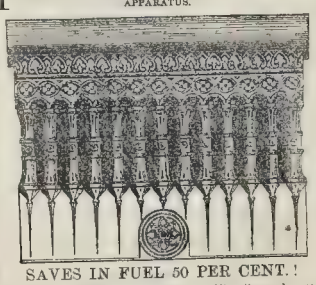
SAVING IN GAS.

D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.
D. HULETT & CO. 55, High Holborn, London,
Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.



RICKETT'S & HAMMOND'S VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation.



The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET, STRAND, LONDON, W.C

Manufacturers of Silicates of Soda and Potash, Aluminates of Soda and Potash,

PATENT INDURATING SOLUTIONS,

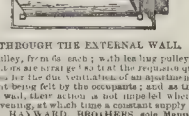
For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING STONE, CEMENT, STUCCO, &C.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

69, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.



PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

WEST DRAYTON GRAVEL PITS.

T. FERGUSON, sole proprietor of the above Pits, is now prepared to deliver any quantity of the very finest descriptions of GRAVEL, specially adapted for road making, mortar, paths, concrete, &c.—Orders received at the Offices, Nos. 11, 12, 13, Wharfs, Northside, Paddington Basin, W.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the exterior wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London; and of all respectable Ironmongers, Builders, &c.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4l. per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge. OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

BATH STONE OF BEST QUALITY.

BATH STONE OF THE BEST QUALITY

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. While this is under the name of "Improved Zinc Paint," or as the number Two or three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

INTERNATIONAL EXHIBITION, 1862

DOWGATE HILL, London; and 2, GOREE PIAZZA, Liverpool.

The Builder.

VOL. XXI.—No. 1059.

The Proposed National Albert Memorial.

IN our present Number we give a view and plan of the design, by Mr. G. G. Scott, which has been selected for the National Memorial of His Royal Highness, the late Prince Consort.* The architect was unjust to himself when, by an expression in his written explanation (given in our Number of April 18th), he led those who had not seen the design to suppose it to be an "Eleanor Cross." It is true Mr. Scott, in this explanation, disclaims the idea of taking any ancient type as his guide. He says, "I have not followed any existing type, but have struck out one suited, to the best of my judgment, especially to this individual object;" but the impression was given. The term "Eleanor Cross" may be considered as used only in the same conventional sense as that in which the word "Mausoleum" is applied to sepulchral edifices bearing no analogy at all to that of King Mausolus.

The leading idea of the design is founded on what is of necessity its most important and central object—the Statue of the Prince himself; and the great aim has been to add dignity to this statue, and to render the design expressive of the sentiment with which it is regarded.

The statue,—which is in a sitting posture, representing the Prince as clothed in the robes of the Order of the Garter, and is placed in an elevated position on a raised platform,—is overshadowed by a vast and gorgeous canopy, not so much for physical protection as for the enhancement of its dignity. To carry out this view, the canopy is treated almost with the richness of a shrine, or (one may say) of those imaginary structures of which ancient shrines took the form of the models. It is about 30 feet square, and is supported at the angles by groups of columns of polished granite. The material for the mass of the structure is not yet determined, but the aim is that it shall unite brilliancy with durability. Whatever the material may be, it will form but a groundwork for richer inlayings. The gables and spandrils will be filled in with mosaic pictures, relating, probably, to scenes in the life of the Prince Consort; and other parts will be enriched by decorations in gilt and enamelled bronze, polished stones (such as crystals and cornelians), and other objects calculated to add to its brilliancy and beauty. The pinnacle-work, or *flèche*, rising from the roof of the canopy, as well as the covering of the roof itself, and the cresting of the gables, will be wholly of gilt and enamelled metalwork, which, in the hands of Mr. Skidmore, may be expected worthily to exemplify this special branch of the art-progress of our day.

The canopy rises from a lofty and solid basement or *podium*, which is surrounded with sculpture in high relief, representing, in figures of life-size, the history of the arts of painting, sculpture, architecture, and music; something after the manner of Delaroche's *hemicycle des beaux arts*. On pedestals projecting from the angles of this *podium* are groups illustrative of others of the arts and occupations of Peace; as commerce, agriculture, manufactures, and engineering; and on larger pedestals, at the extreme angles of the flights of steps which surround the platform, are groups having reference to the contributions of the four quarters of the globe to the International Exhibitions. The detached figures which decorate the canopy itself, represent the principal sciences and the Christian virtues; while the whole design is terminated by a richly gemmed cross, supported by angels. The square of the base of the platform will be between 130 and 140 feet, and the entire height of the monument about 150 feet.

One leading object in the design was the union in one great work of the various arts which the Prince so anxiously fostered; and we need hardly say that one pre-eminently necessary condition to the success of such a work is the earnest and hearty co-operation of the different artists who will be engaged on its realization. Architects, sculptors, designers, and workers of mosaics, workers in metal, architectural carvers, and those who carry out the structural portions of the work ought to labour together *as one man* in their endeavours to make this monument at once the most perfect work of art which our age and country can produce, and at the same time perfectly *at unity with itself*, so that every work of art which contributes towards its magnificence should be in perfect harmony with every other work of art and with the entire conception of the design. Especially is it important that the architect and the sculptors should heartily and in all confidence and goodwill work hand-in-hand together. There is now one of the noblest opportunities which can possibly offer for uniting the three sister arts, and bringing these wanderers back into one family after their long severance. Let us hope it may properly be made use of. We may gather Mr. Scott's own views on this point from a passage which we subjoin from a paper recently read by him before the Philosophical Society at Leeds:—

"There is a marvellous consanguinity between the best Mediæval sculpture of the thirteenth century and that of the Greek period, just when it had thrown off archaicism, but not begun to lose its pristine purity. In bringing these two in contact lies the hope of future art. *Neither* should be copied; *neither* style should be, strictly speaking, revived. The *sentiment* of the two must be united, and the perfect art of Greece *warmed* with the deep feeling of the Gothic period, and that by men not only capable of appreciating each, but capable of uniting them in art; nor copied or even imitated from either, but the emanation of their *own souls*. This is, after all, *the* great development which we need. We want the master-mind which is capable of distinguishing the *essentials* from the *accidents* of art; which can sever its beauties from its defects; which can distinguish noble elements when nearly hidden under conventional overlays, and can retain the one while rejecting the other; which, after buying the field for the jewel it contains, can *find* and *retain* the jewel while rejecting the earth from which it is dug; but which will not use even this jewel just as he finds it, but will transfer it to a *setting* of its own. To drop metaphor,—we want artistic accompaniments to our revived architecture, which shall be no pedantic reproduction of an old style, but which shall cull from it all that is real and noble in its sentiment, and render them anew in art of the highest possible grade."

Much of this is so precisely what we have ourselves often written that we have only to say, we hope it may be carried into practice. Everything will depend on the sculpture. This will be the life or the death of the monument. We must have no working *down* to Mediæval quaintness, but a working up to the highest style of art superfused with sentiment. We must have no wilful distortion or studied incompleteness, but the best possible art that the century is capable of. Means should be taken at once to determine as to the men who are to be employed, so that their thoughts may be led into right channels.

These considerations of course involve the subject of outlay. Though the subscribed fund has been liberally supplemented by Parliament, it must be clear to any one who considers the great amount of sculpture and decoration which the design contains, that there is ample room for the expenditure of any additional subscriptions which may be received. The subscription fund should by no means be considered as closed. Many important questions which may arise as to the materials (whether of architecture, of sculpture, of mosaic work, or inlaying), and as to the artists to be employed;—questions involving, in a greater or less degree, the beauty and the durability of the work and the art expended upon it;—must of necessity depend upon the funds at command: and it is almost needless to say that such a work as a Memorial of our Blameless Prince ought in no degree to be hampered by little questions of cost. We trust, therefore, that the public will take care that no such shackles be imposed upon the work, and will by no means view the subscription voted by Parliament in the name of the nation as closing the list, or as shutting out the future contributions of individuals who, knowing now what the Memorial is to be, may be led to take increased interest in its success. Help may also be afforded in the way of gifts more in *kind*. This, however, involves very delicate questions. No one but the architect can judge how far such gifts are suitable, or even admissible. Everything must be of the *very best*, and nothing admitted which is not the very best, merely because it is a gift. Again, everything must be in harmony; and when one scale of materials or work is determined on, no gift, however valuable, should be allowed to disturb its harmony, nor should questions claiming the most grave consideration be influenced by the mere accident of the offer of a contribution in kind. The artists engaged on the architectural decorations must be selected by and must work under the direction of the architect, so that no offers of this kind must be allowed to disturb his arrangements; much less must any merely advertising offers be entertained, or the work may be irreparably damaged. One class of object, however, is especially open to offerings of this kind, viz., the stones for inlaying, and (if it may be so described) for *gemming* the canopy. What is wanted for this purpose is not *marbles*, as their polish would not last, but actual *pietra dura*, crystals, agates, cornelians, malachite, amethysts, porphyry of brilliant colours, and other objects of a similar kind; and it must be remembered that these must be of large size, or they will not tell in a work of such dimensions. Persons, however, offering such contributions, should not feel annoyed if they are not found suitable, as it is only those engaged on the designing and directing the execution of the work who can be expected to form an ultimate opinion on such questions.

One word as to the direction of the works. The Memorial originated with the popular voice, and we would retain for it the popular character. The small committee named by Her Majesty, when called upon to say what shape the Memorial should take, has fulfilled its mission. Let it die: and let the responsibility of completing the work return to the committee appointed for that purpose by the public meeting held at the Mansion House under the presidency of Mr. Cubitt. This committee includes men of ability of all kinds, and could appoint from its ranks an executive body eminently capable of insuring a satisfactory result. The English people began the good work: let the English people finish it.

* See p. 371. The drawing was made for us by Mr. Drayton Wyatt, under Mr. Scott's own direction, so that its correctness may be depended on.

THE ROYAL ACADEMY.*

We are glad to see that Mr. David Roberts is continuing his illustrations of Modern London. (114) "St. Paul's from the River Thames, looking West," and from an east view, as might be expected, is admirably adapted for picturesque treatment. Mr. Horsley's silvery clear colour and knowledge of daylight effects, invest very trivial uses of them with their own value. "The Morning of St. Valentine" (157), in which a very pretty coquette finds enough in her looking-glass to account for the importunities of letter-writing lovers, is charming, slight as it is. Mr. J. F. Lewis's reproduction in oil of his well-known water-colour drawing, "a Frank Encampment in the Desert of Mount Sinai" (158), has increased solidity, but in most respects is inferior to the original. Of Mr. W. C. T. Dobson's three works, all imbued with that sentiment for simplicity peculiar to him, "Frühling" (181) and "At the Well" (308) are preferable to, because more natural than, his Scriptural subject, "The Holy Family returned from Egypt" (340). The pure and exalted character of this and similar performances, nevertheless, entitles Mr. Dobson to great and respectful admiration. Mr. H. O'Neil cannot be congratulated upon "The Power of Music" (398), which is by no means calculated to support his reputation. "Roman Beggars at a Church Entrance" (454), by M. R. Lehmann, is deserving attention for its essentially French academic qualities; and so is Mr. J. Gilbert's reminiscence of Velasquez, "An Army on the March — The Rearguard with Baggage-waggons" (480), for qualities just as great, but idiosyncratic. Mr. Rankley has never painted anything to beat his present picture, "A Sower went forth to sow," though his name be appended to much he may be proud of. The young dark-visaged vagabond in the foreground is a most annunciative study of gipsy character, such as we see it in our days. The performance throughout is marked by a matured skill. There are great refinement and intense pathos in Mr. G. F. Watt's "Ariadne" (523), hopelessly watching for the return of her lover, Theseus. All Mr. Watts does is expressive of an exquisite feeling for poetry, and this work may be particularized. With less delicacy of expression, Mr. E. Armitage belongs also to the eclectic class of painters. His "Burial of a Christian Martyr in the Time of Nero" (622) tells of his foreign education, and proves his possession of extraordinary knowledge and masterly acquirements. Mr. R. Ansdell exhibits his best characteristics in his well-studied representation of "A Wrecker" (468),—one of those Cornish notabilities, half pirate half cadger, associative with stormy weather, sea-beaten coast, and the drifting spoils that make up the picture. His carefully precise execution has realized the utmost worth of his materials.

Amongst the concessions and extension of benefits that seem to be anticipated from an expected modification of Royal Academy laws, it would certainly be reasonable to include some mode of distinguishing lady members of the profession, by identifying their relative claim to such honours as are awarded to their brother artists. This, however, is a matter requiring grave consideration; and such an equalization might be objected to by those to whom at the first thought it would appear most welcome: for example, if Mrs. E. M. Ward were as disputations in her nature as she is in her art, the determined manner in which she insists upon a full moiety of eminence with her husband would be as unseemly as it is now graceful—reflecting, as it does, much of what she has learnt from him. Her picture of "Queen Mary taking leave of her Child" (386), is admirably painted—with a vigour which leaves the womanly instinct that selected so charmingly sympathetic a subject, the only clue to its being the work of a lady, and while provoking comparison with masculine emanation places Mrs. Ward at the head of her sister contributors.

To casual observer it would be somewhat difficult to account for the many complaints of injustice or want of judgment that are heard on the present occasion against those always well-abused and never-to-be-envied plenipotentiaries the hangers. With so poor a representation of the members themselves, an unusual opportunity has occurred to other painters not immediately connected with them: and from as much as is to be seen within the walls, one can hardly reconcile on the present occasion the special call for a more than ordinary amount of stricture, with the extra advantages of favourable position so extensively shared by younger members of the profession. It seems certain, however, that some excellent pictures were rejected.

Much more blame attaches itself to the advisers of some of the members contributing; who, however well they may have assisted formerly in upholding the prestige of a Royal Academy exhibition, would be wise now to rest content with their old reputation and not strive so industriously as they do to make a new one. With very few exceptions beyond those in which this selfishly persistent enjoyment of prescriptive right renders them very flagrant indeed, there are not many pictures on the line unworthy of such distinction, however numerous the cases may be of equal though unrecognized claim to it, and to the very general acknowledgment so deservedly awarded to such works as collectively sustain it. The fact of its being pronounced to be above an average exhibition, whilst conveying a compliment to those who have made its character, must reflect credit upon its arrangement in proportion to the opportunity afforded for arriving at such a conclusion.

Mr. P. H. Calderon has taken a long step this year in advance of the last of his works: it is gratifying to find such instances of ripening promise as his earlier pictures were, succeeded by such an improvement upon them as this. "The British Embassy in Paris, on the Day of the Massacre of St. Bartholomew, August 24, 1572" (378), as described in Aikin's "Memoirs of Sir Dudley Digge's Complete Ambassador," furnishes him with a rare opportunity for diversified expression, and he has taken the fullest advantage of this, and has been able to realize a very probable representation of such a shelter as Sir Francis Walsingham's house became to those of the English residents in Paris who had sufficient presence of mind to resort to it in their emergency. Of Walsingham's personal safety the perfidious young king and his detestable mother (Catherine de Medicis) were, for their own sakes, careful, and all who took shelter in his house found it an inviolable sanctuary. Men and women are gathered together, some round the window looking into the street below, watching for relatives or friends, and the proceedings of the butchery; others wounded in their hurried flight from their beds, with no other apparel than their night gear, and such articles as their good friend, the ambassador, could lend them at the moment, are variously influenced by terror, rage, or grief, unnoticed by him who, taken by surprise, paces up and down the room, with head bowed down in thought, and hands folded behind, crushing a letter that has not assisted him to penetrate the mystery of the horrible business which so perplexes him. This picture is worthy of great praise for its admirable technical qualities, its only drawback being the necessity of a description to elucidate the story. Mr. M. Stone's "On the Road from Waterloo to Paris" (315), betokens improvement, but he will have to guard against affectation and prettiness; the stagy gloss of a theatrical wardrobe belies and ruins such a composition as this, which must depend entirely upon verisimilitude for success. Mr. Marks is always original, either in narrative or as narrator, and his feasible supposition of "How Shakespeare studied" (261), will at once be accepted, although his Bill at sight may not be. It was a capital notion to bring together types of such characters as the great dramatist modified to his purposes, and these, so accurately suggestive of Dogberry, Shallow, Slender, Pistol, and Bardolph comprehensiveness, very strikingly contrast the unlikely Shakespeare.

Mr. A. H. Barr is to be congratulated for having adopted a more independent method of asserting his rapidly acquired position; few painters have so suddenly made themselves known, and Tennyson has evoked from him qualities that induce great expectations for him. His "Scene from Dora" (250) not only evinces admirable executive skill, but a rare apprehension of expression with power to match in dealing with it. Substituting humour for pathos, Mr. J. Barr, in (425) "A Travelling Tinker," appears to be similarly gifted. Mr. V. C. Prinsep also promises to become distinguished, although at present he depends more upon exciting astonishment at his extravagant disregard of any taste but the conventional one coherently his own than by appealing to the sense of what may be more generally accepted as pleasant or agreeable. His predilection for ugliness utterly destroys all the interest for such a phase in the course of true love as an estrangement would enlist for tolerably good looking victims of "Whispering Tongues," and forcibly suggests that truth might have been poisoner rather than poisoned, if these participators in plainness only ignored their particular share of it. In this picture (423), and in "Il Barbagianni" (391), there is so much conscientious study manifested, with many other merits peculiar to them claiming great consideration, that whatever may become subversive cannot be too strongly warned against.

Mr. E. Crowe will add to his reputation by his clever illustration of how the death of Goldsmith was mourned by those outcasts of the great city to whom he had never forgotten to be kind and charitable,—"Brick-court, Middle Temple, April, 1774" (359). Mr. J. B. Burgess has an aptitude for depicting the variety of emotions supposed to be incidental to a postal delivery of letters. "A Spanish Post-office" (351) depends chiefly for its national ascription upon the costume adorning cosmopolitan actors; the scene is a lively one, and if the *dramatis personæ* are a little too demonstrative, they secure the success of the little drama, and greatly to the credit of the author. This, again, is an earnest of increasing promise and power. Mr. W. F. Yeames makes a new dress from the most threadbare of materials, and creates a fresh interest for the "Meeting of Sir Thomas More with his Daughter after his Sentence to Death" (522), by succinctly telling his version of the story, with some good drawing and solid painting to help him. "True to Death" (565), by Mr. C. Goldie, and "The First Sight of the Armada—Lighting the Beacon" (569), by Mr. J. E. Hodgson, will repay inspection. "A Sick Call" (586), by Mr. M. J. Lawless, is entitled to be placed amongst the most strikingly original conceptions here, and exhibits qualification for greater achievement still. "The Death of Jean Goujon" (611), by Mr. E. H. Wehnert; "The Token of Flight to Robert the Bruce" (621), by W. J. Grant; and "Life or Death" (628), by J. Hayllar, are noteworthy. (441) "A Reconciliation," F. B. Barwell, has some good points of interest (452) "The Trio," by J. Pettie, some quaint character and good workmanship. Mr. S. Solomon's "Betrothal of Isaac and Rebecca" (567), Miss E. Osborn's charming "Sunday Morning" (579), and "The Last Chapter" (568), by Mr. R. B. Martineau, with "Juliet and the Nurse" (624), by Mr. R. S. Stanhope, and "The Warder's Summons, 1485" (716), by Mr. G. D. Leslie, are with many other works, deserving of more than a poor note of admiration. With such, however, we must be content ourselves. Space and time fail before will.

* See pp. 325 and 342, *ante*.

ON ARCHITECTURAL AND ARTISTIC METAL-WORK.

In his lecture on this subject, to which we ha referred elsewhere, Mr. Skidmore commenced b saying it would be desirable very briefly to rec pitulate a few of the incidents mentioned in l previous paper, for the sake of the intimate re tion between the metal-work of various eras. T first question he desired to enter upon was t immense extent and value of metallic art in almo every age and country of the world; and th while gold and silver were used for almost every p pose of secular life—such as baths, couches, chai and thrones—they were equally used for fon altars, chandeliers, chalices, shrines, and extend to architectural uses—such as columns, capit roofs, beaten plates for walls, entrances of do ways of palaces, the doors themselves, and, final for covering the floors. To illustrate this he quo from early records and examples. Fifteen centur R.C., 48 pillars were made for the taberna 17 feet high, covered with plates of fine gold, s the bases on which they stood were massive silv weighing 114 lb. each. A few centuries later, Solomon erected the Temple; its porch 120 f high, overlaid with plates of gold. Two mas pillars were cast of brass, 31 feet high and feet diameter; the capitals, also of brass, 8 fee height and diameter. No such columns were England in this day. The greater house had ceiling of fir-tree overlaid with gold, garnis with precious stones. The house, also, was o laid with gold—the beams, the walls, and doors. The holy house was overlaid with gol the weight of 67,800 lb., and this not gilding, plates, the nails being spoken of. Two pil before the house were 61 feet high, with cap of 7 feet high, and adorned with superp work.

The entrance of the house, the inner doors, doors of the Temple, were of gold. For secular he made a throne of ivory and overlaid it gold, with steps and footstool of gold. All vessels for use were of gold. About the same Homer, in describing the palace of Alcinous, s the usage of the period:—

"The walls were massive brass; the cornice high.
Blue* metals crowned in colour of the sky.
Rich plates of gold the folding doors encase—
The pillars silver on a golden base.
Silver the lintels deep projecting o'er,
And gold the ringlets that command the door."

Again, when Telemachus visits Menelaus at Sparta:—

"View'st thou unmoved, O ever-honoured most,
These prodigies of art and wondrous cost?
Above, beneath, around the palace shines
The stainless treasure of exhausted mines.
The spoils of elephants the roofs inlay,
And golden amber darts a golden ray. . . . .
Who eyes the dazzling roofs with vast delight. . .
Then from his glittering throne . . . with
Ivory silvered thick the footstool shone," &c.

Another century later, and the use of metallic art shows itself in the record of wealth destroyed by Sardanapalus when he discovered that Nineveh must fall; destroying by fire, among other works, 150 bedsteads of gold, and a like number of tables of the same material. Among numerous passages of ancient historians bearing on the question, occurs the record of a statue, throne, and table in gold, weighing 90,000 lb.; other instances of three statues weighing 2,800 talents. Crœsus offered to the gods 3,000 head of cattle, and burnt on the pile bedsteads of gold and silver, vials of silver, &c. The residue was cast into ingots, and weighed 86,000 lb.: these were offered at the Temple of Delphi along with a lion of gold weighing 1,100 lb. When the temple was burnt, 490 lb. were melted from it. Also bowls of gold, one of them of great skill and beauty of workmanship, made by Theodorus, the Samian. Herodotus confirms its excellence. He enumerates many like things, including several pillars; and writes, "all these are in existence in my day, but many others are lost." In 432 B.C. Phidias executed his figure of Minerva in ivory, with her golden garment, worth 120,000*l.*, according to the testimony of Thucydides; Jupiter, by the same artist, like Minerva, in gold and ivory, seated on a throne of ivory, gold, and precious stones. Strabo says its height was 45 feet. A century later, 331 B.C., Alexander entered as conqueror into Ecbatana. In the treasury he found 120,000 cwt. of gold, and the columns of its palace covered with plates of gold and silver, and its roof of silver. In Persepolis he found still greater wealth. A few years later, and the Rhodians, to celebrate the successful defence of the city, erected across their harbour the figure of Apollo, 120 feet high. Its proportions would be realized by comparison with that of Havelock in Trafalgar-square,—itself a memorial of the rescue of an incomparably larger empire than the Rhodian states. Livy and Pliny give an interesting account of the brazen threshold of the Capitol at Rome, and the pillars that were removed from Athens. In the subsequent building which was raised, the gold for plating and covering the surfaces with beaten work amounted to 1,350,000 lb. Various other instances might be quoted, but enough had been cited for the purpose.

Was it possible that the long array of architectural metal-work, so costly and involving so much art, should have left no suggestion or found no representation in the stonework of the period? and that those who produced the ornamentation should resort to the objects we assign to them,—"buckle-bones," "reels," "tooth-and-egg," &c., for their inspirations? The answer was, that large numbers of detail ornament, as explained in the previous paper, were the exact counterparts of costly rendering of gold and silver; the treatment true to the material, and of which contemporaneous examples are extant.

Passing to the Christian Church, the fury of persecution crushed all attempts at giving that homage and that costly devotion of all choicest gifts which the Jews directly, and the heathens indirectly and darkly, offered to the Creator of all. An exile in Patmos, St. John gives to the Christian world the Revelation, and in it offers to the gaze and the ultimate beatitude of all the heavenly Jerusalem, a city of gold, with walls of precious stones and gates of pearl. It mattered little for the present inquiry what might be the various and possible views advanced on the meaning of the passages: it was sufficient for the purpose to know that it influenced Theophilus, who travelled to Byzantium and gathered the traditions of Christian arts, instructed his pupils to adopt architectural forms, and represent the golden city in their metallic art: he enters into details, and quotes the words of St. John as a reason for directing the same. Stones the prophet assigns to each of the Apostles, to be used under the respective figures—the jasper, sapphire, chalcedony, emerald, sardonyx, &c.; and the love of symbolism, which has characterized every age of Christian art, and is so evident in the construction of cathedrals and churches, could scarcely fail to be more or less impressed with a symbolism so significant, modified by the actual requirements of the edifices. Regarded in this light, it would be readily understood how a church intended to represent a heavenly type on earth—the heavenly, by revelation, described as of gold and precious stones—should derive its illustration from the very golden representations of the same with which the previously existing buildings abounded. Leaving these considerations for a time, and continuing the narrative of work in gold and silver, the following presented only a fractional portion of lists of costly and precious productions too long for the limits of a paper.

A.D. 328.—Constantine calls artists to Constantinople to enrich the palaces with works in gold and silver. He presented to the churches at Rome* crosses of gold weighing 300 lb., large patens of gold, chalices, lamps, lustres, fonts, and altars of gold.

583 to 659.—Eloy, from an artisan (pupil of Abbon, Master of the Mint), rose to be an eminent goldsmith, Master of the Mint, and Bishop of Noyon. He made for Clothaire II. two thrones enriched with precious stones; for Dagobert I., a large cross of gold, and set with precious stones, for the basilica of St. Denis, the marble roof of which was covered with gold and gems. When bishop he founded the monastery of Solignac, near Limoges, in which he assembled monks skilled in the art. Princes and bishops followed his example, for the express purpose of producing work in gold and silver.

684.—From an account in the Bodleian at Oxford, of Glastonbury Church, we find King Ina caused to be built a chapel of gold and silver, together with ornaments and vessels of silver and gold.

For the ornamentation were used 2,640 lb. of silver; for the altar, 264 lb. of gold; for the candelabra, 12½ lb. of gold; for the binding of gospels, 20 lb. of gold; and for other purposes, 45 lb. of gold: statuettes, 178 lb. of silver and 28 lb. of gold, the vestments being woven on both sides with gold and precious stones.

772 to 814.—Charlemagne restored the arts, and founded basilicas and supplied them with costly vessels of gold and silver: he had in his own possession tables, &c., of gold and silver. His body in the tomb was seated on a throne of gold, and was exhumed for the sake of these treasures.

795 to 816.—Leo III. gave works in metal and precious stones, weighing 1,075 lb. of gold and 24,900 lb. of silver.

835.—The magnificent altar of gold now remaining at the church of St. Ambrose, at Milan, consisting of enamels, precious stones, with figures of Christ and Twelve Apostles, a work of great richness and beauty.

813 to 879.—Church of St. Stephen, in France, endowed with altar tables of silver. Abbon by his will caused the high altar to be overlaid with gold and gems.

849 to 872.—King Alfred went early to Rome, was acquainted with the Continent and its works of art—kept goldsmiths and other artists at his own expense.

867 to 976 was remarkable for the profusion and richness of metallic works in gold, precious stones, and pearls,—the Emperors and others giving costly tombs, &c. Constantinople was a seat of these manufactures. The Doge Orseolo ordered, A.D. 976, from thence the splendid shrine of enamel and gold work now preserved at St. Mark's, Venice. At this time, the marriage of Otho III. with the Greek Princess Thophania, drew the Byzantine artists in metals to the German court.

1017 to 1031.—William of Malmesbury says, Canute gave great gifts to Winchester, which displayed such magnificent liberality as astonished the minds of strangers; the quantity of precious stones and jewels dazzled the sight of the beholder.

1003-1024.—The Emperor Henry II. presented many pieces of gold and silver work of great consequence. An altar front remains, given to the Cathedral of Bale. The example of the Emperor acted on the bishops; and we find, among others, the Archbishop of Mayence presenting a crucifix weighing 600 lb. of gold, and the Bishop of Heldeshiem, himself a goldsmith, giving another enriched with filagree and gems.

1041.—William of Malmesbury says the Cathedral at Coventry was enriched with so much gold and silver, that the walls seemed too narrow to contain it, in the reign of William Rufus. Robert de Limesi removed from one beam that supported the shrine 500 marks of silver.

1066.—Waltham Abbey Church Harold had ornamented with plates of copper, and plated with gold (the capitals of the columns and the bases and mouldings, with great skill on the part of the workmen). He had also an altar made of pure gold, and vessels of gold for chief days, and silver for feasts.

About this period, in the East, the wealth in precious metals, chiefly in gold, was incalculable. Mahmud took from a single temple 760,000 gold coins, golden vessels 28,000 lb., and bars of the same 1,600 lb. At Guzerat he robbed a temple of 56 columns of massive gold set with stones, and a chain weighing 1,860 lb.

About 1152, among other works particularly to be mentioned, is the shrine of the Three Kings of Cologne, of gold, enamel, and gems.

Thirteenth century.—The shrines at this period were much used in the form of churches or tombs, as that of St. Saurin at Evereux, and St. Romain at Rouen.

1290.—Mulik Alleh took at Devgir, capital of Ramadeva, 15,000 lb. weight of gold, 175 lb. weight of pearls, and 50 lb. weight of precious stones.

Fourteenth century.—Reliquaries in the form of churches were restricted to cathedrals; chapels and oratories were enriched with figures in gold and silver which contained relics. Goldsmiths' art in this century was of such extent as would scarcely be credited in the present day. The inventories of Charles V., 1369, comprise treasures estimated at nineteen millions. At this time were commenced two of the most important works which have come down to us—the altar at Pistoia, and that at Florence. For more than 150 years the most skilful goldsmiths of Italy were engaged on these two monuments of art. A long list of artists in gold might be added, would time permit.

Illustrations were given of the various modes of working metals, from the fifteenth century before Christ to the fifteenth century after, illustrated by existing examples. These received a treatment in harmony with the known qualities of metals, the various forms and arrangements in accordance with ductility, malleability, and constructional necessity, and therefore true to the material. Numerous details were exemplified by reference to diagrams, models, and also actual work in progress. These were compared with stone examples, the absolute necessities of the metal construction being represented to the minutest details in the stone; with, in other instances, the addition of a fragmentary and unsightly piece of stone, attached to give support, and evidently not part of the original design,—as in many French capitals, the originals of these in gold and silver were shown to need no such support, being able to maintain themselves without such addition. The identity of form being entire, it was evident that the original type was that which needed no violation of, or addition to, the form, to render its production practicable and enduring. A similar treatment of statues was referred to, where an additional piece of fragment, generally unsightly, was added to give stability to the figure. In all instances it required little argument to prove which was original. In the short limits of a report, without the numerous examples illustrated by drawings and actual goldsmiths' work, it would be impossible to convey any notion of the evidence adduced. In conclusion, it was remarked that the Byzantine and Mediæval monasteries, many of which were founded for the cultivation of metallic art, were the great schools of such work; and that monastics frequently enlarged and re-erected their own buildings. It was more reasonable to suppose they would choose for types of ornament the costly objects of the sanctuary on which they had expended years of toil and thought than, having done so, to turn into the wood-yard for a billet to fill a moulding, or the kennel for a dog's tooth to furnish suggestive ideas. Instead of this, the builders of our cathedrals were eminently practical, and made their edifices exponents of their faith, understood of all men; the anomaly being that the enrichment of cornice and capital, especially the earlier kinds not derived from nature, have no intelligible meaning; but considered as the representative of treasured riches, with which all then must be acquainted, they would be understood of all, and enhance the dignity of the design by association with their known costly type. It is not to be wondered at

* The mixture of alloys in certain proportions produces a blue metal. The composition of this was evidently known at that period.

* Labarte.

that in the present day, when all their golden examples are lost in the very recent revival of Gothic architecture, men should regard as of stone origin all the forms they found in that material; and that when fragmentary pieces of gold or silver are discovered they are set down as copies of stone, although they possessed all the elements of beaten work, were true to the nature of the material, and agreed with the practice of goldsmiths of all ages.

The deductions drawn by the lecturer were, that gold and stone might be and were made the vehicles for the representation of objects foreign to themselves, while both had a treatment natural to themselves:—The gold in sheet—beaten, raised in lobes, fluted to give strength and shadow; in wire—in coiled, in spiral, and numberless curved forms. Stone had its natural expression in masses, in chamfers, &c. When we saw arches represented in gold, we knew they were derived from stone. In like manner, when we saw represented in stone the coiled and spiral forms of wirework, or beaten, lobed, and fluted forms of sheet gold, the identical forms of the art-work of the goldsmiths of the same period, the same exercise of reason should lead us to infer that they were representations of gold work then existing. Why not give to the elucidation of architectural form the same exactness of reasoning applied to other pursuits? If in geology we find forms not agreeing with the nature of stone, we search for correspondence in other objects for their counterparts, and at once pronounce their origin. Why not so with the unexplained forms of architectural decoration, and obtain a like practical result?

THE ORNAMENTAL ART OF JAPAN.

IN our former article upon Japanese ornament, we said that it, as a style, in part consisted of purely ideal shapes, and in part of forms derived from nature. As in that article we spoke of the forms which had a mental origin we shall now consider those derived from living objects.

Both flowers, birds, insects, and certain fabulous creatures, are much used in Japanese decorations; but in all cases the natural object is subjected to a conventional treatment. The flowers are "displayed" rather than rendered symmetrical; that is, they are spread out flatly upon a surface. The salient features of the plant are always well caught and expressed. Deformities of growth are to a great extent discarded in the rendering of details, yet that rustic character which chiefly results from blights, and injuries sustained, is cherished and represented. The skill with which flowers are spread over surfaces is great, and they are generally beautifully drawn. Botanical truth is often observed in the small parts of the flower, and general accuracy is scarcely ever sacrificed.

Certain flowers are favourites with the Japanese, as the rose, lily-of-the-valley, and forget-me-not are with us. Those most used in their ornament are the Chinese pæony (fig. 3) and the chrysanthemum; but many other flowers are in common use with them. The sacred bean, china-aster, bamboo, blackthorn, almond, narcissus, castor-oil plant, hibiscus, pomegranate, convolvulus, umbelliferons plants, reeds, grasses, and trees, are all of frequent occurrence, and certain other plants are not uncommonly used.

While we say that flowers when used as ornament by the Japanese are usually "displayed" or rendered flatly, and yet without symmetrical order, it must not be understood that this is always the case. Flowers are sometimes treated symmetrically. We give one example in fig. 6, where we have exactly reproduced the Chinese pæony, as used for a wall-paper pattern.

Birds and insects are also much used, we say, in Japanese ornament, as well as conventional creatures. Of the latter class the dragon is the most common, and appears in the greatest diversity of shape. The bat is also represented in some instances in a purely ideal manner; but the ideal bat is perhaps chiefly constructed by the Chinese: treated conventionally, it is common in Japanese ornament. The stork, certain small birds, many insects, as butterflies and grasshoppers, and even separate feathers, are frequent in decorative compositions. The stork is given in every conceivable attitude, and a flight of these birds is commonly represented on a surface with the view of ornamenting it. But the birds are not treated naturally, but ornamentally. Conventional forms are produced sufficiently like the creature intended to suggest it to the mind. This is the true way to use natural objects for the purpose of ornament. We do not produce ornament if we merely imitate nature; we do so only when we adapt the object chosen as a theme, to the position for which it is intended.

We have spoken of ideal creatures, and of an ideal bat, yet space will not allow us to consider the ornamental animals found in Japanese decorations; they are yet so curious that we are tempted to give one illustration (fig. 7).

The breadth with which dense heads of flowers are treated by the Japanese is great, and the skill with which they achieve the general aspect of the plant imitated is wonderful. They delineate a mass having the contour of the entire head of flowers, and enrich this in various ways; frequently without giving the slightest attention to the forms of the individual flowers. Trees are very variously treated, and are always severely rendered. The foliaceous branches are sometimes almost wholly ideal in kind, yet they are natural in appearance; and trees are never rendered symmetrically, but in the rustic or broken manner in which they are usually seen. All flower drawings of the Japanese are worthy of the ornamentist's attention, as they invariably partake of an ornamental character. We give one or two illustrations (figs. 1 and 2), well deserving careful study. They are from one of their botanical works, and are the more interesting as they were drawn for the purposes of science, and are yet ornamentally treated.

We must now pass from a consideration of the elements of Japanese ornament to notice composition as it occurs in the style with which we are dealing.

Broadly, it may be said that Japanese ornaments are collected together without order. Method is not wholly wanting in the grouping, for the Japanese achieve the effect they desire most completely, and this can only be done by systematic working; but regularity in the disposition of their ornaments rarely occurs. If the front of a square cabinet is to be decorated they usually divide it diagonally. A fret is frequently seen to border two-thirds of an object in the most regular manner, and then suddenly give place to some irregular ornament. Extreme irregularity characterises the grouping, and much ingenuity is frequently manifested in securing the desired effect.

While grouping is thus exceedingly irregular in most Japanese art-objects, it is yet founded on principles of order in some cases; and even a severe geometrical basis is occasionally employed for composition. Diapers of a very regular character are common (fig. 8), and larger geometrical

FIG. 8.

repeating patterns also occur. Some of these set patterns are excellent, and few are feeble in character. There is no great peculiarity in the construction of these patterns; indeed, many might be mistaken for productions of the best period of Mediæval art, but in using these great eccentricity is often manifested. Remi Schmit & Co. had a box in the late International Exhibition enriched with small regularly-repeating ornaments. Being a Japanese work, it was not covered with one pattern, but was divided into segments to which were applied diapers of very different kinds. It is common for Japanese articles to be thus decorated: an angular corner portion of a cabinet-front, or the quarter of a box-lid, is frequently regularly diapered over, while the remaining portion of the surface is treated in a very different manner. Even a small and irregularly-shaped portion of a surface is sometimes diapered, while the remainder is plain.

Viewing our subject strictly, we are confounding two ideas. We are blending the idea of grouping with the mode of applying ornament. Speaking more accurately, the groups of ornamental forms found in Japanese ornament, are frequently of a methodical or symmetrical character; but these groups are *applied* with great irregularity.

Landscapes (these are sometimes used in Japanese decorations), and plants, when used as ornaments, are curiously applied. A box, called a pillow, shown in the Japanese court of the late Exhibition, by Sir R. Alcock, had a landscape wrought upon it in gold lacquer. This landscape was a panoramic view, surrounding the entire box. It was continued uninterruptedly on the four sides. The most curious feature, however, was this,—mountains, trees, and the sea, passed over the angle at the upper part of the box, and extended across the top: thus five sides of the object were covered by the one landscape. A Japanese dressing-case, now before us as we write, has hawthorn branches wrought upon its sides. These in every case round an angle, and extend over part of a second side; while that on the top bends down to one of the vertical faces. A box (also now before us), intended to be carried by a Damio's wife, has a plant wrought upon it, growing from a rock; but the branches and foliage extend round the angles. A saucer-shaped bowl, having a deep rim as a foot (similar to the rim forming the foot of many ordinary tea-cups, only perfectly plain), has a flower drawn upon its exterior surface. This spray commences at one side of the bowl, and passes, apparently, through the rim, or between it and the rounded portion of the bowl, to the other side. A plant originating on a panel of a door frequently disappears behind a style, and re-appears in the next panel, as though the style was something applied to the face of the door after the decorations were added. Angles, protruding members, or recesses, are no obstacles to Japanese artists; the ornament follows the surface in its undulations, or appears and disappears where the decorator pleases. These are great peculiarities of the Japanese mode of applying ornament to surfaces.

Most men who have great skill in any one art have some peculiarity. Indeed, with the extreme development of mental power in one direction, a weakening of some other faculty often seems to set it; but the weakness is insignificant and trifling when contrasted with the favourable development of the mind. It is so, also, with nations. Few countries rise to any great height in civilization without manifesting some peculiarities,—some features belonging only to their own national character, and features which contrast strangely with general greatness. In the case of art, it is similar. With a noble and earnest development of true qualities there is frequently some manifestation of weakness—some shortcoming to militate against perfection. This we see in the mode of applying ornament by the Japanese.

Some Japanese ornaments are almost perfect in form, and in the grouping of their parts. The treatment of flowers, as we shall shortly see, is in most cases very commendable, and the colouring and execution of art work is frequently inimitable. In most respects Japanese ornament is to be commended, but the mode of applying the decorative forms tends to deaden our admiration through its weakness.

While the Japanese mode of applying ornament to the surfaces which it decorates is unsatisfactory, the treatment of the ornament is highly to be commended. Flat ornament, or ornament in low relief (see fig. 3), not apparently, but really so, is always applied to a flat surface. There is no sham work with the Japanese. They are honest in art. They do what they mean, and mean what they do. This candour of expression is ever pleasing. Openness of character is very lovable. If a surface is flat, and this is its most desirable condition, surely the ornament applied to it should not disturb this welcome feature. The flatness of the dressing-case of which we have already spoken is perfectly preserved, while it is enriched with sprays of the blackthorn. In this mode of treating plants there is no sacrifice of beauty. For instance, every flower in the blackthorn spray is beautifully drawn; even the most minute parts are represented with a fidelity which, perhaps, no European could imitate. The drawing is also delicate and full of feeling; yet the branch is not symmetrical in its parts. The artist who produced it was not the school man of our civilization. He could draw a spray flatly without feeling that it must hence consist of corresponding halves. He could subdue his spray to conform with the requirements of the surface which it was to decorate, without giving up the freedom of growth which he fancied he perceived in the natural model. He was, in fact, a man free from all prejudices, who could live as a *semi*-naturalist without feeling that his works must either be imitative on the one side, or geometrical on the other. The flowers of the blackthorn spray are made out in gold, on a black ground. Four kinds of bronze are, however, employed in its produc-

Fig. 6.

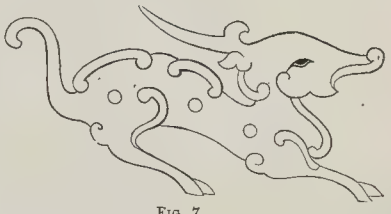

Fig. 7.

ORNAMENTAL ART OF JAPAN.

tion,—one of a rather warm tint; a second very similar, but slightly brighter; a third we could readily imagine, from its grey hue, to be formed of a mixture of black lead and gold; and a fourth to consist of gold and a small quantity of iron-rust. The flowers formed of the gold first mentioned are solid, and have the stamens wrought upon them in the second (or brighter) gold named. Other flowers are wrought in the two duller bronzes, but these are outlined with the first gold. The stem of the plant is enriched with small square fragments of pale and bright gold, apparently minute cubes of solid metal, or squares of sheet-gold, much thicker than gold-leaf. These glitter, and give brilliancy. The use of bronzes of different colours is common with the Japanese, and by their use they get all the variety demanded by the eye, and yet retain consistency of treatment.

The treatment adopted leaves the box in appearance what it really is. It does not convert it, in aspect, into a pedestal, or black mass on which blackthorn branches really rest. The sprays have been added with the intention of making the box more beautiful, and not with the idea of making it look like something else. Beautiful as flowers are, the Japanese artist never wished to make the box appear as if covered with real flowers. To do so would be to deceive, and the true artist is honest in his expressions. The sole object was that of making the box more beautiful by applying to it graceful forms. It is a box still; and a beautiful box. Fig. 4 is a flatly-treated spray, taken from a box.

This principle of preserving the true condition of the surface decorated is maintained rigidly in all Japanese works. Through the kindness of Mr. M'Donald we possess a number of specimens of wall-papers from Japan which were shown by him at the late Exhibition. In no one instance is imitative relief attempted. Rigid flatness of treatment is found in every one. Flowers, birds, clouds, and conventional ornaments are all rendered with the same flatness (see figs. 5 and 6, all of which are from wall-papers). Thus the true condition of the wall is preserved when covered with the paper. However humiliating it may be, we have yet much to learn; and that, even, from the Japanese.

The Japanese wall-papers lead us to notice another art-feature worthy of attention, which we may now desirably consider. A great number of the lacquered objects of Japanese manufacture are brightly coloured. Vermilion is common on these articles. Rich maroons, greens, and gold colours are regularly used; but the objects to which these colours are applied are small when compared with the wall of the room. They show us, however, that the Japanese are familiar with bright pigments. If we turn from these lacquered objects to the wall-papers we are struck with the marked difference of colour which they present. The wall-papers are as dull and neutral as the lacquered objects are bright and positive. This might at first seem strange; but it is not so. It arises out of a true art-feeling. The wall of an ordinary apartment should always be treated as a background. It should hence be neutral in character; it should recede from notice rather than obtrude itself upon the attention. If it is thus negative, it will cause the furniture, and even the occupants, of the room to look attractive and beautiful. If it is positive, it will draw to itself that attention which ought to be left free to fix itself upon more noble objects. A wall has its existence merely as a necessity, and is not created as an object of beauty. The Japanese know what a wall is. They keep it in its place. They decorate it becomingly; they enrich it by a pattern; but do not give to it strong colours to make it attractive. They leave it a wall,—a background,—a surface which, while agreeable in its place, assists the beauty of all objects standing in front of it, and resting upon it.

In producing a wall-paper, we generally use several "blocks,"—a block for each colour, and hence print several times. The Japanese use but one block, and hence have but one colour. In some cases they print twice, or even three times; but this is rare. Once is their general number for wall-papers, and with this they are satisfied.

What we have now seen of Japanese ornament leads us to see errors into which our French neighbours have fallen in producing designs in this style. From a cursory observation of inferior articles, they have gathered an erroneous or imperfect knowledge of the style, and have combined it with their own art. Japanese wall-papers never suggested the so-called Japanese papers of the French. Common earthenware may have done so—especially that from China—but no good work could have given rise to the ornament which France has recently produced as Chinese and Japanese. The flatness is gone which we everywhere find in Japanese work, and the skilful rendering of flowers. A few Japanese buildings in the background—a pagoda or a temple; a figure in the foreground and a Chinese lantern, are the art emblems chosen. These are to indicate the style of ornament used.

a

While we must condemn these recent productions of the French, we admire many of their late wall-papers beyond most of the similar productions of our own: some shown in the late Exhibition were all that could be desired. We would also pay a tribute of respect to Mons. Barbedien, of Paris, and to his able designer of enamel-ware articles, owing to the happy manner in which they have caught the spirit of the artists of China and Japan, and given forth new works of great beauty in the style of the art studied. Much credit is due to them for their labour and results: their works speak well of their art-knowledge. The enamel-ware of Mons. Barbedien may advantageously be studied, with the view of ascertaining how foreign ornament may be applied to our own purposes.

THE ARCHITECTURE OF SPAIN.*

WHEN the stranger (the visitor to Granada) enters those delicious groves redolent of the perfume of roses, and reverberating with the song of the nightingale, which beguiles the tedium of the ascent to the Alhambra,—when he has reached the platform upon which the Alhambra stands,—a scene totally unexpected, and wholly unlike anything that he could have anticipated, presents itself to him; not a vestige of the palace of the Moors,—he feels as if it had vanished like its Aladdin prototype of the Arabian tales,—whilst in its place, before his eyes, stands a "sumptuous pile of Paladian architecture" that might have been transported from the valley of the Adige or the banks of the Brenta. This is the palace of Charles V., which, in my opinion, and for reasons which I will explain, has not attained that estimation of foreigners which it is entitled to. The Spaniards, indeed, have themselves ever been proud of it, considering it one of the finest architectural monuments of their country.

For its erection a large portion of the Alhambra—the winter palace of the Moor (which the Spaniards confess was the most sumptuous portion),—was unfortunately pulled down by Charles V., who here committed the very crime which he reproved in the case of the Mesquita of Cordova. Strangers, as I have said, come here for the purpose of viewing the Alhambra, most of them embued with a feeling favourable to Moorish art, and freshly excited by having just passed through the exquisitely beautiful Moorish Gate of Justice (which stands near the last grade of the ascent), and all with the expectation that the Moorish palace would present itself. The work of Charles V. is thus viewed with disappointment and chagrin, or with a feeling akin to indignation for its impertinent intrusion. For this reason, I cannot help thinking that it has been overlooked and misprized by all visitors. To those whose tastes are not wholly catholic (and this is too frequently the case even with professional men), and who, from enthusiastic admiration of one style (which may be justly founded), lose, to a certain degree, the full perception of the beauties of another style which is opposite,—to the taste of those who come here fervently embued with a feeling for the Moorish architecture,—this edifice of Charles V. in such a place does, indeed, offer a rude shock; for no two architectural monuments more directly opposed in style and taste could have been placed in juxtaposition. The largeness and breadth of style, both of its leading forms and of the ornamentation of the Palace of Charles V., is in violent contrast to the exquisite elaboration and elegant littleness of the Alhambra. The prevailing feeling in the one is dignity and repose, that of the other playfulness and grace. Both have been erected to the same intent—the palace of a sovereign,—and both with the same appliance, indeed, necessity, for a hot climate, an interior patio; but how different are the results they present. The palace of Charles V. is erected (as the Spaniards say) in the order of the Greco-Romano. It is in fact the style of the Renaissance, which was introduced into Spain by Berrugete and Machuca. It was the first essay, and perhaps remains the best in the new style. Machuca was the architect; the choice of the situation, although unfortunately necessitating the destruction of a part of the Alhambra, was in accordance with the usual genius of the Spaniards in the choice of the sites of their palaces, to which I shall have occasion hereafter to refer, and was faultless.

It is commonly supposed that the continual and frightful earthquakes that were at that period experienced in Granada, deterred Charles V. from completing it. It was finally relinquished at a second attempt, after an interval, and therefore never inhabited. It is, however, perfected, with the exception of the roofing, and therefore displays nearly its full architectural effect. Its plan forms a perfect square of 20,000 superficial feet, 200 feet each side. It consists of three façades, of which the west and the south are the more striking and important. Is is composed of two stories, which are divided by a magnificent cornice, sustained in the façade to the north, by half-columns of the Tuscan order (almohadilladas): between the half-columns are windows, and above them oval openings. This base story is rustic, with the stone divisions marked. In the second story the half-columns are of the Ionic order, 25 feet high, and the walls are decorated by many excellent sculptures, by Morell and Juan de Vera. The principal gate or portal façade, which is to the west fronting the Placeta de los algibes, is 62 feet high, and 60 feet wide, consists of three doors grouped together. The cornice of the first story in this west façade is sustained by eight Doric columns, and the second by the same number of the Ionic order: the intervals are decorated by relievos, medallions, and statues, over the pediments of the doors, which are beautifully executed. In the façade the portal is also 60 feet high, and of the same width; the first or ground story is of the Ionic order, the second of the Corinthian. The sculptural decorations to this façade, also by Juan de Vera and Morell, are even finer than those of the west; but the most extraordinary architectural feature of this palace of Charles V. is its inner court or patio, which is circular. I am not aware that there exists any precedent for this form of interior court in any of the Italian palaces of the Renaissance, to which class this building belongs, nor do I know that there is one example of it in the buildings of the Moors, from whom the idea and purpose of the patio were originally borrowed by the Spaniards. I believe it to beunique, and the effect is certainly dignified and striking. The extensive circular patio is 144 feet diameter, round which runs a colonnade of two stories, each sustained by thirty-two columns, the lower ones of the Doric order, the upper of the Ionic, which is based on a breastwork above the inferior cornice sustaining the superior ring. The grandeur of the circular colonnades, with their changing effects as the sun passes its daily course, are certainly most novel and unique, though it would undoubtedly, if inhabited, have been covered with an awning roof.

There is below, not far from this palace, in the groves of the cuesta of the Alhambra, an extensive mural fountain, also erected by Charles V., in the style of the Renaissance. This palace is interesting as a type, perhaps the finest one, of the architectural taste in Spain at that period. Architecture, as if to vindicate her sisterhood with poetry, painting, and sculpture, underwent, in a remarkable manner, precisely the same transformations, and presented precisely the same phases, as her sister arts. With the advent of Charles V. ceased that which I may call the Gothic taste of Spain in *all her arts*. After Ferdinand and Isabella she produced (in poetry) no more her famous old romanceros and canciones (her ancient ballads). Her painters of the Albert Durer type finished in the crowning genius of Fernando Gallegos; and her architectural erections of a kindred taste in the beautiful works built under Ferdinand and Isabella, perhaps most brilliant in the expiring efforts as the church of St. Juan de los Reyes at Toledo, marked by the simplicity of its general forms, and unsurpassed richness of ornamentation. That singular phenomenon took place in all her arts in Spain, unprecedented in any other nation,—the establishment of the classical era, and its taking precedence, in time, of the strictly national. (I have alluded to this in other lectures.) The polished elegance, the measured correctness, and finish of the classical writers were emulated by Garcilasso Boscan and Hurtardo de Mendoza. The fulness, richness, and grandiose taste and forms of Michelangelo, founded on the classical antique, were reproduced by Alonzo Berrugete and Gaspar Bercerra, and the architecture of the classical Renaissance by these and Machuca. It was not until the succeeding age (all this having passed away), that the strictly national style developed itself equally in all the arts. In literature, in Cervantes, Quevedo, Lope de Vega, and Calderon; in painting, in Velasquez, Murillo, Alonzo Cano, and Zurbaran; and in architecture, in the matchless works of Herrera. As in literature, so in architecture, there appears to have been no transition period between the Gothic taste and the Classical Renaissance. The latter, like an Oriental sun, burst upon the Spanish world without a dawn; and the erection of the palace of Charles V. shows how cordially and energetically Spain had adopted the style of the Renaissance, more so than most other European nations, although in France the Palace of Fontainebleau and the earliest portion of the Louvre were contemporaneous erections, evincing also the adoption of the style by France. In this country it did not distinctly take root; it was coeval with the palace and chapel of Hampton Court, erected by Wolsey in the Florid Gothic style, of which, unfortunately, the beautiful hall alone remains,—the rest having been demolished by William III. for the erection of his Dutch palace,—and also some erections by the same at Windsor. From political causes, no doubt, of which the Reformation was a prominent one, the Renaissance style did not present that marked advent in this country that it did with Continental nations. The Gothic was longer expiring, and in its decay underwent the debased forms of the Tudor style, and its termination was somewhat involved in obscurity; but we only find that it had ceased to exist, and had been supplanted entirely by a new style in the succeeding age by the raising of the Paladian palace of Whitehall by Inigo Jones. The reign of Charles V., with its novel style, was not a great building age, in Spain at least, in comparison with that of his successor, Philip II. There were some town halls, ayuntamientos, as well as bishops' palaces, erected; but the architects have unfortunately left us the most extensive evidence of their activity and zeal in the coros of cathedrals, as also the retablos of the same. Being usually painters, sculptors, and architects, they furnished the architectural design, they carved the sculpture which ornamented them, and executed the paintings, which completed the decorations. These works are admirable in themselves; nevertheless, being in the taste of the Renaissance, they are out of keeping (especially in respect to the coros or choirs) with the Gothic edifices in which they are introduced. There are few of the Spanish cathedrals which are not injured by this introduction in so prominent a feature as the coro.

In the succeeding reign, that of Philip II., the architecture of Spain, as I have said, in common with its literature, changed its form and taste, and in both (presenting what may justly be termed the national style) attained the highest degree of excellence. It is an unusual phenomenon for an art to pass from a comparatively florid style, which that of the Renaissance must be considered, to one of greater, indeed of unexampled, severity; but such was the case with architecture in Spain. The most important work which was the result of this change of style, though perhaps it may not be the most complete example of it, was the Escorial. The Escorial, in magnitude, is one of greatest—I question if it be not the greatest—work of the modern world. In mere bulk of material it far exceeds St. Peter's at Rome, whilst in the area which it occupies, if we include the paved court, which is by no means large in relation to the building, and which occupies the north and west façades only, and which is enclosed by a wall and pillars of granite, which correspond with the pilasters, the string courses, the doors and walls of the building,—including this, I say, this great work occupies an area of 500,000 superficial feet. Nothing is more extraordinary in respect to this vast edifice than the time of its erection. When one considers that of the great architectural monuments of the modern world, St. Peter's at Rome took two centuries in completing, that the Cathedral of Milan occupied as many more; that the Louvre, commenced in the fifteenth century by Francis I. has only been completed in the nineteenth by Louis Napoleon; that so many of the greatest architectural works, as the Duomo at Florence, the Cathedral at Cologne, the palace of Whitehall, have never been completed at all; and that even that boast of celerity, St. Paul's, occupied above forty years, one is struck by the marvellous energy which, from the laying of the first stone, completed this structure most vast of all in little more than twenty years. Our own St. Paul's Cathedral might easily stand in one of its patios. So far as to its importance with regard to bulk only. Like St. Peter's, at Rome, it was the work of more than one architect (though not so numerous), and like St. Peter's, it has undoubtedly suffered in respect to perfect unity of design through that circumstance.

It was planned by a monarch that was not only the most munificent patron of art in general, but an especial one of architecture, of which he was a most excellent judge. The architect who furnished the first and original design was Juan Bautista de Toledo, and his design, as far as regards the exterior façades, was mostly carried out.

* A lecture delivered by Mr. F. Y. Hurlstone at the Architectural Exhibition, Conduit-street. See p. 345, *ante*.

He was dismissed after a time, for a cause unknown, and his place supplied by the greatest architect that Spain, or perhaps any other country, has produced in modern times,—Herrera. His work has principally been the interior, and consequently it is there, and not to the exterior, that we must look for that surpassing excellence which makes this building one of the greatest wonders of modern architectural art. The material is altogether of granite, the order almost wholly Doric. The roofs are of tiles, or sheets of lead, and its towers, cimborios, and façades of extraordinary grandeur and beauty. It is said, with a probability of truth, that this building was erected in consequence of a vow of Philip II., at the battle of St. Quentin, to San Lorenzo. But that the idea of a gridiron, which was the instrument of martyrdom of the saint, dictated the plan, or regulated the distribution of its parts (upon which Ford indulged his sarcasm), I believe to be a vulgar rumour. The influence, though slight, of the Moorish taste may be traced in its general external features, in the application of its patios, and perhaps in the general architectural simplicity or baldness of the exterior. I believe that its design would not have been other than it is were the gridiron no instrument of martyrdom.

The principal façade is 744 feet, exactly 20 feet less than the base line of the great pyramid (764 feet), and 37 feet greater than the second pyramid, that of Cepheron (707 feet), with towers at the angles of the height of 200 feet, which towers terminate in pyramids covered with slate, and finish in vast copper balls and a cross of iron. In the centre of the façade, and of a width of 140 feet, is a salient projection of the wall, rising higher than the rest to a height of 145 feet. This gives mark to the principal entrance, which is in its centre. Above a socle or pedestal, a yard in height, rises the first story, which is of the Doric order, and to the level of the cornice 62 feet high, which cornice runs round the whole of the edifice. The said socle serves as a pedestal to eight half-columns, four on each side of the gate, divided two and two, in the intercolumniations of which are four niches, and above each two windows, one above the other. In the middle is the entrance, which is 12 feet wide and double that in height, with jambs, dentils, &c., all of one entire piece of granite. Above the door there is a window, and the architrave, frieze, and cornice of the first story are sustained by half-columns. The second story, which is Ionic, resting upon the cornice of the first, has no more than four half-columns, in whose interval, placed in a niche, is a statue of San Lorenzo, 15 feet high, executed in coloured marble, with the exception of the hands and feet, which are white, by Juan Bautista Monegro, below is a shield of the royal arms cut in stone. Above the Ionic half-columns is a triangular façade, with pedestals and balls, which terminate the principal portico.

In the half of the distance, at each one of the sides, are two gates of equal size, 10 feet wide, and double that in height, with jamb dentils and sobre dentils of one piece. All the doors and windows of this edifice have equally jambs and dentils of one piece.

Turning to the edifice, the façade of the south is the most beautiful of all from its majestic simplicity, having no more enrichment than the fillet and cornice, which at the same level run round all the edifice and four orders of windows. The number of these is 296, with three small doors below, one in each tower and one in the centre.

Entering the central door of the principal façade, you find yourself in a beautiful porch of 30 feet in width and 84 feet in length, above which are the celebrated libraries. The ceiling is of stone, well worked and adorned, though with simplicity, with fillets and lunettes, and the same the walls, which have pilasters in bold reliefs; and between them six grand arches, three on each side; to the west the middle arch is the entrance-door, with its lateral ones. The three which correspond in front, are open and give entrance to the grand patio of the kings, which is 230 feet long by 136 feet wide. The walls of this are adorned with pilasters in bold relief, which rise from a pedestal, and at 34½ feet terminate in a bold cornice, which is sustained by square modillons. These pilasters divide five orders of windows, the number of which, counting those in slate roofs and towers, is 267.

Upon entering this patio, as I have said, the façade of the church is opposite to you: 40 feet before coming to the temple, and altogether 5 feet high, are seven spacious steps, which run the whole width of the patio: above is a spacious landing-place. The frontispiece of the temple is composed below of five arches 14 feet wide and 26 feet high, the two outer ones level with the façade; the three middle ones, a little more salient or projecting, are between six Doric half-merged columns; those of the middle single, and those of the sides paired with capitals, architrave, frieze, and cornice corresponding. Above the five arches correspond five windows, 6 feet by 12½ feet high; and this first story terminates in the cornice of the patio. Perpendicularly to the said half-columns are six pedestals, with their bases and cornices 13 feet, and bearing six statues, 18 feet high, of granite, with hands and feet of white marble, representing six monarchs of the tribe of Judah and family of David, who in divers times contributed to the splendour and the restoration of the Temple of Jerusalem. These statues have girdles and crowns of bronze, plated with gold, as are also all the insignia which they bear. At the shoulders of these statues rises the second story, the façade formed of six pilasters, corresponding with the six half-columns of the first. Between these pilasters are three grand windows, and above the band which connects them there is another arched window, 13 feet wide and more than 26 feet high, which breaks the lower cornice of the façade, and is comprised in its curve within the pediment. A triangular frontispiece, with five balls upon pedestals, finishes the sky line of the façade. At each side of this façade rise two beautiful square towers to the height of 270 feet, which below are concealed in the building on either side of the convent and the college, and do not discover themselves but at the height of 82 feet.

Entering by the façade of the temple through either one of three gates, you are in the vestibule, or bajo coro, of the church, 60 feet square, extraordinary for its construction; its ceiling being formed of massive blocks of granite, which, from its slight curvature, appear suspended. The mode in which it is constructed, and its enormous lateral thrust counteracted, being wholly concealed.

The view of the church from this vestibule is one of the grandest that can be found or conceived. Even the cynic Ford, upon viewing it, was disarmed and fell down and worshipped. He says, "Here is indeed the triumph of architecture; it takes away the breath of the beholder by its majestic simplicity; all is quiet, solemn, and unadorned. The religious sentiment pervades the whole of the house of God; everything mean or trivial is forgotten, and awe creeps over mortal man, who feels that the holy of holies overshadows him."

A principal feature of this church is the situation of the coro, or choir, which I consider one of the finest inventions in this extraordinary building. Utterly unlike the usual Spanish custom of placing it in the principal nave, which it generally encumbers. It is at the entrance of the church, in continuation of the greater nave, though at an elevation of 30 feet. Measuring from the bronze railings which are immediately over the entrance to the church to the opposite wall, from which it is lighted by three large windows looking into the patio, it is 96 feet in length by 106 feet in width and 84 feet in height. Of itself a church of some magnitude, it is entered by two grand arches on either side, communicating with the ante-coros, which are cloisters at the same elevation as the coro, running round the church and passing behind the grand altar, which (the grand altar) being of considerable elevation, the performance of the services at the high altar is perfectly seen from the coro, as necessary for the responses, while the coro itself is utterly unseen by the congregation in the church, which gives rise to a most extraordinary effect: the solemn sounds of the responses and the anthems of the coro mysteriously float in the air, and fill the church with their harmony, without its being perceived from whence they proceed.

The ante-coros, or upper cloisters, which are upon a level with the coro (a second story, as it were), running round the church and passing behind the grand altar and open to the church, present, on passing along them, in the multiplied intersections of arches, some of the most magnificent scenes of architectural effect. Those who have passed through the upper corridors of the Colosseum at Rome may form an idea, though a faint one, of its grandeur. The body of the church is a perfect square of 183 feet, the material wholly granite. In the centre are four massive piers 30 feet in thickness, relatively placed at the distance of 53 feet; and eight others corresponding spring from the walls, distant 30 feet from the first, with which they are connected one with the other by twenty-four arches. Thus the nave and transept form a Greek cross of equal arms, 53 feet wide, with side aisles 30 feet wide. In the central piers are formed chapels which are decorated with columns; but it is impossible to convey an idea, even in representation, of the unsurpassed grandeur and solemnity of this interior. I know nothing to equal it. The lower cloisters, too, are unique with their archways and entrances. Severity of style is supreme. They have not a vestige of ornament, but in their cyclopean simplicity they charm the eye and possess the imagination by grandeur of line alone, in which they are unequalled by any Italian or other examples. There is a palace in Italy, the Pitti, at Florence, which invariably arises to the mind in association with this as an example of the Cyclopean style of architecture; but there is an *affectation* in the Pitti of rudeness and simplicity which makes it inferior to the work of Herrera in the realization of a true Cyclopean style.

Upon the whole, I should say that the Escorial has not had that attention directed to it which it deserves, and, consequently, is not held in that estimation which it merits. It has been criticized as a royal palace, which it was not. The feeling which gave rise to it was that which impelled Charles V. to retire to the monastery of St. Juste, that which, under a different phase of civilization had urged Diocletian to seek the obscurity of Dalmatia and to raise his vast pile at Spalatro. Philip II. was anxious to embrace the monastic life, though unwilling to relinquish the sweets of power. He became a monk while he was a sovereign, and he raised this pile Del Real Monasterio de San Lorenzo,—the Royal Monastery of San Lorenzo. If ever architecture in its loftiest aim displays its just equality with its sister arts of poetry, painting, and music, in the expression of a sentiment and in the embodiment of a feeling, it does so in the Escorial. The gloomy austerity, the intense earnestness, I may add, even the mystic grandeur of the religious feeling of Philip, which characterized his age, more especially his country, and was embodied in his person as its chief representative, finds its expression in these vast walls. A romance in stone and mortar amidst its savage and melancholy sierra, the Escorial remains, and will remain, unequalled as a monument and memorial of a phase of human civilization which has passed away.

The style of Herrera one would imagine less appropriate in its application to cathedrals and churches than to civil edifices; yet is the cathedral of Valladolid, erected by him in 1585 as the church of the Escorial, one of the monuments most worthy of the study of the architect: nowhere is the genius of this man more striking, imperfect as the building is, for it was never wholly finished; had it been so, it would have been, as Herrera himself said, with conscious and well-founded pride, "*un todo sin egual*,"—a whole without its equal. No artist, it appears to me, has been known to impart to the Greco-Romano architecture that solemnity and religious feeling which is considered so marked a characteristic of the fine Gothic cathedral, and in which the Italian temples since the Renaissance, as St. Peter's itself, and notably St. Paul's, are so wanting. Wherever this great man put his finger, he left the impress of sublimity. Perhaps the most perfect of all his works, the one which wholly bids defiance to criticism, is the Lonja, or exchange of Seville, 1583. Vitruvius has erected nothing finer. The general plan is a quadrangle, enclosing a court, surrounded by an arcade. There are two stories, ornamented externally by pilasters. The order is Tuscan, both above and below, and the court staircase, and various apartments, decorated with a profusion of the rarest marbles. The whole is a specimen almost unique of chaste elegance and massive solidity. An accomplished critic says that it is a model for public buildings, which should be placed in all boards of work or similar places. It is truly surprising the number of important architects' works that Philip II. scattered throughout Spain. There is scarcely a city of importance that does not present an instance in a gate, or entrance, a triumphal arch, an ayuntamiento, or townhall, or one or more convents. The Spaniards were, indeed, a convent-building nation. It is incredible the number that were erected even in the time of Philip II. In most large towns at that time the number of convents and nunneries averaged from forty to fifty, while others were distributed all over the land. As may be imagined (exclusive of the Royal monastery of San Lorenzo), Spain still contains the most magnificent examples of this class of edifice, notwithstanding the political events of the country have conduced to their destruction more than any class of buildings. Time will not permit me to specify them, although many deserve the earnest study of the architect. In most Spanish towns of importance since their suppression, the most convenient one has been

converted into a sort of national gallery, in which are collected the pictures, not stolen by the French, and the painted sculpture, &c., of the rest; so that most of the important Spanish towns have now their national gallery. The largest one is usually converted to the cigar manufactory, a Government office, in Spain, of the utmost importance. I have pointed out the extraordinary manner in which the architecture of Spain kept pace with its literature in its rise, progress, and its culminating excellence, and the singular analogy between the two arts in their various phases. It was equally so in its decline. When literature had attained its highest excellence in its national and characteristic style in Cervantes, Quevedo, Lope de Vega, and Calderon, there arose a poet who destroyed the goodly edifice by the introduction of a vicious taste, named Gongora. He was not without cleverness; indeed, it requires a certain amount of talent, though debased, to override that which is great. The vile trash was characterized by his name, Gongorism, as well as Cultismo. It was the same as that we term cupheuism. Precisely the same took place in architecture. Upon the footsteps of the great Herrera trod a man named José Churiguerra (with his fol lowers of course), that at once debased the architecture of Spain, and stamped a style with his name, Churiguerresco Churiguerismo, like the Gongorism of literature. Its characteristic is the absence of all purity of taste, and the overwhelming redundancy of *vicious* ornamentation. It is also called in Spain the Plataresco, from its resemblance to the capricious and fantastic forms of the chasings of plate. As may be imagined nothing can be worse than the works of Ribero, Tomo Gavilin, the followers of Churiguerra, who was not the worst, though his name has been selected to designate the style. Their works are worse than the decline of the Italian, the Rococo, which in its apostle Borromini was nearly contemporary, and are called by the Spaniards themselves, who are excellent critics of art, Delirios, or offspring of diseased or distempered imaginations, and sometimes compared to the works of the harpies who in ancient times scattered filth over everything, as these have, indeed, befouled too many of the principal churches in Spain, as the Cathedral of Valentia, in which city may also be seen some of the most outrageous specimens of the style in the houses of the Valentian nobility—the angles at the bases of which will turn into and roll along the ground in enormous volutes or scrolls, ornamented with Tritons and Cupids, and endless broken and fantastic curves. However, to some of the best works of the style one cannot help according a certain degree of admiration for their richness and fertility of invention. One of the least unsatisfactory specimens is the College of San Telmo, once a naval college, at present the sumptuous palatial residence of the Duke and Duchess of Montpensier, at Seville, facing the Christina Gardens. I regret that I have not a drawing of the portal façade of this building, which is most interesting, but it is given, as well as the Alcasar of Seville, in Mr. Wells's "Travels in Spain." The building is composed of two large quadrangles, behind a façade of 500 or 600 feet in length, the portal centre of which, of most elaborate execution in the Plataresque taste, has been enriched by the architect, Matias de Figueroa, in its three stories, with carved columns, inscriptions, balconies, statues, single and grouped arches, medallions, wreaths, friezes, &c., of unexampled richness. Another specimen, also at Seville, deserving the attention of the architect, is the façade of the Ayuntamiento, or Town-hall, once a portion of the vast Franciscan convent, now for the most part pulled down.

This degraded style—the decadence of architecture in Spain—sprang up towards the end of the seventeenth century, when all her arts declined, and continued a considerable time into the next century.

It is not the object of my lecture to notice the modern architecture of Spain; I will, however, conclude with a few remarks upon Madrid in an architectural point of view. It is, by some centuries, the youngest capital in Europe, St. Petersburg excepted, as it cannot be said to have been founded before the sixteenth century by Charles V. It in consequence is deficient in ancient architectural monuments in Roman, Moorish, Gothic, or even Cinque-Cento art. It possesses no Notre Dame or Louvre and Tuileries like Paris. It has no Westminster Hall, Westminster Abbey, no Tower, no Whitehall, Banqueting House, like London, and is unfortunately rich in Rococo, which was the reigning style at the earlier period of its erection. It is, besides, the smallest capital of a great nation in Europe. Nevertheless, it has some architectural features superior at least to London. We have no street in London, nor yet, indeed, is there in Paris, notwithstanding the recent splendid improvements by the magnificent sovereign of the French, which can vie with the Calle de Alcala, in its noble expanse and its varied succession of buildings of sumptuous or stately architecture. I should mention that there was a sort of reaction in the architectural taste of Spain before the middle of the eighteenth century, the first native who opposed successfully the Churiguerresque style being Ventura de Rodrigues; he fortunately, with his followers, led back to a more severe and correct style of design, which became extremely popular and beneficial to the architectural display of Madrid. He was the founder, in fact, of the modern architectural taste of Spain existing to this day.

No metropolis in Europe presents a royal palace which, taking all things into consideration, can vie with that of Madrid. It was erected for Philip V. by Juvara, a Sicilian, and Jachetti, a Turinese, to whom, with Sabatine, also a Sicilian, Rodriguez, and Villanenva, Madrid owes her best architecture. Its style is Italian; it is square, each of its fronts being 470 feet in length by 100 feet high. It is built of white stone, with a rustic base of granite. It encloses a magnificent court, and is of itself a building of the utmost importance; but there is an inexpressible charm given to it by its extraordinary site, and that site the more extraordinary as being connected with a busy and populous city. This sumptuous pile towers over a country grand in its wildness, and closed by the magnificent range of the Guadarama mountains. It forcibly recals to mind some of those finest works of Claude Loraine, where noble and elegant fabrics of Italian architecture are surrounded by, and contrasted with, nature in her grandest features in the expanse of the boundless sea, or the vast and luxuriant wilderness closed by the rolling Apennines, forming a whole fraught with poetry.

The Puerta del Sol is the Charing-cross, or more than the Charing-cross, of Madrid. It is here (in the language of Johnson) that there is the confluence of the full tide of human life. The Spaniards were making it (when I was there, two years ago), by the buildings with which they were surrounding it, worthy of its importance as the heart of the capital. They had embellished its centre, not with the ginger-beer squirts of Trafalgar-square, but with a truly magnificent fountain.

The most considerable work of Villanueva is the Museo (the National Gallery) of Madrid, beautifully situate on the Prado. It is of red brick, ornamented with granite. The principal façade (although in some respects open to criticism, as being flanked by two projections in the manner of bastions tending to injure the harmony of the outline) is a work of considerable merit. In the centre is a hexastyle portico of Doric, flanked by two Ionic colonnades of incomparable beauty, and the Ionic temple which forms the lateral, *i.e.*, the principal, entrance is unrivalled in beauty and fitness. The vast circular hall of entrance, from which open the entrances to the various galleries or schools diverging from it, is one of the noblest and most appropriate of designs. It is impossible, in considering the National Gallery of a foreign nation, not to feel shame and humiliation for our own; the more so, as the work was not of an Academician only (Mr. Wilkins), but of the Royal Academy of Arts of London, the plans in their progress having been laid before the council of that body for their consideration—their approval or rejection. One conclusion may be drawn from it, that however it may be with the other arts, architecture has not her home in that institution. Nor from that source will be drawn the genius and inspiration which will hereafter dignify and adorn our future London, or place us upon a par with foreign nations in this one of the noblest of the fine arts. I allude to this especially in consequence of the speech of Sir Charles Eastlake at the dinner the other day at the Royal Academy. The Royal Academy have felt that architecture is of all the arts the one which has slipped through their fingers, and alone is independent of that absolute control that they assume to exercise over all the departments of the fine arts. Sir Charles has therefore taken the golden opportunity afforded by the dinner (which he has done upon other occasions for equally sinister objects), to suggest to Her Majesty's ministers the necessity of the establishment of a permanent power (of course, vested in the Royal Academy) to exercise absolute authority over the designs and execution of all architectural works hereafter to be erected in London, to secure to us, as he says, "that unity and consistency which are especially desirable in architecture,"—"that comprehensiveness and continuity of purpose which are essential to completeness of result." It is not a little singular that Mr. Ford, in an able article upon Spanish architecture in the *Quarterly Review* in 1846, ascribes the debasement of Spanish architecture, and the deterioration that Madrid has suffered in this respect, to the very appointment of such a commission as Sir Charles Eastlake urges upon the Government. I quote his words:—"Scarcely an edifice in Spain escaped these harpies—he alludes to the Churiguerresques, who were worthily succeeded by Royal Academicians. These, with their chairs, chains, and centralization, were the inventions of Philip V., who came, according to Caen Bermudez, to crush ignorance and false taste with a strong hand. He created an artistical inquisition, which watched over architectural heresies, and whose approval was requisite before any new edifice could be erected. Thus the intellect of the nation was fettered by conventionalities, and every opening closed against private judgment and individual mind."

A RECENT PEEP AT THE ROOKERY OF ST. GILES.

IN no part of the metropolis has more satisfactory progress been made than around this famous but most disreputable metropolitan district: many houses of a very bad description have been removed; and Church-lane, which leads from Church-street to New Oxford-street, is the only portion of the ancient Rookery now remaining. Twenty years ago it was a place of great danger except to those to whom the inhabitants felt well-disposed. Then the sanitary conditions were terrible, and the low lodging-houses were pandemonium. Into these dens, men, women, girls, and boys of all ages were admitted in unlimited numbers; and scenes were enacted which were disgraceful to humanity. From time to time since the above date, particularly during the last seven or eight years, a marked improvement has called for notice. It is not so much that the character of the persons who live here has amended, for still we see groups of the same sort of dangerous men and boys, the same haggard old women, others, of younger years, ragged and dirty; and children, the majority of whom are Irish, or of Irish extraction; but, in spite of themselves, they are obliged to preserve a degree of cleanliness, in the rear part of the premises. So far as we were able to judge, the sanitary inspector of the parish seems to do his duty well: there were few accumulations of dust. Indeed, the people seem to have now a practice of throwing the ashes and refuse into the carriage-road; these being swept up by the scavengers every morning and evening, and removed; and although this plan is not very sightly, it is perhaps less harmful than the storing for a time of such matters in cellars or narrow back-yards.

We heard some complaints here of scarcity of water, but not so loudly as in many other districts. There is a contrivance in several of the houses respecting the water supply: it is to place a number of casks in the cellars which are now unused. These casks are filled when the water comes in from the main, and it can be pumped up, when wanted, into a passage, or some other convenient part of each house. This, it is said, prevents waste of water; but great care should be taken to keep pure those places in which this supply is held, by means of seasonable lime-washing, ventilation, and the removal of all impure matters. There is a pump of this kind attached to the front of a shop at the south-east corner of Church-lane. This is supplied from a very large cistern in the old-fashioned house adjoining, which was formerly occupied by Justice Dyott. It is said that during the severe frosts, for several years past, this supply has never failed. The pump cannot be used by any one except with the permission of the proprietor of the shop. The licensed lodging-houses, which are under the care of Mr. Reasen and his staff, are in a clean and wholesome condition. In Church-street, there are several houses which are licensed as common lodging-houses, and are under the surveillance of the police. In one of these houses the late mysterious murder was committed; and in Justice Dyott's house a similar tragedy occurred some time ago. Some of these places afford lodgings to dissolute girls, and are notoriously evil houses. It has been much objected to that such arrangements should be allowed; but this is not, as the law exists, a question for the police: their continuance depends on the forbearance of the parish authori-

ties; and certainly it is better that such spots—blemishes though they be—should be open, either by night or by day, to the visits of the police, than remain dirty and disorderly. To return, however, to Church-lane; it is to be noticed that, although improvements have taken place outside, the houses within, let in tenements, are as badly conditioned as formerly; and we think as much, indeed more, overcrowded than ever. In this matter we can expect no good change until the law empowers the police to inspect dwellings so let, as they do common lodging-houses. This we have often urged.

The population of the Rookery is peculiar; and it is disheartening to notice, that although five schools of various kinds have been built round about, but few, if any, of the children, are sent from Church-lane. There, and elsewhere, in parts of the metropolitan population similarly composed, it is matter for wonder what is to become of these children, and if, when they arrive at manhood and womanhood, they will be better or worse than the wretched parents who have brought them into a miserable existence. There is constantly a police-officer at each end of Church-lane, and by this and other means a degree of order is kept which was not formerly known in this troublesome locality.

THE ANTIQUITY OF MAN: DISCOVERIES BEARING UPON THE QUESTION.

EVERY discovery and incident helping to constitute, as science, the newly established pursuits, archæo-geology and anthropology, is now receiving so much attention, that we are surprised no notice has been taken of a discovery stated by the *Echo du Nord* to have been made in the town of Lille, which, if correctly reported, should be capable of being turned into evidence in favour of theories of the formation of "recent" or earlier strata, or in disproof; though the facts detailed are too remarkable for us to say in which exact direction they should be considered to tend. Although the discovery is said to have been made on the morning of the 1st of April, we may assume that the French journals would not have given, as they have, some extended publicity to the story, without conviction of the character for veracity of the *Echo du Nord*. Moreover, part of the statement may be tested by any one able to visit the museum in Lille, where the object discovered is said to have been placed for inspection. The story is, that on the morning of the 31st of March, or 1st of April, whilst one of the houses of the Grand' Place of Lille was in course of demolition, a block of stone, broken in falling, disclosed, to the astonishment of the workmen, the form of a child petrified in the interior of the block; and, as though this much would not be sufficiently startling, it is added that one of the child's legs had been a wooden one. The whole figure, with the wood, had acquired the hardness of stone; and the form, extended in the attitude of sleep, with the perfect leg slightly bent, was completely preserved. The figure was found to be attached to the general mass by a cement that had been formed; and it could not be separated. The French authority, in directing the attention of the citizens of Lille to the object itself in the museum, does not hesitate to ascribe to it an antiquity of many thousand years. As regards the geological age of the stone, the only statement is to the effect that the block came originally from the quarries of the Oise.

Readers of the newspapers may have noticed that a fresh statement of the discovery of living toads in blocks of stone has appeared. Mr. Gordon Cumming is quoted as the authority. We have not the paragraph at hand; but, of course, every statement of the kind should show that the observer had examined carefully the block, to discover any fissure by which the toads might have entered.

The French men of science are finding reasons for believing in the high antiquity of the human remains discovered lately near Abbeville. They seem, at least, to have gone far to disprove the value of Dr. Falconer's test of sawing the tooth, in which he discovered gelatine; since they are able to assert that gelatine has been found in fossil teeth of much greater antiquity than any teeth to be found in "drift." M. Boucher de Perthes has many objects in his collection which appear more like the work of hands than the objects known as flint implements. These have been seen by the writer of this present note, when at Abbeville. Most of those found in the peat are unquestionable: others found in the "drift," we believe M. Boucher de Perthes would set no value upon. The statements as to the connexion of the tooth experimented upon in London, with the jaw-bone found at Moulin-Quignon, somewhat differ: Dr. Falconer's letter would seem to say that the tooth was one that had been found detached, near to the bone; whilst the recent statements at the Academy of Sciences seem to imply that the tooth had merely belonged to the collection of M. Boucher de Perthes; who, it is added, had always expressed doubts about it, and refused to guarantee it. Whilst these questions are debated, there are French men of science who are seeking to explain the effects of stratification by different theories from those which are received. Whatever the issue of the many branches of investigation into the history and antiquity of the earth's strata, and of the human and animal life upon it and within, there are few men to whom so much will be owing as to M. Boucher de Perthes.

Since these notes were penned, a second letter by Dr. Falconer has appeared, giving an account of meetings held in Paris, and further and very careful researches at Moulin-Quignon, in all which he had assisted. The chief result, admitted equally by Englishmen and the French, is that the bone exhumed by M. Boucher de Perthes, as well as "flint-implements" having characteristics which had led some of the English men of science to regard the implements as forgeries, could not have been inserted in the strata by the workmen. The French go further, and say that the jaw and the implements alike are contemporary with the deposition or formation of the strata. Dr. Falconer still doubts whether the jaw is of any very great antiquity. Whichever way the conclusion be arrived at, as to the bone, the discovery in Lille, *if authentic*, should help to the decision.

THE PEABODY FUND.

THE trustees, by the secresy in which they shroud their steps, are lessening public confidence in the wisdom of their proceedings. It is now reported that they have purchased a portion of the long vacant ground in Victoria-street, Holborn-hill.

Dr. S. Gibbon, on the part of the Board of Works for the Holborn district, has addressed a communication to them, urging the eligibility of the Holborn district for the erection of dwellings for the industrial classes, for various reasons, which he gives, especially:—

1st. Because the number of the existing houses is inadequate to the population, as is evidenced by the numerous cases of overcrowding and illegal occupation of dark cellars, which are constantly demanding the Board's attention; and by the fact that a few years since 348 houses, with many more in the adjoining parish of Clerkenwell, were taken down in this district for street improvements in the Holborn Valley. These 348 houses, which accommodated about 1,943 families, and 4,176 individuals, have not been replaced; therefore it was not surprising to find at the census, 1861, that the population of one sub-district averaged 4·4 families, and 15·5 persons to each house.

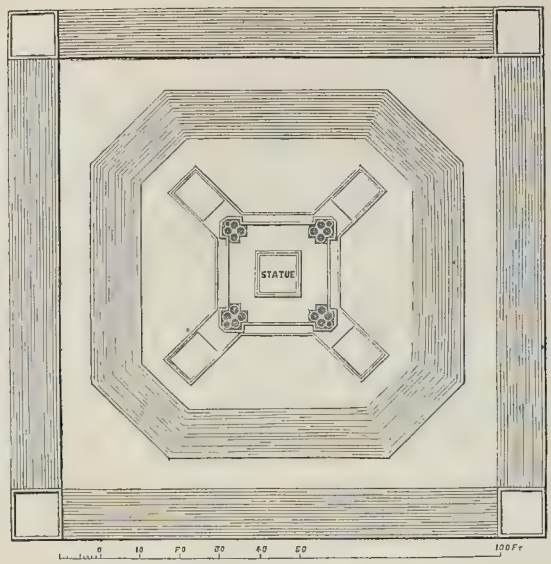
2nd. Because most of the houses at present occupied by the poor are of ancient and, in a sanitary point of view, of very faulty construction: crowded together in narrow courts and alleys, they are defectively lighted, often built back to back with other houses, so as to be incapable of efficient (*i. e.* through) ventilation. The dust-bins, waterbuts, and water-closets, formerly cesspools, are situate in the basements. Originally designed for one, they now contain from ten to fifteen families each. It is believed that the erection of a few blocks of cheerful and wholesome dwellings would necessitate the rebuilding of these old houses, which are now with difficulty kept fit for human habitation.

Is it certain that building houses is the best thing the trustees can do?

THE ARCHITECTURAL MUSEUM.

THE fifth lecture of the session at the Architectural Museum, in the South Kensington Museum, was delivered on Tuesday, May 19, by Mr. William White. The lecturer first called attention to the purposes of the Architectural Museum, and of the lectures annually given in it. These were meant, he said, not so much for technical instruction, as for mutual improvement by means of discussion; and the proper subjects of them were not the general principles and theory of architecture, but rather how the various subordinate branches of art that are exercised under the architect's direction, might be most successfully cultivated: how, in the words of their president, "the artist workman might be converted into the working artist."

His subject was the wrought-iron work of the Great Exhibition of 1862. He had taken notes of the various objects at the time, and he now freely criticized what he had seen, believing that without free criticism there was no way of arriving at a higher perfection of true art. The following is a sketch of Mr. White's observations:—Metal work may be divided into two classes, wrought work and cast work. Wrought work holds the higher place in art, though cast work is of more practical utility, especially in large works, owing to its cheapness. Each requires a treatment proper to the material: forgetfulness of this simple principle is the chief cause of errors in design and taste. Cast-iron is brittle: wrought-iron is elastic. By casting we can obtain a perfect mechanical uniformity, but wrought-iron shows the hand and skill of the workman, and can be counted good only when it shows a skilful touch. Annealed cast-iron, or, as it is commonly but incorrectly called, "malleable cast," is often used in defiance of the true principles of art, as an imitation of wrought-iron. This use is to be condemned, for this material wants the tenacity and elasticity of wrought-iron; still the material has a legitimate use as cast. The beauty of wrought-iron work depends upon the workmanship being fully shown, as well as the nature of the material. The drawing out and fining of good wrought work shows at once that it could not have been cast, and could not stand if it were cast. The structure and the surface ought to indicate the nature of the process by which it was formed: twisted iron is in vain imitated by filed spirals: the effect of such shams is always unsatisfactory. Care must be taken that decoration does not interfere with real usefulness, or with the strength of the work. In illustration of the principles advocated by the lecturer, he drew attention to the points of excellence or defect in many of the chief works exhibited in 1862; showing sketches of some, and producing others kindly lent by the owners for the occasion. At the conclusion of the lecture, Mr. Skidmore offered some remarks, and proposed a vote of thanks to Mr. White, which was heartily responded to.



VITAL STATISTICS OF MELBOURNE, AUSTRALIA.

SOME vital statistics given in the report of the Registrar General of Melbourne have much interest. In the month of December, 1862, the deaths in Melbourne were 393, or a daily average of 12·68. This shows a considerable increase in the rate of mortality compared with that of the same month in the year before, when it was 8·11 per day. In 1861, the deaths in December were 299, in 1860, as many as 525, and in 1859, 479. Of the 393 deaths in December, 1862, 259, or nearly 66 per cent., were children under five years of age; and 134, or rather more than 34 per cent., were beyond that age. This is sadly like the statistics of infant deaths in the mother country.

The number of deaths throughout the district, during the quarter terminating on the 31st December, 1862, amounts to 830, against 738 in the corresponding quarter of 1861.

The death rates of the quarter for each 1,000 in the different parts of the district of Melbourne, vary very greatly. In Melbourne proper, the rate was 8·75. If the other quarters correspond with this, the yearly deaths of this capital would be 35 in the 1,000—equal to the average of Manchester township. But in east Melbourne the death rate in the quarter was only 2·48 in the 1,000; North Melbourne and Carlton, 8·16; Fitzroy Municipality, 5·33; South Yarra and Prahram, 4·81; Emerald Hill and Sandridge, 5·16; St. Kilda and Brighton, 4·45; Doutta Galla and Keilor, 3·56; Boroondara and Heidelberg, 2·27; Cut-paw-paw, 3·05; Hobson's Bay, 1·74, or only 6·96 in the 1,000. We have not just now the means at hand of knowing to what extent the death rate of the town of Melbourne may be affected by the deaths of persons who may have been brought from other neighbourhoods to the public institutions; but if this cannot be shown to be to a considerable extent the case, it is clear that the town of Melbourne requires sanitary care.

Besides the chances of life and death, the price of provisions is a matter of consequence: it may, therefore, be useful for those who intend to emigrate to Australia to compare the following list of the chief necessaries of life:—Bread, per 4 lb. loaf, 6d. to 7d.; apples, per lb., 4d.; meat, 3d. to 5½d.; pork, 7d. to 9d.; dry onions, 1½ to 2d.; potatoes, per cwt., 6s. to 9s.; cabbages, 2d. to 1s. each; sugar, 4d. to 6d. per lb.; tea, 2s. to 3s. 6d.; coffee, 1s. 6d.; tallow candles, 6d. to 7d.; sperm candles, 1s. 4d. to 1s. 6d.; cheese, 9d. to 1s. 6d.; fresh butter, 2s. 6d. to 2s. 9d.; salt butter, 1s. 6d. to 2s.; ducks, per pair, 6s. to 7s.; eggs, per dozen, 1s. 8d.; geese, 5s. to 6s. each; fowls, per pair, 4s. to 4s. 6d.; turkeys, 7s. to 12s. each; milk, 9d. per quart; English beer, 6d. a glass, 1s. 6d. a quart; ditto, bottles, 12s. a dozen; colonial beer, 9s. a dozen; gas, 16s. per 1,000 feet; wood, 12s. to 18s. a load; coals, 2*l*. 10s. per ton.

THE PROPOSED NATIONAL ALBERT MEMORIAL.—*Plan.*

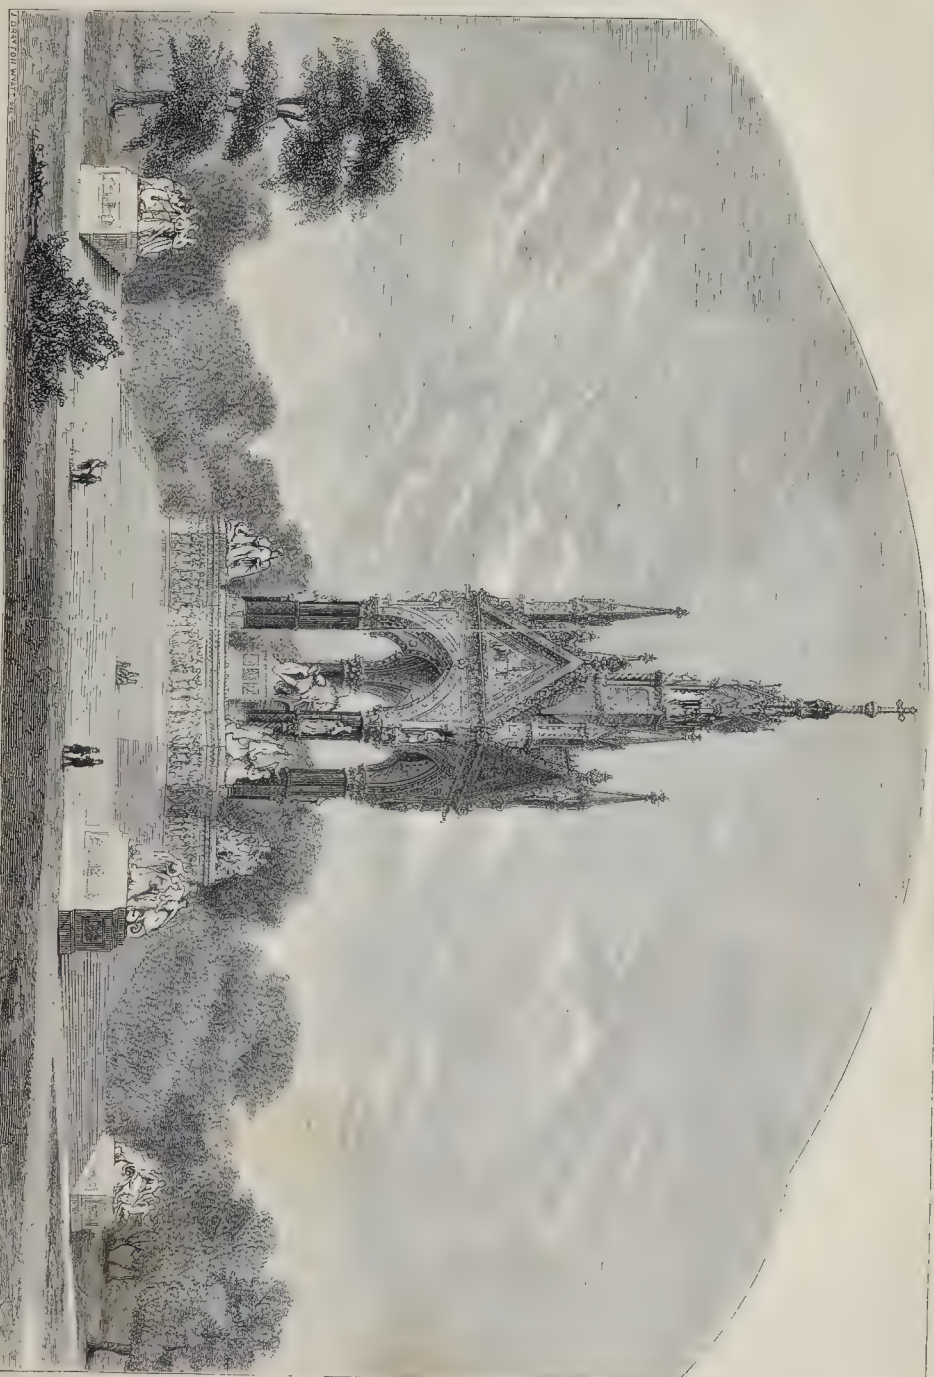
SOME ODDS AND ENDS.

Short-hand Writing.—The preface to a small work on Brachygraphy, published by J. Gurney, March 1st, 1778, mentions as a curious fact, that it was an art then unknown to any people in the world except to the subjects of the king to whom it was dedicated, George III.; and adds that, although it was known to Cicero, who instructed and employed persons to practise it in the Roman senate, no avail was made of it in this country till the year 1588, when Dr. Timothy Bright printed a treatise, entitled "Characterie, or the Art of Short, Secret, and Swift Writing by Characters," which he dedicated to Queen Elizabeth, under whose letters patent it was published. The author proceeds to undertake a task that would inflict upon many more modern writers an infinity of trouble; namely, to explain, in person, to any purchaser of the book, such passages as he may not immediately comprehend, and to promptly attend to any letter stating such difficulty of comprehension, which might be addressed to him, post-paid. We presume he would reply to these in short-hand. But the offer is indicative of the intimate relation between reader and writer on out-of-the-way subjects when the polite arts were not so generally diffused as in our own age.

Quantities.—It may be some satisfaction to such of our readers as are stumbling over the first difficulties in the art of taking out quantities, to know that equal obstacles beset the paths of students of other subjects. Grammar, logic, mathematics, arithmetic, algebra, and natural philosophy, have their abstruse and harassing quantities, as well as building materials. There is, in fact, scarcely any end to quantities. By way of proof, we enumerate:—Moral quantity (that which depends on the manners of men and the free determination of their wills, as good and evil, dignity and power, rewards and punishments); natural quantity (such as weight, motion, cold, light, thickness, and thinness); notional quantity (that is, a quantity arrived at by the operation of the understanding, relating, for instance, to the extent of the mind's capacity, or of its conceptions); permanent quantity (extension into length, breadth, and quantity); successive quantity (that which is applied to time and motion); transcendental quantity (the continuation of the existence of a being); continued quantity; discrete quantity; simple and compound quantity. The quantity of matter in a body, and the quantity of motion in a body, are further varieties. The simple measurements or cubing of building materials may be considered a mental recreation by contrast with these untangible quantities.

Curious Names of Northumbrian Places.—There are many singular names of places in Northumberland. Not the least curious are Allgood, Blinkbonnie, Biteabout, Clickemin, Carrylouse, Coalhouses, Coatyards, Coldcoats, Middlethread, Makemrich, Moneylaws, Monkseaton, Nunriding, Roguery, Synderhope, Sheepwash, Twicebrewed, Thrivewell, and Unthank. Places on the lines of old Roman roads bear indicative names, such as Remridge, Rejerodge, Cawledge Currage, Corridge, Dunridge, Edgewell, Ferneyridge, Greenridge, Harperidge, Highridge, Longridge, Mellsridge, Nunridge, Quitreway, Stamfordham, Todridge, Usway, Yasridge, Whitridge, &c. The names, too, of places along the route of the great Roman wall speak for themselves:—Walltown, Whalton, Wallington, Wallbottle, Walridge, Harewalls, Cocklaw Walls, Wall, Wallhouses, Thirlwall, Gunnerswall, and Wallsend. The sites of camps and other Roman settlements are indicated in names:—Rochester, Rudchester, Hedchester, Fernechester, Chesterhope, Greenchester, Whitchester, Chesterwood, Oatchester, and Chesters. The terminals most peculiarly Northumbrian are biggin, bottle, bothal, bogg, croft, cleugh, eals, flatt, fell, gate, haugh, hoe, hag, hope, kirk, lin, mire, peth, peel, rigg, rim, shaw, shield, slake, syke, twisle, &c. Some of these forms are reversible: kirk, for instance, is a prefix as well as an affix, Kirle Harle, or Nunny Kirk. Lin is another instance: there are Routing Linn and Lowlin, as well as Linton, Linmouth, and Linbriggs. It is further noticeable that although the Danes frequently invaded Northumberland, there are but few places owning Danish names.

Ancient Britain.—The secretaries of the Berwickshire Naturalists' Club, Mr. Robert Embleton and Mr. George Tate, F.G.S., have recently issued their annual volume perpetuating the transactions of that body. The matter in it of interest to our readers consists of Mr. Tate's accounts of the exploration of several traces of Ancient Britain among the Cheviot hills. There is evidence, in the great number of ruined buildings, to show that 500 ancient Britains lived in tracts on which there is now but one solitary shepherd's cot. A town, several forts, and numerous hut circles, have been uncovered; that is to say, the immense accumulations of earth upon the ruins of them have been removed by a staff of explorers, under the practical direction of Mr. Coulson, Corbridge. Besides these, of which we have informed our readers from time to time, an exploration has been made of a huge circle of large stones, some standing, some overthrown among the heather, on the north side of the Three Stone Burn, near Cheviot. The stones vary in height and in distance from each other. The tallest is 5 feet 5 inches; the shortest 21 inches high. One of an intermediate size, 3 feet 9 inches, is 10 feet round. The plan of the so-called circle is elliptical, measuring 112 feet by 96 feet. On this elliptical line the stones are placed singly, at unequal distances, the two nearest to each other being 13 feet 2 inches apart; the two most distant from one another 31 feet apart. Allowing that there is a missing stone in a space measuring 57 feet from stone to stone, we have here a mystic circle composed of fourteen huge blocks of porphyry. What was its purpose? To ascertain this, excavations were made along the circumference and round some of the stones: trenches were cut at right angles through the inclosure, and again at some distance from the centre down to the natural surface and below it. This examination revealed nothing except a little charred wood here and there, and one flint arrowhead. No walls, no ditches, nor rampiers, nor further relics were found. By an exhaustive process Mr. Tate comes to the conclusion that this circle of unhewn stones "was the temple wherein the ancient Britons of the district assembled to join in the religious rites performed by their Druid priests." In corroboration of this view he mentions a Gaelic phrase, pointed out by Dr. Wilson,—"Am chiel thu dol do'n clachan,"—Are you going to the *stones?*—for are you going to church, which seems to imply a traditional association of idea, of worship and the monolithic rings of our ancient population. The cost of the explorations was defrayed by the Duke of Northumberland; and the gentlemen upon whose estates the antiquities are situate, Messrs. F. Sitwell, M. Culley, and W. Roddam, afforded every facility in their power. The volume also contains papers on Jedburgh by Mr. Jeffrey; "On the Northumbrian Dialect," by Mr. Ralph Carr; "On the Battle of Flodden Field" (illustrated); "On Barrows at Ford," by the Rev. W. Greenwell; "An Account of an Ancient British Grave, discovered at North Sunderland," by the Rev. F. R. Simpson; with a "Description of the Calvarium of a Skeleton found therein," by T. B. Davis, M.P., F.A.S.; "Notices of the Remains of Ancient Camps at Milne-graden," by Mr. D. Milne Home; "Miscellanea Zoologica," by Mr. R. Embleton; and a form of notice respecting things worth observing and preserving distributed among the persons employed in the formation of the Berwickshire Railway, 1862. As this may be useful to those in the neighbourhood of similar works, who are forming or filling museums, we condense it:—



Geology: old Rocks.—The lines of junction between different rock formations should be observed to note how the more recent rocks have been deposited over the edges of the older rocks, after the latter had been elevated and contorted. Any metals, unusual minerals, crystals, fossil remains, should be as little injured as possible, so as to allow drawings to be made on the spot.

Superficial Deposits.—Observe the way in which the old rocks are covered by beds of clay, gravel, and sand; and whether they appear to have been ground down and smoothed by the passage over them of heavy and rough materials; and if so, in what direction the scratches and marks are made. Any fossil remains found in these beds, bones or teeth of animals, shells, or plants, should be preserved.

Antiquities.—Any coins, and weapons or other implements, whether made of stone, wood, or metal, should be carefully preserved and a note taken of the place and stratum in which they were found. Any sculptured stones or stones bearing inscriptions should be taken care of. If any graves or skeletons are discovered they should remain undisturbed until they are properly examined; and the greatest care should be taken to preserve skulls or urns from being broken. In the event of any discoveries being made under any of the above heads, notice thereof should be sent to, &c.

A DANGEROUS FOOT-PATH.

FOR years past the footpath which passes on the west side of the road opposite the Islington Agricultural Hall, the Fever Hospital, and for a long way northwards, has been one of the most dangerous in the metropolis, owing to some levelling which has been made in the carriage-road in stage-coach days. This footpath has been left standing up above the road at a height of from 2 feet to that of 3 feet, 4 feet, and upwards. In frosty weather, during fogs, and in dark nights, this is very dangerous, and has caused many accidents. Now that we are having monster musical entertainments, dog-shows, and cattle-shows, which attract large multitudes to this neighbourhood, the matter is of greater consequence even than it was formerly. It will be expensive, and inconvenient to the adjoining houses, to lower the foot-path; but there ought to be an iron railing placed along the curb of this inland cliff; or it might be formed into steps.

THE NATIONAL ALBERT MEMORIAL.—THE SELECTED DESIGN: BY MR. G. G. SCOTT, R.A.*

[* See p. 361, ante.

MODERN SCHOOL OF SCULPTURE.

IN an interesting and valuable lecture recently delivered by Professor Westmacott before the Cambridge School of Art,* the lecturer expressed the following views:—

"There is still great danger to the interests of true art from the propensity there is in sculptors so frequently to appeal only to the sensual feelings of their public, and to look a-field for their subjects in classical dictionaries and in obsolete fables, rather than to draw from their own feeling. Thus they are led, as we constantly see, to produce works only to exhibit form; only to show the ability of their authors in the manipulation of a difficult material, or to attract attention by addressing the mere sense.

Some additional force seems to be given to these remarks by the fact,—and it is a very interesting one,—of the movement that has been made by a small section of artists in the production of works of a sentimental and, usually, religious character. These reformers of art have discovered a great truth, too long lost sight of, that such art, so founded, is the highest and the best; and according to the opinion above expressed, even this principle, if once generally recognized, may be considered a possible ground for the improvement of all our art. It is a matter to be deplored, that with this noble impulse to incite them, some of the promoters of this movement have not fully recognized the advantage of practising their art upon the highest standard of form. This, there can be no doubt, has interfered with the good this school might have effected. Those who have studied and can appreciate the value of beauty,—it is in art as in everything,—are offended at what appears a silly prejudice and affectation in those who utterly repudiate its use. Why pure and noble thoughts and illustrations of sacred scenes and subjects should not be presented in the most pure, beautiful, and noble forms with which nature furnishes us, it is difficult on any theory to understand. To use the nude of the Greek *ideal* would be as absurd and objectionable as it would be incongruous and inappropriate in a Christian religious representation; but as we have the highest type of beauty in the noblest of God's creations, the human form, it seems a mere unreasonable prejudice not to make the figures in such compositions as beautiful and as perfect as their Creator produced them, when, as we read, 'God made man after His own image.' Purposely to represent actors in Scripture scenes attenuated, ill-formed, and of a vulgar commonplace class of form, is almost a mockery. It is true, the earlier artists of the revival, and even down to the fifteenth century, did this; but they knew no better. Art was then in its infancy. Their object was to express the subject, the idea; and their utter ignorance of rules of art is evident. Their work is impressive from its earnestness, not from its defects—in spite of its shortcomings, not because of them. Unfortunately the defects are what a certain school seems to admire and to think worthy of imitation. Material art, good or bad, may be copied; but simplicity and earnestness must be innate, part and parcel of the artist's own idiosyncracy: and if he has these, how strange it seems that he should prefer to give them expression in language which he knows to be imperfect, of a bygone period, and showing a totally different condition of art-knowledge from his own. How can an artist of the middle of the nineteenth century pretend to find a true language of art,—that is, true to him and to his time and public,—in the strange, rude, meagre forms of seven or eight centuries ago?

Still, this impulse, if allowed to develop itself, may, in spite of these little affectations, work great good to art. Some there may be who may find their market-advantage in following in a peculiar and exceptional wake, which has its class popularity, and, what is more to the point, its paying patrons. But there are among the artists of the new school true and earnest men who will undoubtedly have the glory of advancing art of a pure and noble kind by their efforts to disseminate a feeling for pure and beautiful subjects, in opposition to the false and the meretricious and the tricky that has to some extent been forced upon public attention here and elsewhere.

Sculpture might have better taken an impulse from the standard of feeling approved by this movement, than from the more objectionable, even if fascinating, school of sensationists. It is not desirable, even if it were possible, to restore the style or mode of ancient Greek sculpture; but it might conduce greatly to the improvement, the dignity, and the success of this art, if modern sculptors would bear in mind the exigencies, the conditions of its practice. From its very nature, confined to form and without the charm and fascination of colour,—for the tinting and smearing experiments that have lately been witnessed cannot fairly be considered in the category of colour, that is, if nature's colouring or Titian's colour mean anything,—limited, as I have said, in its means by this one condition Form, sculpture is not fitted for picturesque, flighty, or very fanciful treatment."

* Now published by Bell & Daldy, Fleet-street.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

AT the Annual General Meeting, May 13th, (Dr. Lee, F.R.S., President) the Auditors delivered in a report and balance sheet of the accounts for the past year, by which it appears that 571*l.* 6s. 7d. had been received, and 515*l.* 17s. 10d. expended, and a balance left in favour of the Association of 55*l.* 8s. 9d. Every account against the Society had been paid, and for the quarterly journal, and two parts of the *Collectanea Archæologica*. The Associates were called upon to give more assistance towards the latter work, as an important archæological publication. A third part was announced as nearly ready for delivery.

Thirty new Associates had been elected, fourteen had withdrawn, eight were deceased, and five were recommended by the council to be erased from the list for non-payment of their subscriptions. The Treasurer read notices of the deceased members. The usual votes of thanks to the officers and council having been passed, a ballot was taken for their successors for 1863-4, when the following list was returned:—

President -R. Monckton Milnes, M.P., D.C.L.
Vice-Presidents.—Sir Charles Rouse Boughton, Bart.; James Copland, M.D., F.R.S.; George Godwin, F.R.S., F.S.A.; Nathaniel Gould, F.S.A.; James Heywood, F.R.S., F.S.A.; George Vere Irving; T. J. Pettigrew, F.R.S., F.S.A.; and Sir J. Gardner Wilkinson, D.C.L., F.R.S.
Treasurer.—T. J. Pettigrew, F.R.S., F.S.A.
Secretaries.—J. R. Planché, *Rouge Croix*; H. Syer Cuming; and Edward Roberts, F.S.A.
Secretary for Foreign Correspondence.—Thomas Wright, M.A., F.S.A.
Palæographer.—Clarence Hopper.
Curator and Librarian.—George R. Wright, F.S.A.
Draftsman —Henry Clarke Pidgeon.
Council.—George G. Adams; George Ade; William Harley Bayley, F.S.A.; Thomas Blashill; John Gray; W. D. Haggard, F.S.A.; Matthew Harpley; Gordon M. Hills; John Lee, LL.D., F.R.S., F.S.A; Edward Levien, M.A., F.S.A.; William Calder Marshall, R.A.; George Maw, F.S.A.; Thomas Page, C.E.; Richard N. Philipps, F.S.A.; Edward Joseph Powell; J. W. Previté; and Samuel R. Solly, M.A., F.R.S., F.S.A.
Auditors.—T. W. Davies and J. V. Gibbs.

The Congress was fixed to be at Leeds, at the beginning of October, under the presidency of Mr. R. Monckton Milnes, when Ripon Cathedral, Fountains Abbey, Kirkstall Abbey, Aldborough, Wakefield, Pontefract, &c., will be visited.

PROTECTION OF IRON FROM RUST.

IN course of a discussion on various subjects at the Society of Arts last week, in a Committee of Reference on Mechanics and Engineering, Mr. C. F. Varley said:—All attempts to use galvanised iron for roofs in large towns failed from the smoke attacking the galvanised metal, and tinned iron did not resist the action of smoke so well even as zinc. All the experiments he had seen of coppering iron had failed unless it was done in so expensive a manner as not to be practicable for any extended use of it. What they required was a covering of lead, or lead and antimony, put upon the iron so as to combine the stiffness and cheapness of iron with the durability of lead. Owing to the multiplicity of telegraph wires in the metropolis danger might result from the falling of long spans of wire through their being rusted away. Col. Schaffner said the coverings of houses in some countries were of tinned iron. In America this was largely used instead of lead. In St. Petersburg and Moscow iron was mostly used, but it required frequent painting. In the telegraph service he had tried many expedients for the preservation of the wires by galvanising and the use of linseed and other oils. He had boiled the wires in linseed oil with beneficial results; but they would decay. Mr. Varley, sen., said, if iron were heated and passed through oil, the pores were filled up, and the metal lasted a long time. Mr. Reveley mentioned that iron heated and covered with asphaltum or mineral bitumen in the solid state had resisted a moist atmosphere for fifteen years. He had found the natural asphaltum the best, and he had not succeeded so well with liquid asphalte. With all other materials he had found the rust penetrated underneath. Mr. John Braithwaite said that the mode of arresting it adopted by his father, and which he had himself followed for the last fifty years, was by painting the iron with red lead. Painting with white lead was of no use, as the acid used in the preparation of it produced swelling effects. He had inspected a well where he had fixed an engine forty-five years ago. The rods which had been placed in this well, 200 feet deep, were painted with pure red lead; and on taking them up, he found that their weight was precisely the same as when they were put down forty-five years ago.

CHURCH-BUILDING NEWS.

Grantham.—A preliminary step has been taken towards the restoration of the church at Grantham; at least, notice has been given of a vestry meeting "for the purpose of considering the propriety of obtaining a report from some eminent architect on the present state of the parish church, and the works required to be undertaken for its restoration, and making such orders thereon as may be deemed expedient." Mr. Scott, we understand, is to be requested to furnish a report of the present condition of the church, and the probable cost of restoration.

Windsor.—The contributions towards the erection of a new church in the vicinity of Queen's Villas have justified the promoters in determining on its immediate erection, to further which six architects have been solicited to furnish plans. These, says the local *Express*, are to be submitted within a limited period; and, on the adoption of the favoured one, the work will be immediately proceeded with.

Devizes.—St. John's Church, Devizes, has been re-opened, after it had been closed for twelve months for the purpose of restoration and enlargement. In pulling down the old arcades of the nave, a large number of ancient Norman carved heads and mouldings were found built into the walls; and Mr. Leach, the proprietor of the Castle Grounds, has just erected a Norman doorway from these stones. The lantern was at some time or other shut off by the construction of a ringers' loft, and a series of intersecting arches, with columns and windows, of a peculiar structure, are thus hid from view. The present alterations did not contemplate a restoration of these features. The old waggon-headed roof of the nave has been replaced by a new open timbered roof with curved principals, close-boarded on the top of rafters, and stained. The unsightly and dangerous-looking leaning columns (some of which were as much as 23 inches out of the perpendicular) have all been removed, the arcading has been entirely rebuilt, and the church extended one bay (13 feet) to the westward. The pillars are built of alternating courses of Box and Chilmark stone. All the interior walls of aisles, transepts, chapels, &c., have been repaired and cleaned off to the stone-work, to correspond with the new bay, and there is no plastering throughout. Where the gallery and organ stood, at the west end, there are now a doorway and window: the latter requires to be filled in with stained glass. The old high-backed pews are substituted by light open seats, with buttresses on standard ends, stained and varnished. The ground has been considerably lowered, and a body of concrete, 6 inches thick, placed over its entire surface. The flooring of the pews is of new deal, and the centre and cross aisles are paved with Minton's black and red tiles. Haden's heating apparatus, with the latest improvements, has been applied. The chancel within the altar rails has been partly re-decorated. The sittings have been increased from 558 to 703, notwithstanding the removal of the gallery. About 150 are free. The works have been carried on from plans drawn by Mr. W. Slater of London, the contractor being Mr. B. Mullings, of Devizes, builder. The entire cost of the works will exceed 2,800*l.*

Cherill.—The church at this place is now undergoing alterations and repairs. It is to be repewed throughout, and a new vestry built, with other additions, and it will be heated with Haden's warming apparatus, the entire expense being defrayed by Mr. G. H. W. Heneage, of Compton House. The whole of the works are intrusted to Mr. B. Mullings, of Devizes, builder.

Great Massingham (Norfolk).—This old church was re-opened for divine service on April 29th, after having undergone considerable restorations. The nave, south aisle, tower, and porch roofs have all been made new out of English oak, and the entire benches, pulpit, &c., prepared and fixed out of cedar, all the wood kindly given by the patron, the Marquis Cholmondeley, of Houghton Hall, besides a donation of 500*l.* The porch has been

taken down and entirely restored by the rector, the Rev. C. Grenside. The restorations have been carried out by Messrs. Curtis & Son, builders, Litcham, under the superintendence of Mr. D. Penning, Suffolk. The entire cost is about 2,000*l.*

Congleton.—The organ at Astbury Church, formerly standing in the western gallery, it has been decided is to be placed again over the western door on a platform supported by two stone fluted columns, of similar character to those formiog the piers of the church. The organ will project but a little way into the church, the blowing apparatus being placed in a chamber behind the west walk. The organ stands in the centre, between the two western windows.

STAINED GLASS.

St. Giles's Church, Northampton.—Mr. W. J. Peirce has lately presented to his parish church (St. Giles's) a stained glass memorial window, the work of Messrs. Powell, of London. The window forms one of a series representing scenes from the life and death of the Redeemer; the subjects illustrated in the present window, which is divided in two parts, being the "Scourging of Christ," and "Christ bearing the Cross."

Shipnall Parish Church.—The *Shrewsbury Chronicle* states that two new stained glass memorial windows have been erected in the Moreton chancel of this old edifice. The first one, upon entering the chancel, is dedicated to the memory of the late Mr. R. A. Slaney, M.P., and comprises representations of the Scripture texts engraved underneath, viz., 1st, "Whosoever drinketh of the water that I shall give him shall never thirst;" 2nd, "Blessed are the merciful, for they shall obtain mercy;" 3rd, "Go and do thou likewise." The last-mentioned is a representation of the good Samaritan relieving the man wounded by thieves. The remaining portions of the window are filled up with sundry devices. In the second window are illustrations of the following passages of Scripture, viz., 1st, "Suffer little children to come unto me, and forbid them not;" 2nd, "Thou art gone on high Thou hast led captivity captive;" 3rd, "Glory to God in the highest, and on earth peace." The other portions of it are completed by designs similar to those in the other window.

Prestolee Church, Lancashire.—The great west window of this church has been prepared by Messrs. Ballantine & Son, of Edinburgh. It is designed in the Early Decorated style, with four upright lights and geometric tracery. In the four lights is a representation of the Nativity, combined with the Adoration of the Shepherds and the Wise Men. The composition embraces twelve figures, the Virgin and Child with Joseph being in the two centre lights, the Shepherds kneeling and presenting their humble offerings on the right, and the Magi presenting their princely gifts on the left. Behind the central group, a portion of the structure is seen where the birth took place, and beyond is a receding deep blue sky, in which the Star of the East shines over the central figures, while groups of angels hover over the Holy Family, announcing to the worshippers the glad tidings of great joy, and proclaiming "Peace on earth, good will towards men." In the bases are the emblems of the evangelists and angels bearing scrolls with appropriate texts, and combined with the tracery. Each upright compartment has its canopy with mosaic groundwork, so as to preserve the requisite architectonic propriety.

Guildhall, York.—At a special meeting of the city council, held on the 24th of December last, it was resolved that a subscription memorial window to the late Mr. Alderman Meek should be placed above the sessions court in the Guildhall. The expense was estimated at 300*l.* A design for the new window, prepared by Mr. Frederick Bell, of this city, architect, has received the sanction and approval of the council, and also of the committee. A number of tenders for the furnishing of the new window has been delivered, and that sent in by Messrs. Hardman & Co., of Birmingham, has been accepted. The work will be forthwith commenced. The glass of the old window will be taken out under the supervision of Mr. Bell, who has been requested to separate the old from the new glass, and report to the committee how the former can be effectually preserved in one of the windows of the Guildhall. The subjects of the new window (of five lights) are intended to illustrate the charter granted by Richard II., on the 18th of May, 1396. The centre light will contain a full-length figure of Richard II. in armour. On the right hand of Richard II. will be William de Selby, the first lord mayor. He will be represented as having just received the sword. On the King's left will be the figure of Sir William Frost, Knight, who was lord mayor in 1396-97, when the great charter of the city was granted, and will be represented as just having had the document presented to him. The extreme right and left lights of the window will have figures of the first two city sheriffs. All the figures will be represented in the costume of the period of Richard II., in their gowns of office, and with beards and hair as worn at that time. They will be placed under canopies and on diapers of the same period as the architecture of the Guildhall. In the tracery will be the arms of Richard II., with the crown, crest, cypher, cognizance, and supporters; the arms of the city of York, backed by the sword and mace, and surmounted by the Spanish hat; and the city arms as before, impaled with those of the late Alderman Meek as lord mayor. The lower part of the window will be filled in with arms of five of the witnesses to the charter.

Boroughbridge Church.—The entire clerestory windows of Boroughbridge Church, numbering sixteen compartments have been recently filled with stained glass from the establishment of Mr. H. M. Barnett, of Newcastle-on-Tyne. The windows, in design, represent the "Te Deum," the verses of which are inserted in scrolls held by angels,—one in the centre of each compartment, with wings partly extended. The remaining portiOns of the windows consist of coloured geometrical forms, filled between with foliage. There is also, above each window, a quatrefoil containing the sacred monogram of Christ.

PROVINCIAL NEWS.

Winchester.—In compliance with a resolution, the mayor has called a public meeting of the inhabitants to consider the question of repairing or restoring the City Cross. The sum required to completely restore the Cross is estimated by the city surveyor, Mr. W. Coles, not to exceed 240*l.*, and the council will probably vote 100*l.* towards the cost.

Totness.—The Devon and Cornwall Bank, which is just completed, is of three stories, with a frontage of 48 feet to the main street. The façade of the ground-floor story consists of six arched openings, the piers and segmental arches of which are of finely-wrought granite, from Messrs. Freeman's works at Penryn. The capitals of the piers are carved in Portland stone. The features of the next story are two central semicircular-headed windows, flanked on each side by an oriel window, with banded masonry of blue limestone between the openings. The upper story consists of an arcade of seven semi-circular windows, surmounted by a bold cornice. The building, internally, comprises commodious bank offices and manager's apartments. The architect was Mr. Hine, of Plymouth, whose design was selected in competition.

Bath.—The citizens of Bath have subscribed 3,000*l.* towards a memorial of the late Prince Consort, the money to be expended in adding a new wing to the Bath United Hospital.

Runcorn.—The construction of a bridge over the Mersey will shortly be commenced by Messrs. Brassey & Ogilvie. Mr. Brassey has already taken a house at Runcorn for office purposes. The bridge is to be an iron one.

Dundee.—The new court-houses are advancing towards completion. The centre portion of the new building is a portico, formed of four columns of the Tuscan order, the walls on either side being recessed by pilasters of the same. The two extreme wings formerly built being in this style, necessarily furnished the key of the whole façade, and the central mass of building is thus in harmony with the outlying wings. In the pediment of the portico it is intended to place a piece of sculpture, filling a triangular space 34 feet in length and 7 feet high, the centre of which will be occupied by the Royal Scottish arms. This piece of sculpture has just been completed by Mr. P. B. Smith, of Edinburgh. The principal figures are cut out of stone to a depth of 2 feet 4 inches. The lion and the unicorn supporting the shield have each been hewn out of a block of stone weighing 4 tons, and for the whole design 32 tons of stone were required. The stone was taken from the Dunmore quarry at Bannockburn. The court is 40 feet by 45 feet, and 38 feet in height. The Procurator's library is 32 feet long by 22 feet 6 inches broad, and 16 feet high. The architect is Mr. Scott; and the mason work is being done by Mr. Haggart, and the plaster work by Mr. Adam; carpentry by Messrs. Kidd & Son. The local *Warder* states, that the "Chamber Practice" court, with the Sheriff-clerks' and Procurator-Fiscal's rooms will be ready for use by Whit-Sunday, and that by the next assizes everything will be ready for the accommodation of the circuit court.

MONUMENTAL.

The Wellington Monument at Liverpool was inaugurated on Saturday, the 16th inst.——The Undercliffe Cemetery Monuments at Bradford are thus spoken of by the local *Observer*:—There is no place about Bradford more generally frequented by the inhabitants than this City of the Dead. The situation of the cemetery is itself picturesque, and the ground has been well laid out. There are strong points of similarity between our cemetery and the Glasgow Necropolis, which, however, excels ours yet in monuments. But upon the whole the Undercliffe monuments are improving in taste as much as they are increasing in number. The introduction of granite, which agreeably varies the monotony produced by the superabundance of Yorkshire grit, claims special notice. Within the last year or two, several obelisks and columns of granite have been erected. At first, Aberdeen and Peterhead granites were the favourite materials. For the smaller monuments they are perhaps the best adapted. But the largest granite monument is an obelisk erected to the memory of the late Mr. Joseph Smith within the last three weeks. The Smith obelisk is erected at the end of the central avenue overlooking Bradford. Mr. Gay, the registrar, designed this obelisk. It is a gigantic monolithic needle, erected on a solid granite base, 9 feet square, finished off by a few simple mouldings. The monolithic needle is alone 22 feet 8 inches high. Mr. Sim, of Glasgow, was the contractor. He obtained the block for the needle from the Wigton Quarries, and the material for the base from Ardshiel. The Wigton silver grey granite is close in the grain and very free from blotches. Mr. Sim received a prize medal for a specimen of it sent to the Exhibition.——The Schiller Monument in Munich has been inaugurated. King Louis of Bavaria has erected it to the poet's memory at his own expense. The ceremony took place in presence of the members of the learned and artistic societies of Munich. At night, the students and members of the different corporations of the city, more than 1,500 in number, formed a procession by torchlight.

THE STAGE AND ENTERTAINMENTS.

Royal Italian Opera.—In *Il Barbiere di Siviglia* Madlle. Patti is fresher and brighter than ever; Mario still singing Almaviva better than any other living tenor can do it; and Ronconi *acting* Figaro to the like perfection. Who shall estimate the debt due to one who creates for the world such an opera as "The Barber?" A never-ending source of innocent, we would almost say, elevating joy! a well of pleasant, gleeful thoughts, lightening men's hearts! We do not reward creators sufficiently. *Le Prophète* is on the bills for Monday; but we do not yet hear anything of the new works promised.

The Haymarket Theatre.—The action of the new comedy, "Finesse; or, Spy and Counterspy," is laid in Messina, and it opens with a bright pleasant view of the sea-shore there, with distant mountains and gaily-decked vessels, painted by Mr. O'Connor. It is not an easy thing to write a good comedy, and we may not give the accomplished authoress of "Finesse" the credit of having achieved this. Still the piece is amusing, and gives Mr. Wigan, Mr. Buckstone, and Mrs. Wigan scope for some admirable acting. The first as an old French Doctor, part diplomatist but more man, shows all his accustomed skill and delicacy; while Mr. Buckstone, as a would-be sailor, now tipsy now sober, now fighting now dancing, secures continuous hilarity, and checks any rising thought as to want of art in the dramatist.

Polytechnic Institution.—So great has been the success of "The Spectre Drama," involving the most complete optical delusion ever effected, that the directors have been led to set apart Saturday morning in each week for those who are willing to pay half-a-crown to see it more quietly than can be done on ordinary occasions. Mr. J. L. King, moreover, explains very clearly the large plate-glass electrical machine, and the Rhumkoff coil; and Professor Pepper, besides his ghostly efforts, very spiritedly done, lectures on the new metal, Thallium, and gives some striking experiments. "Der Freischutz," from a humorous point of view, concludes the morning. A very elegant audience

last Saturday showed that the arrangement is likely to be successful. The Prince of Wales went on Tuesday, and was let into the secret of the arrangement.

Mr. Lumley's Benefit Performances.—The principal artists of Her Majesty's Theatre, such at least as were connected with the old management under Mr. Lumley, have come forward in the most liberal manner and proffered their services for three "Benefit Performances." A letter to that effect, with the names of the artists appended, headed by Signor Giuglini on the part of the gentlemen, and by Mdlle. Titiens on the part of the ladies, was sent to Mr. Lumley. The first performance will be given on Monday next.

THE ARCHITECTURAL ASSOCIATION.

THE usual meeting of members was held on Friday (the 15th inst.), at the House in Conduit-street.

The chair was taken by the president, Mr. Thomas Blashill.

The following gentlemen were, on ballot, elected members of the Association:—Mr. E. Dalby, Wantage, Berkshire; Mr. Henry Aldridge, 9, Albert-terrace, Richmond-road, Bayswater; Mr. William Seymour, Bayham-terrace, Camden Town; and Mr. Kopper, 24, Berkeley-square.

The President announced that, by leave of the authorities of St. Paul's Cathedral, the members of the Association would be allowed to examine the whole of the building on Saturday next, and that it would be necessary for them to assemble for that purpose within the church at two o'clock.

The question of appointing delegates to attend the approaching meeting of the Architectural Alliance was the next subject discussed; and, in answer to applications from the Association, the following gentlemen had expressed their willingness to attend in that capacity;—Mr. T. R. Smith, Mr. Rickman, Mr. A. Allom, Mr. Paraire, and Mr. Bunker.

On the motion of Mr. Spiers, seconded by Mr. North, a resolution was passed, directing that Mr. T. R. Smith, Mr. Allom, and Mr. Rickman be requested to attend as delegates; and that should any one of the above be unable to attend, Mr. Bunker be requested to act in his stead.

A letter was read from Mr. Paraire, tendering his resignation as a member of the ordinary committee. Some discussion ensued with respect to the desirability of accepting the resignation, and eventually a motion was submitted, to the effect that the resignation be not accepted; but, on a division, it was negatived, and the resignation was accepted.

Mr. Skidmore, of Coventry, then read the second portion of his paper on Architectural and Artistic Metal Work, which we give elsewhere.

CAPTAIN COOK'S MONUMENT.

A CORRESPONDENT writes,—"I had occasion a few days ago to visit Merton, near Wimbledon, on business. In this church there is a tablet erected to Captain James Cook, the circumnavigator, by his widow, and to other of her relatives; with a female figure in very high relief, in white marble, in the attitude of mournful resignation. This monument was by Wyatt, and he was paid 700*l.* for it before it left Rome. It deserves the attention of visitors, and is the only thing of interest in the church, with the exception of a monument of the Elizabethan age in the chancel. Some of Cook's descendants still reside near the village; and I understand a brother, sister, and, I think, father, were interred in Merton Church."

COMPETITIONS.

Pateley Bridge.—The case of Pateley Bridge, near Harrogate, shows how strangely competitions are occasionally managed. Some time last year a limited liability company was formed in that place for the establishment of gas and water works. In September, the company advertised in this Journal for plans and estimates to carry their project into execution, and offered a small premium to the successful competitor. How many gentlemen competed we know not; but we do know that up to the present time the directors have not arrived at any decision upon the merits of the several plans; nor indeed are their intentions settled as to the works themselves. Surely a period of seven to eight months is not necessary for the consideration of plans to supply a village of 300 houses with gas and water. Plans are made, contracts entered into, and works completed for towns of ten times the size in less.

High Wycombe.—The churchwardens of this parish mistake the province of Builders when they invite them, as in our present number, to submit designs in competition for seats for their ancient church with the *handsome* offer of 1*l.* for the best. Is there no one in the parish to tell them what is right?

Gateshead Town-hall.—The committee report that twelve sets of designs have been submitted by eleven competitors for the premiums of 100*l.* and 50*l.* offered by the town council. The following is a list of the competitors, with the sums at which they state their designs can be executed:—

Mr. John Wardle, Newcastle	£15,000
Mr. John Edward Watson, Newcastle	26,000
Mr. John Johnson, Newcastle	8,750
Messrs. Adamson & Ross, Edinburgh	25,000
Mr. Thomas Reay, Newcastle	19,000
Mr. Matthew Thompson, Newcastle (A)	8,000
Do. do. (B)	9,500
Mr. John Lamb, Gateshead	14,500
Messrs. Thomas Moore & Sons, Sunderland	18,000
Mr. Charles E. Anfield, Park-row, Leeds	19,000
Mr. A. M. Dunn, Newcastle	15,000
Mr. J. Ord, Carlisle, no estimate.	

Ald. Crawshay said it would have been better to have stated, in the conditions of the competition, what sum the council were prepared to expend on the construction of the town-hall, as several of the designs were quite unsuited for what the council required.

Girls' Industrial School, Coventry.—A correspondent writes,—"Who obtained the premium in the above competition? Did any one?"

Freemasons' Hall.—SIR,—As I have no other means of communicating with him, will you kindly afford me the opportunity of expressing my great regret to the author of the designs marked "*Experientia*," that an unfortunate accident has occurred to his ground-plan drawing. If I could have done so, I would immediately have informed him of the circumstance: being unable to do so, and being unwilling to let the drawing be shown in its damaged state, or that it should run the risk of further injury, I have had it repaired by a first-rate artist, and I trust that "Experientia" will kindly accept this expression of my sincere regret.

JOHN HAVERS, Chairman of Committee.

ARCHITECTURAL COPYRIGHT.

SIR,—With regard to your correspondent's remarks on the subject of architectural copyright in your number for May the 9th, I may remark that, having recently had occasion to study the Copyright Acts, I have been led to consider that a certain amount of protection, though imperfect, might possibly be obtained through the medium of the Artistic Copyright Act, 25 & 26 Vict., cap. 68, since thereby a copyright is granted upon registration, for a very small fee, as prescribed by the Act, to "any original painting, drawing, and photograph," with the exclusive right of copying, engraving, *reproducing*, and multiplying such painting or drawing, and the "*design* thereof," by any means whatever.

Now it appears to me that an architect's new design, when put upon paper, constitutes an original drawing, which, if duly registered, would be protected by the Act from being "repeated, copied, colourably imitated, or otherwise multiplied for sale, *hire*, exhibition, or distribution" (see Act, section 6), the penalty being the forfeiture of a sum not exceeding *ten pounds*, and of all the illegal copies; and as such penalty can be enforced by a magistrate, it would seem to be worth while for architects to try whether protection could not be obtained under this Act, for such protection does appear to me to be within the effect of the Act, as, generally speaking, the before-mentioned "original drawing," or the "*design thereof*," would be copied or reproduced for sale or *hire*, the term "hire" legally including anything done for pay or pecuniary gain or advantage.

F. W. CAMPIN.

THE POSITION OF ARCHITECTS AND ENGINEERS.

I READ with some interest Professor Kerr's address in your pages, and if I had time to spare, should like to take up the subject, and to have offered some remarks upon that paper generally. As my practice has been both architectural and engineering, I have had opportunities of knowing how the practice in these two professions differs, although both work with the same materials. An architect in the present day is subject to the whims and caprices of his employer much more than the engineer can or would be. In many cases the architect is employed, almost as a matter of form, to do the drudgery and battle with the builder. The builder dares suggest alterations and improvements to the architect's employer, and will generally succeed too. The engineer knows no such influence: his instructions, whether right or wrong, are law. The architect's directions may or may not be carried out, as the employer decides. The builder, for his own interest, can generally prevail on his employer to fall into his notions, stupid as they may be, and both are very often ignorant of art or fine taste. The architect is snubbed, must give way, and do the best he can under such disheartening circumstances. It is two matched against one, whose opinions are formed, sincerely believing, in their ignorance, that they know all about the matter. The builder under an engineer looks up to him with all reverence: he fears his knowledge and position. He knows the power given to him in carrying out his works: he dares not interfere between the employer and the engineer. The position of an engineer is quite different, and greatly superior to that of an architect in working out his plans. You will ask, how does this arise? I answer that the engineer is carrying on a work of science, that he is fully acquainted with all the methods of working out his designs, both of materials used and the mechanical agency employed for construction. He sees farther, he knows more, than the builder: he stands over him, gives him instructions, orders him what to do. The architect is carrying out a work of taste by methods, and in materials, as well, and perhaps better, understood by the builder than himself. If what I state were not true, how is it that I so constantly see a builder standing before some monstrous production, and saying, in the pride of his heart, and in gross darkness that he does not perceive, "I planned that out myself: we had no architect here." The fact is, the builder does not want an architect: he would rather meekly offer his own plans, and carry out his works without one. It answers his purpose better; and unfortunately the majority of employers entertain precisely the same opinion. I think Professor Kerr is wrong in supposing that the diffusion of knowledge on the subject of architecture is injurious to the professional interest; or that any good can arise from drawing a veil of mystery over a subject, when there is no secret to hide, and which from its interest, and I may say simplicity, will be studied and practised by amateurs, in spite of all he can say and do. In liberality of sentiment, in the diffusing of information, the architect's better "*half-brothers*" are in advance of the architects themselves. Look at the published works on engineering, and compare them with those on architecture!

To improve their present position, the architects must endeavour to raise the present standard of taste in the public mind: they must copy the engineers in being more determined, more scientific, and more united. Above all, they must teach contractors and builders their proper office, and be more independent of them. In my opinion, the way to succeed in that is to divide labour more; and instead of contracting with one man to undertake the construction of a building from beginning to end, they should divide their contracts, as sometimes they do now, letting different tradesmen perform the work, each in his own department of business.

With reference to the endeavour on the part of the architect to take the high hand with the engineer, dictating to him the design and ornamentation (which he despises) of his works, it would not succeed: the time has passed. Engineers will not put themselves into architectural harness, let Professor Kerr be assured. J. B.

ARCHITECTURAL PLAGIARISM.

You have lately had several paragraphs about copyright in design. Allow me, not merely for my own interests,—for these in this instance are small and secondary,—but for the sake of maintaining honesty in our profession, to call your attention to the following facts.

In 1852 and '53 I designed and superintended the erection of a large house for a gentleman at Nutfield, near Reigate, the cost of which was between 6,000*l.* and 7,000*l.*: subsequently it was sold to Mr. F. H. Gurney, and further works were done, in which an old pupil of mine, Mr. Pennington, and myself were jointly concerned.

At a later period some little additions were made by another architect, but not such as to modify in any material degree the main external composition; and yet he has twice exhibited the whole building as his design, once at the Great Exhibition of 1862, and now at the Architectural Exhibition.

To get up a pretentious picture of numerous

buildings, "designed and executed by," &c., is doubtless a very good way of advertising, and also a very easy thing to accomplish, if the adding of two or three rooms to a house, or the addition of a stage to a tower, or a few new windows to a church, justify the assumption of the whole edifice as one's production. But is this honourable?

R. M. PHIPSON.

WORKS IN THE REGENT'S PARK.

IT is now understood that gardens and pleasure-grounds should be in character with the buildings which they adjoin. As fine scenery is often marred by the badness of the building it surrounds, so many buildings are disfigured by inappropriate grounds. Nor is this the case only in the country. All large towns require spaces to be reserved, where the taste of the gardener may assist the work of the architect. Indeed, I look on the one as the complement of the other; and I should wish every architect to have the skill and the power to combine the different forms of vegetation with the building he designs. In England, where the climate is peculiarly suitable to the growth of trees, few now exist except in the large parks. In the continental cities they are not all cut down when the land is cleared for building purposes, and the principal streets are not deprived of the shelter and variety trees afford. We used to pride ourselves upon our parks. We were wont to ask if any other town possessed the shade and the verdure of the country in the neighbourhood of a city; but we must now submit to be defeated by our French neighbours, and be content to think that, if the Bois de Boulogne excel any other place for the beauty and skill with which it has been designed, this is owing to the experience the Emperor acquired in England. It is, indeed, remarkable for the judgment with which every natural advantage has been employed, and for the rapidity with which the work has been executed. I think, however, the reserved garden of the Tuileries presents to an English architect a more important example. A few years ago it was a space of dry gravel, with few flowers and no large shrubs. It is now a delightful garden, planned in harmony with the neighbouring palace, where borders of exotic flowers, massive screens of trees and shrubs, unite with marble vases, the orange tree and the pomegranate, to give the privacy the court required, and to recall the gardens Boccaccio described and Tasso sang.

In the Regent's Park an Italian garden has been lately made. It is well arranged, and skilfully laid out. If it is properly kept up,—a matter involving some expense,—it will be an excellent example for others to follow. But while Mr. Cowper deserves praise for the happy means he has taken to supply the loss of the trees he was forced to cut down, but little taste has been shown in the huge band-stand he has erected in another part of the Park. It is put where even a building of greater pretension to beauty would be out of place, for it interferes with and almost conceals a very picturesque distance, cutting the sky-line in a way that no good landscape-gardener would sanction. Had the spot chosen been the only one which would hold the large numbers that surround the stand on a Sunday, the case would be different; but there are other spots which present equal, if not greater, advantages. Were I allowed to suggest one, I would point out the piece of ground not far from the inner circle, where the policemen are drilled, as one in every respect suitable to the purpose.

By increasing the planting towards the angle of the paling, near the Eastern entrance to the Botanical Gardens, sufficient shade would soon be procured to shelter the performers. The audience would here have a large space at their disposal; the new gardens would be at hand; and the place is easily reached. The selection of this spot would also save many of the inhabitants of the Park from the annoyance to which they are subject.

The houses in the Regent's Park are principally occupied by professional men, to whom the rest of the one day is not a luxury, but a necessity. It is not possible for large numbers, however well behaved, to come together without materially interrupting that repose so dear on the Sunday to many Englishmen. If it is a prejudice to prefer this quiet to the bustle a continental town would present on this day, it is at least a prejudice which deserves to be respected, and not to be rudely or wantonly disturbed. Each year the Parks are more employed for purposes of amusement. The increased facility of communication will pour into them the inhabitants of distant quarters, whenever any unusual attraction is afforded. It is very important, then, that a competent staff should be selected for their care; that good taste should preside over their direction; and that, while the public wishes are considered, they should not be permitted to interfere with their order and arrangement. We have failed in most of our streets, and have a mother city as ugly as it is vast; but I trust it will be long before we shall be unable to point with pride to the public grounds, where the people seek their recreation.

A LOVER OF GARDENS.

CERTAIN POINTS THAT MIGHT BE CONSIDERED BY MODERN ARCHITECTS.

SIR,—It would appear to be most necessary at this time to consider certain prevalent faults in modern architecture and whence they arise; and this will give an answer to your recent pithy remark as to "Italian Gothic," or at least that which is so called.

Architects constantly fall into the error of designing eccentric buildings. This is easily mistaken for originality and fancy. The only antidote to this is simplicity and a strict adherence to use. The Japanese designs or patterns are never eccentric: they are natural: their humour or quaintness is always simple, and within the bounds of the possible.

Then, the desire, in the present day, for "sensation" effects, produces this eccentricity, against which it is the duty of all to strive manfully.

Again, the desire for showiness induces the architect to have recourse to the violent undercutting in carving; the coloured bricks; fussy, useless detail, and such-like trivialities; and hence the stuff called Italian Gothic. We want simplicity. This is the want of the age in architecture. "Sensation" is also the root of the widespread evil of making effect upon us Englishmen by building up strange forms copied from abroad. Italian Gothic is so common now that it has ceased to be a "sensation;" and we have French at this moment to keep time with Mr. Fechter, at the Lyceum. The translation of "Salaambo" may get up a Carthaginian "effect." The true object of an English architect should be to build something English in character, without being a literal copy of anything built before his time, although retaining the traditions of Old English work.

A building must bespeak its use: it must be suited to the surrounding landscape; and, if in the town, suited to the habits of the people, and to the purposes required of the building, with due regard to a picturesque effect and the material employed.

O. O. O.

LIABILITY IN THE ERECTION OF SCAFFOLDING.

Shea v. *Mahony*.—This was an action in the Sheriffs' Court (Mr. R. M. Kerr, Judge), to recover compensation for injuries received in falling from a scaffold; plaintiff being a plasterer's lad, and defendant a master plasterer. Mr. Juckes appeared for plaintiff, and Mr. Metcalfe for defendant.

It appeared that very recently some repairs were being executed in a house in Oxford-street, and a large room, with a very lofty ceiling, had to be replastered. A scaffolding was erected, and it was the plaintiff's duty to serve the workmen; in doing which he was compelled to use a scaffold gangway, from which one day he fell and severely injured himself. On the part of the plaintiff it was sworn that he had to serve the plasterers upon a single plank, and it was from a single plank that he fell.

In cross-examination plaintiff said,—I was not playing on the scaffold, nor do I know that any complaint was ever made of the mode in which the scaffold was erected.

James Mahony said,—I have been a scaffold-builder for twenty-five years, and have had great experience. The usual gangway for plasterers' boys consists of three, if not four, boards; and I have very rarely seen so few as three. If there was only one plank in this case, the scaffold was deficient, and it was wrong. I have given the plastering boys generally three boards, not more than 4 inches apart, to let the dirt through.

Cross-examined.—I have not seen this scaffold.

Mr. Metcalfe urged that defendant was clearly not liable, as he had merely contracted to put up the scaffold for the builder; and had, in fact, actually employed a third person to do it. There was a well-known case recently argued, in which it was decided that where a railway guard had been killed by reason of the negligence of a platelayer, the company was not liable.

His Honour.—Oh! I know that case; but there is a stronger one, in which some workmen kept on using a shaft after they themselves had complained of it.

Mr. Metcalfe.—In addition to the law, I can prove the fact that the boy was playing, and, walking backwards, fell off the scaffold. Therefore it was his own negligence which caused the accident. The person who erected the scaffold deposed that it was put up very securely, and the boy had at least three planks to work on.

One of the plasterers said,—I saw the accident, and I am bound to say that the boy was not playing on the scaffold. He had just served a workman, and stepped backwards, falling down upon a carpenter's bench, a depth of about 17 feet. I can explain how this happened. There were three boards for the boy to go upon, and one of these boards was very much longer than the other two, so that there were two short boards and one long board—in all three boards. Of course the shortness of the two boards made a gap in the scaffold, and the boy was upon the single plank when he stepped backwards. He was obliged to go so far to serve one of the plasterers, and he evidently forgot that there was a gap, having had the three boards for some distance on the gangway.

His Honour sent for the City bricklayer; and, after some conference with that tradesman, said,—"You see, Mr. Metcalfe, that there were three planks only for a portion of the gangway."

Mr. Metcalfe.—That scaffold was erected for Mr. Pritchard, the builder, and he supplied the timber.

His Honour.—But it was the duty of the person who put up the scaffold, and who ordered it to be put up, to reject boards which were not long enough. I can understand that where an accident occurs through the negligence and omission of a fellow-workman, the master would not be liable; but here the accident happens through the negligence of the master himself. I cannot say that to use short and long boards, so that a gap is left in the gangway of the scaffold, is not negligence; and therefore I find for the plaintiff, with 5*l.* damages, and full costs.

Mr. Metcalfe.—Can I appeal?

His Honour.—No. There is no appeal under 20*l.* Your client is clearly liable.

Verdict for plaintiff.

EXUDATIONS FROM WALLS.

SIR,—Will any of your readers be kind enough to inform me what remedy to apply, effectually, to the following grievance?

I have a large mansion which has undergone recent alterations and improvements. From some of the walls (which had been for some years exposed to the weather) there is an exudation on their surface of a brownish colour, very offensive to the eye. I have had them washed and painted two or three times, and yet this wretched thing makes its re-appearance.

Can it be the effect of wet getting into the walls and so oozing out?

If so, what remedy can I apply? Whether from this cause or any other, I shall feel greatly obliged to any one who can suggest a remedy.

A. A.

WORKS SELECTED BY PRIZEHOLDERS IN THE ART-UNION OF LONDON.

From the Royal Academy.—A Reconciliation, by F. B. Barwell, 210*l.*; A Scene in the Life of Kepler, J. Heapy, 200*l.*; The Enchanted Frog-Prince, Mrs. Bridell, 42*l.*; A Day Dream, E. J. Poynter, 42*l.*; The Pride of the Desert, A. Cooper, R.A., 25*l.*; A Study on the Coast, T. Walters, 15*l.* 15*s.*; On the East Hill, Hastings, J. Thorpe, 15*l.* 15*s.*; Windermere, from Low Wood, J. Walton, 15*l.*

From the Royal Scottish Academy.—Bournemouth, by E. T. Crawford, 25*l.*; Lochnagar, James Giles, R.S.A., 20*l.*; Village Musicians, H. Collins, 20*l.*; Study, Robert Gavin, 10*l.*

From the British Institution.—A Summer Ramble, by R. Collinson, 100*l.*; A Visit from the Parson's Daughter, W. H. Knight, 73*l.*; A Pastoral, W. Crabb, 50*l.*; The Tournament, C. Hunt, 40*l.*; The Thames at Sonning, H. Jutsum, 40*l.*; On the Swale, Yorkshire, G. Cole, 25*l.*; Fowey Castle, Cornwall, H. K. Taylor, 15*l.*

From the Society of British Artists.—Scene in Petersham, by J. Tennant, 12*l.*; Fern Gatherers, E. J. Cobbett, 110*l.*; At Ockham, Surrey, F. W. Hulme, 100*l.*; Summer on the Thames, W. W. Gosling, 75*l.*; Welsh Pasture View, S. R. Percy, 75*l.*; The Peat Gatherer, S. B. Godbold, 73*l.*; The Cornfield, W. Shayer, 50*l.*; Derwent Water, J. Walton, 42*l.*; Learning a Ballad, F. Underhill, 40*l.*; A Downholme Bridge, G. Cole, 35*l.*; Moonlight, A. Clint, 35*l.*; Shipping off the Casket, H. K. Taylor, 32*l.*; Cologne on the Rhine, J. B. Smith, 31*l.* 10*s.*; By the Seaside, J. Hangell, 25*l.*; The Morning Call, G. Pope, 25*l.*; Feeding, J. F. Herring, 25*l.*; Cathedral at Abbeville, T. J. Wood, 25*l.*; A Fisherman's Daughter, T. Lucas, 20*l.*; Village and Castle of St. Michel, H. Valter, 20*l.*; Dunstanborough Castle, H. K. Taylor, 20*l.*; Black Diamonds, J. T. Lucas, 17*l.* 2*s.*; Derwent Water, C. Pearson, 15*l.*; Anxious Moments, A. F. Rolfe, 15*l.*; On the Lledr, E. A. Pettitt, 15*l.*; A Picnic in the Woods, E. Temple, 15*l.*; The Lookout, P. R. Morris, 12*l.* 12*s.*; Fetch 'em in, H. Books Received.

The Law of Compensations, by Arbitration and by Jury. By CHAS. WORDSWORTH, Q.C. London: Shaw & Sons, Fetter-lane. 1863.

MR. WORDSWORTH having been called upon to sit as "assessor" to the sheriff in compensation cases, found it necessary to collect and collate cases, and make memoranda suggested by them. The result is this little book, which will be found serviceable by all who are engaged in such matters. It will probably form the nucleus of a bigger book, for much more might be said on the subject. The appendix comprises the "Lands Clauses Act," "Lands Clauses Amendment Act," the "Railways Clauses Act," and various "forms." Mr. Wordsworth thinks a subject as to costs requires farther legislative action. He says:—

"Under the statutory provisions, if a company make an offer to a claimant of a particular sum, which is not accepted; then, if the case is disposed of by arbitration or a jury, and the compensation awarded or assessed is greater than the sum previously offered, the company bear the claimant's as well as their own expenses. Ex-

aggerated claims are of common occurrence; and it is suggested that full justice might still be done to parties whose property is wanted for the particular works to be executed, if it were enacted that, unless they succeeded, by award or by verdict, in getting *two thirds* of the amount claimed, in cases where the company had offered a specific sum, they should not be entitled to costs."

But he rightly adds, "the subject is one that requires more to be said upon it than can conveniently be done in a 'preface.'"

VARIORUM.

"The Riots at Birmingham, July, 1791. Birmingham: Matthews, Bennet's-hill, 1863." This is a *facsimile* of a pamphlet (in English and French) published at the time of the riots occasioned by the celebration of the French Revolution. Property of the inhabitants to the extent of 400,000*l.* was destroyed; and together with the reprint are given *facsimiles* of a number of engravings of the ruins of mansions and other buildings that were destroyed. What has occasioned the issue of this reprint at the present time we do not know.——"Cassell's Illustrated Bunyan: The Pilgrim's Progress. London: Cassell, Petter, & Galpin. Number 1." This is a remarkable pennyworth; but we cannot find any trace in the prospectus of the total cost. It is to come out weekly; and the work will contain copious annotations by the Rev. R. Maguire, M.A., incumbent of Clerkenwell, and a Life of Bunyan by the Rev. W. Brock: the illustrations will be by Mr. H. C. Selous and M. Paolo Priolo.

Miscellanea.

THE THAMES EMBANKMENT (NORTH SIDE) BILL.—This Bill has been read a third time in the Commons, and passed.

ARTIFICIAL SLATE.—Mr. J. N. Pierce, of Darby, has exhibited at the Franklin Institute numerous specimens of artificial slate, for the use of schools, colleges, &c. On painting any suitable surface with a preparation patented by Mr. Pierce, a slate-coloured ground will be formed, which answers for drafting or marking purposes. Paper, linen, or any textile fabric, may be used to form convenient portable slates, which can be rolled or folded up for transportation. Mr. Pierce also exhibited pencils made of talc.

HOMES OF THE POOR AT READING.—An inquest was held before Mr. Rupert Clarke, on the 29th ult., on the body of Esther Pizzey, aged twenty-one years, wife of a laundryman, at the Wellington College. The deceased resided in a place consisting of a van, and a small compartment added to it, which formed a bed-room. She died rather suddenly. Great astonishment was expressed by the jury, says the local *Mercury*, at the smallness of the bed-room used by the unfortunate deceased, the dimensions being as follows:—length, 6 feet 2 inches; width, 6 feet 3 inches, but only 5 feet in the centre, as there was a projection of about 18 inches; height, 6 feet 1 inch. The door was 5 feet 4 inches high, by 1 foot 9 inches: the window was very small, and the occupiers of the place, fortunately so far for them, could not sleep with the door shut. The sitting-room was 10 feet 6 inches long, and 6 feet wide; the height being 5 feet 11 inches. Mr. Davis's assistant said a former occupier of the place had died there about two years since, from typhus fever. The occupier paid 2s. per week. The jury returned a verdict of "Disease of the heart."

DEATH OF DR. REID.—Dr. David Boswell Reid, well known by his labours in regard to ventilation, and who has been for some years in America, died at Washington on the 5th of April. The death was sudden, and caused by congestion of the lungs. Dr. Reid had been appointed, by the Federal Government, Medical Inspector to their Sanitary Commission; and he was about to leave Washington, to be employed in ventilating the new military hospitals which have been erected in different parts of the country. "Dr. Reid," says the *Scotsman*, "was a native of Edinburgh, grandson of the celebrated Hugo Arnot, the historian of Edinburgh; and was himself at one time an extensively-employed and successful teacher of chemistry here. His connexion with the ventilation of the Houses of Parliament is but too well known. He ventilated St. George's Hall, Liverpool—the only building in the world, he said, in which his principles of ventilation have been completely carried out. The ventilation of this building is considered very successful. Dr. Reid began his public career in Edinburgh as assistant to the late Dr. Hope, Professor of Chymistry in the University. He was also a candidate for the Chair when Dr. Hope resigned."

CRYSTAL PALACE.—The Annual Great Flower Show here will be held this Saturday, the 23rd instant, that day having been selected to meet the convenience of visitors to London for Epsom races. From the unusual forwardness of the season the show this year promises to be of surpassing beauty, particularly as regards the azaleas and other large and magnificent flowering plants, which the principal growers state are unusually fine this year.

PULPIT FOR LINCOLN CATHEDRAL.—Messrs. Ruddle, of Peterborough, are constructing a carved oak pulpit for Lincoln Cathedral, after designs furnished by Mr. Scott. The pulpit, hexagonal in form, will be about 25 feet in height, and will be surmounted by a canopy of a similar altitude. Figures of the four evangelists, we believe, will be grouped round the body of the pulpit, and the panels between are intended to be filled up with Scriptural subjects in bas-relief. The entire cost of the work will be about 500*l.* It is designed as a testimonial to the Rev. Edward Trollope.

EARTHQUAKE AT RHODES.—The *Levant Herald*, of the 30th April, publishes a telegram received from Smyrna, reporting the occurrence of a most disastrous earthquake at Rhodes, on the 22nd, resulting in the destruction of 2,000 houses, and a proportionate loss of human life. Not a single building in Rhodes or in the villages has escaped uninjured. The great tower of St. Michael gave way, and the little that was left threatened every minute to fall into the port and block up the entrance. The lighthouse tower is ruined, as well as the Palace of the Grand Masters, recently converted into a prison. The walls of the town are more or less damaged, besides all the churches. At Trianda only a dozen houses are left standing. Twelve other villages have been completely destroyed. There have been in all 300 persons killed, and an immense number wounded.

CHARTER HOUSE SCHOOL OF ART.—On Monday evening the Lecture Theatre at the South Kensington Museum was filled with an attentive company to witness the distribution of prizes gained by the students of St. Thomas Charterhouse School of Art. The Rev. W. Rogers, to whom the schools in this neighbourhood may be said to owe their origin, and Mr. Redgrave, R.A., were present, and took part in the proceedings. After some introductory remarks by Mr. Cole, who presided, and explanations by Mr. Redgrave relating to the manner in which the art examinations were conducted, Cardinal Wiseman delivered a discourse, wherein he praised to the highest degree the efforts of the working and poorer classes to attain proficiency in the arts; and showed how, in the case of Giotto the shepherd-boy, and others, genius fought its way against all impediments. Whilst giving the students every encouragement, the cardinal warned them against becoming self-sufficient and forgetful of the divine source from whence all talent and genius comes. The gainers of the two highest prizes were Miss Wherry, an engraver for watches, and a plasterer. A testimonial was also presented to the master, Mr. Clack, by the students.

VISIT OF CAMBRIDGE ARCHITECTURAL SOCIETY TO WISBECH.—The party arrived by train at noon, and as they were obliged to return by the five o'clock train, the time was only sufficient for a rapid glance at several churches. Several ladies graced the company. Immediately on their arrival the party proceeded to view the parish church, on which the Rev. Francis Joseph Braithwaite read a paper. From Wisbech they were conveyed to the rectory at Walsoken, where luncheon had been kindly provided by the Rev. J. Davis. They then went to view the church of All Saints, Walsoken. Mr. Davies read a paper on it. At Walton church, the Society was met by the Rev. E. E. Blencowe, who had arranged a number of engravings of different portions of the structure for the information of his friends: some of these were in sufficient number for each visitor to take away copies. The reverend gentleman directed their attention to the most interesting points of the building, and described them with much earnestness and good humour. The inspection of Walton church having been concluded, the party resumed their journey, which proved rather a long one, through Walton Fen ends, over a rough gravel road by Emneth station to Emneth church. On their arrival the time was found to be very limited, and a hasty glance was all that could be given. A short paper was read by the Rev. J. W. Berryman, vicar of the parish, on St. Edmund's, Emneth. The visitors were compelled to defer an intended visit to Elm.

THE INTERNATIONAL EXHIBITION.—It appears to be more than likely that the Government will purchase the building.

PROVIDENT INSTITUTION OF BUILDERS' FOREMEN AND CLERKS OF WORKS.—The anniversary dinner of this excellent institution will take place at the London Tavern, on Wednesday, June 3rd. Mr. A. J. B. Beresford Hope, F.G.S., will take the chair. We hope to see a full attendance both of members and of those influential friends who know the value of this institution.

EMPLOYMENT OF COTTON SPINNERS.—The town council of Stockport has followed the example of the corporation of Blackburn, and adopted a memorial to the Government, praying that steps may be taken for authorising loans, at a low rate of interest, to the local authorities in the cotton manufacturing districts, for the purpose of enabling them to carry out public works on which the operatives may be employed.

THE "PHOTOGENIC GAS."—In the *Oil Trade Review*, a supplement to the *Grocer* of 4th April, the editor says:—"Since witnessing the experiments at the company's office in Bishopsgate-street, we have had an opportunity of visiting some of the fourteen establishments in Paris, which are particularised by the promoters as being lighted with the photogenic gas, and find that although the proprietors of some of these places were induced to try the effect, they in a very short time abandoned the use of it." The smell seems especially to have been complained of, and also the cost: one house still used it as an improver of gas, but not from any saving in cost.

THE PROPOSED VIADUCT ACROSS LUDGATE-HILL.—The City petition against the defacement of Ludgate-hill by a railway bridge now bears more than a thousand signatures. That of the clergy within the civic boundaries constitutes a separate protest. It sets forth that the proposed viaduct will be a perpetual disgrace to, and a disfigurement of, the City of London, by the obstruction of the view of St. Paul's Cathedral, entirely destroying the architectural character of the approach to the west front of the cathedral, and so defacing the most picturesque street in the whole city. The opposition must not be relaxed.

MASTER AND WORKMAN.—At the Ashton county sessions a workman, named Flannaghan, summoned a sub-contractor named Jones for 8s., the balance of wages due to him for work done as a puddler at the Clayton Iron Works. Mr. Lord, solicitor, appeared for the defendant. It was admitted the wages claimed were correct, but it was pleaded that 3s. of the amount would not be due until Saturday, and that the defendant had forfeited 5s. according to the rules of the workshop. The rules were produced, and it was proved that they had been placed in a conspicuous position; but the defendant denied he knew anything about them. Mr. Lord was unable to prove that the defendant knew of the rules; and the chairman therefore decided that they were inadmissible as against him. Mr. Hugh Mason, on looking over the rules, said they were also void from want of mutuality, as they contained a clause that the workman must give certain days' notice to leave, but no clause binding the master to give a similar notice. These two points are of great importance, and it would be well if they were better understood by both employer and employed.

RAILWAY MATTERS.—At the Shrubhill Station, Worcester, in addition to the new up-train platform, with a bridge communication from the entrance to the station, in course of construction, various important works, with a view of giving increased accommodation and facilitating business, are in progress. A couple of grass fields, together about twenty acres, adjoining the railway to the east, have been levelled, and will be appropriated as an extension of the goods yard. Another large goods shed will be erected east of the present one. Cattle-pens are being constructed at the south-east end of the added area, and stables are being built at the east side. The present carpenters' shops will be cleared away, and new ones of a more permanent character erected on a site considerably to the south of their present position. Other improvements are in progress. All the works are being carried out under the direction of Mr. Wilson, the engineer to the company, and his staff.——A new economic permanent way, designed by Mr. G. F. Griffin, is attracting attention. The sleepers are made of corrugated cast-iron, and the cost per mile is stated at 1,245*l.* against 1,086*l.*; or 1,844*l.* under the existing systems. Messrs. Brassey, Betts, Trevethick, and others are said to have given favourable opinions of its qualities.

THE DUBLIN METROPOLITAN RAILWAY BILL.—This bill has been read a third time in the House of Lords, and passed.

QUEEN ELEANOR'S CROSS, NORTHAMPTON.—A correspondent complains of the dirty and defaced condition into which the municipality are allowing this interesting relic to fall.

HERBERT MEMORIAL.—An east window, in memory of the late Lord Herbert of Lea, from the design of Messrs. A. O'Connor, of London, has been put up in the parish church of Swallowcliffe, by the direction, and at the expense, of Lady Herbert, of Wilton House.

THE ALHAMBRA, IN LEICESTER-SQUARE.—A company is in course of formation for the purpose of purchasing the music-hall in Leicester-square, called the Royal Alhambra. The price paid for the lease, the buildings, and their entire contents, is 35,000*l.* in cash, and 10,000*l.* in fully paid-up shares. It is intended to give high-class musical entertainments. Mr. G. A. Macfarren is chairman of the directors, who invite applications for a capital of 100,000*l.*, in 20,000 shares of 5*l.* each; but, in the first instance, the issue is to be restricted to 10,000.

GAS EXPLOSIONS AT THE BRIGHTON PAVILION.—An alarming occurrence has taken place in the Royal Pavilion at Brighton. A large audience had assembled to listen to the performances of Christy's Minstrels. There was a strong escape of gas in the room, and a voice was heard from one side of the room calling that the escape was there. In a few seconds more the crack of a lucifer-match was heard, and a light was seen to be passed along the wall about seven or eight feet from the floor. A series of explosions followed, and all was confusion; but in a few minutes all were got out. Then men set to work and extinguished the flames, which jeopardised the entire building.

IPSWICH.—In compliment to a very active resident and town-councillor, Mr. Thomas S. Gowing;—who for many years has been usefully engaged in the management of the Ipswich Mechanics' Institution, and has mainly contributed to render it an exception to such institutions;—the members have subscribed 46*l.*, and presented him a silver tea and coffee service. This institution has at present no fewer than 665 members on the books, and an income of 315*l.* The hall of the building was lately much improved, chiefly through Mr. Gowing's instrumentality. At the presentation, Mr. R. Ransome was in the chair, and a great many of the members were present.

ST. MARTIN'S SCHOOL OF ART CONVERSAZIONE.—The seventh annual *conversazione* of this school has been held at the schools, Castle-street, Long-acre. The Rev. Mr. Humphrey, vicar of St. Martin's, was in the chair. Mr. Redgrave, R.A., said, as an examiner of the works, he must tell no secrets: yet he must say the works sent up by this school were of a much higher order than formerly; and he warmly congratulated the pupils upon their attainments. Out of nearly eighty pupils, forty-four have passed, twenty-six medals have been awarded, and seven prize studentships. Of the twenty-six works receiving medals, twelve have been selected by the examiners for national competition. After various speeches, the proceedings closed with a vote of thanks to the lady pupils for their artistic decoration of the schools for the occasion.

DEPARTURE OF NOTTINGHAM BUILDERS FOR NEW ZEALAND.—The run of prosperity which marked a new era in the building trades of Nottingham, after the operation of the Inclosure Act had opened the way for the expansion of the town in all directions, greatly increased the number of persons engaged in the various departments of the building trades. For several years all went on prosperously; and many steady journeymen worked their way into the position of masters. There has been a decline in the trade, however, during the past four or five years; and not a few Nottingham men and their families have gone to Australia and New Zealand. Mr. Ridgeway, one of the commissioners for granting land certificates to intending emigrants, has just been in Nottingham, according to the local *Guardian*, and has selected likely emigrants, and given them registration tickets entitling them to take possession of lots of land in Auckland and other districts. This month between 200 and 300 persons will leave Nottingham for the purpose of embarking for Auckland in the ship Tyburnia, which will leave the East India Docks, London, for Auckland, on the 28th instant. The emigrants include many men connected with the building trades.

GAS.—The Ipswich Gas Company have reduced their price from 4*s.* 6*d.* to 4*s.*——Eight hundred 10*l.* shares of the Reading Gas company have been recently sold by auction, and realized 10*l.* 5*s.* to 10*l.* 10*s.* per share. The new purchasers are promised 7 per cent.——The Burslem and Tunstall Gas Company have agreed to their usual dividends of 10 and 7 per cent. old and new shares, free of income-tax.

WOOD PAPER.—The *Boston* (U.S.) *Courier* is now printed on paper made from wood fibre, according to the *Paper Trade Review*. The paper, it is said, has a very good appearance. In making this novel article a beam of timber is put into a strong cylinder, into which steam is forced at a high pressure. The power of the steam disintegrates the wood into mere threads; and so completely is this done that the dismemberment of a log of wood into riband-like filaments appears the work of magic. The fibrous filaments are easily made into paper.

PRESENTATION TO A MASTER.—At a dinner at the Rosemary Branch Tavern, last week, when nearly a hundred guests, mostly employed by Mr. Porter, builder, of Sherborne-street, Islington, were present, a massive silver cup, subscribed for by his workmen, was presented to Mr. Porter, in acknowledgment of his endeavours to promote their welfare. It was accompanied with an appropriate address, engrossed on vellum, and signed by the Committee:—"Joseph Porritt, Benj Thos. Alvarz, George Messenger, William Woolley, Alexander J. Connon."

IMPROVEMENTS IN ELECTRO-METALLURGY.—Mr. A. Dalrymple, of Sheffield, has provisionally specified an invention by which he says he is enabled to produce ornamental patterns, or other devices, upon metal surfaces by depositing one or more different metals in such a manner that these different metals are either inlaid in the metal surfaces, or in relief upon the same. He cuts out the pattern of the ornament in parchment, or other suitable material, and gums it upon the surface to be acted upon: he then covers all the other portions with a suitable non conducting varnish, or composition, and afterwards removes the parchment pattern; thus leaving the parts to be ornamented quite free of the varnish or composition; or he covers the surface entirely with a non-conducting varnish or composition, and then chases the pattern of the ornament through the same. The metal prepared by either of these processes is then "eaten out," forming a "bed" of any required depth. The article is then placed in an ordinary depositing bath with battery action containing the proper solution of the metal to be deposited.

TENDERS.

For a new wing to the City of London Hospital for Diseases of the Chest Victoria Park. Mr. William Beck, architect. Quantities by Messrs. Welch and Atkinson:—

Mansfield & Sons	£7497 0 0
Ashby & Horner	7350 0 0
Ashby & Sons	7200 0 0
Conder	6959 0 0
Lawrence & Son	6957 0 0
Brass	6947 0 0
Myers & Son	6887 0 0
Browne & Robinson	6474 0 0

For house at Forest-hill. Mr. Sextus Dyball, architect:—

Kent	£1294 0 0
Simmons	1185 0 0
Marshall	1164 0 0
Glover & Thompson	996 0 0
Bond	945 0 0

For repairs &c., to Watermen's Almshouses, Penge. Messrs. Porters & Markham, architects:—

Maeers	£1192 0 0
Warner	1119 0 0
Smith	1005 0 0
Little	931 0 0
Wells	870 0 0
Hollins	845 0 0
Simms	788 0 0
Hart	767 0 0
Wills	765 0 0
Peake	750 0 0

For a pair of semi-detached villas, at Croydon. Mr. James Tolley, architect:—

Richardson	£1610 0 0
Ennor	1583 0 0
Watts	1571 0 0
Grover	1399 0 0
Rowand	1145 0 0

For alterations and additions to premises 93 to 95, City-road, for Messrs. R. Hovendon & Sons. Messrs. Hovendon & Heath, architects:—

Conder	£2484 0 0
Prichard	2386 0 0
Axford	2365 0 0
Perry	2287 0 0
Henshaw	2074 0 0

For fitting up the London, Birmingham, and South Staffordshire Bank, 110, Cheapside. Mr. J. F. Earle, architect:—

Henshaw (accepted)	£1500 0 0

For warehouse at Leman-street, Whitechapel. Mr. R. Beeston, architect:—

Rivett	£1496 0 0

For the fifth portion of villa residences for the Temperance Permanent Land and Building Society, on their estate at Stratford:—

Rivett	£2385 0 0

For a house at Potter's Bar, for Mr. Roger Fenton. Mr. George Truefitt, architect:—

Patrick (accepted)	£1833 0 0

For new house and stables, &c., for Mr. H. K. Hebb, Lincoln. Mr. M. Drury, architect:—

Kirk	£1849 0 0
Ward	1708 0 0
Huddleston	1698 0 0
Young (accepted)	1579 0 0

The above are exclusive of a large quantity of available materials in existing buildings.

For house at Old Ford. Messrs. Searle, Son, & Yelf, architects:—

Howlett & Brown	£638 0 0
Turner & Sons	557 0 0
Robbins	537 10 0

For house at Eastbourne, for Rev. A. Foyster. Searle, Son, and Yelf, architects:—

Peerless (accepted)	£800 0 0

For a Baptist Chapel at Canterbury. Searle, Son, & Yelf, architects:—

Terry	£2138 0 0
Lancefield	2091 10 0
Cozens Brothers	2084 0 0
Shrubsole	2005 0 0
Gaskin & Godden	1731 0 0
Wilson (accepted)	1650 0 0

For house at Eastbourne, for Mr. J. C. Coles. Searle, Son, & Yelf, architects:—

Peerless (accepted)	£2100 0 0

For first portion of Free English Church, Hackney. Searle, Son, & Yelf, architects:—

Holland & Hannen	£3970 0 0

For foundation-work to premises, New Southwark-street, for Mr. J. Davenport. Searle, Son, & Yelf, architects:—

Higgs	£550 0 0
Dove Brothers	550 0 0
Clemence	539 0 0
Colls & Co.	489 0 0
Sands	478 0 0
Downs	469 0 0
Hill & Co.	459 0 0
Coleman	453 0 0
Rider	438 0 0
Turner & Sons	425 0 0

For foundation-work to premises, New Southwark-street, for Mr. S. Mart. Searle, Son, & Yelf, architects:—

Downs	£1163 0 0
Dove Brothers	975 0 0
Clemence	969 0 0
Sands	916 0 0
Higgs	903 0 0
Hill & Co.	887 0 0

☞ *NOTICE.—All Communications respecting Advertisements, Subscriptions, &c., should be addressed to "The Publisher of the Builder," No. 1, York-street, Covent Garden. All other Communications should be addressed to the "Editor," and* NOT *to the "Publisher."*

THE "*Illustrated London News*" of November 8th, when describing Benson's Great Clock, says, "The movement of this clock, next to that of Westminster, is the largest in the world, and in point of quality of material, and finish of workmanship, it is unequalled by any known." Benson's new show-rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bed-room, library, hall, staircase, bracket, carriage, church, turret, railways, warehouse, counting-house, with musical, astronomical, and every description of clock, from the plainest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock.—J. W. Benson received a Prize Medal and honourable mention.—33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

TO AMATEURS, ENGINEERS, TURNERS, and OTHERS.—The valuable Lathes and interesting Effects of the late John Taylor, Esq., F.R.S.

MR. FREDERICK A. MULLETT will SELL by AUCTION, at 31, CHESTER-TERRACE Regent's-park, on WEDNESDAY, the 27th inst. at TWELVE, a ROSE ENGINE, of the most elaborate construction, by Holtzapffel & Co.; an iron-bedded lathe, with 3-inch centre, with hexagonal boxwood chucks; a carving and planing machine; a drilling ditto; a large quantity of engineering and other tools; about 5 cwt. of hardwood benches; lots of drawers; mahogany cases, &c.—May be viewed two days prior; and catalogues had on the premises, and at the Auctioneer's Offices, Albion-place Hyde Park-square, W.

TO ARCHITECTS, BUILDERS, &c.

JOHN DAWSON & SON will SELL by AUCTION, on the PREMISES, "The Kirk," Kensal-Lane, on WEDNESDAY, 27th MAY, and following day, at ELEVEN o'clock each day, ANCIENT CARVING in OAK Gothic doors, mullions, screens, and the linen panelling, and also the entire pews, seats, pulpit, lectern, and other fittings of Messrs. Pugin and Hardman's church in stone and wainscot plaster. These fittings are among the materials having been destroyed.—Catalogues may be had at JOHN DAWSON & SON'S Land and Auction Offices, Marlborough Chambers, 44, Pall-mall.

REIGATE.—Important and valuable FREEHOLD BUILDING LAND, situate near the London and Brighton Turnpike-road, on the south side of the town, being the remaining portion of the Cockshot hill Estate.

MESSRS. NASH are instructed by the Devisees in Trust of the late John Dixon, Esq. to SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, London, on THURSDAY, the 11th day of JUNE, 1863, at TWELVE for ONE o'clock, about eight acres of valuable and highly attractive FREEHOLD BUILDING LAND, comprising the remaining portion of the Cock hot hill Estate, having capital frontages to the south part and to the new road connected therewith. It is elevated, being on the sand ridge, commands fine views, and is eminently adapted for the erection of first class residences; also a FREEHOLD RESIDENCE, facing the turnpike-road (let on lease at the moderate rent of 110*l* per annum), containing dining and drawing rooms, six bedrooms, and dressing-rooms, attic, and convenient offices; detached coach-house, two stall stable, &c.; well-kept lawns and pleasure-garden, and productive kitchen garden. The above estate is delightfully situate, and presents great attractions, being in a locality proverbially healthy, and the views of the surrounding scenery extensive and magnificent. It is within a convenient distance of several churches, and the proximity of the South Eastern, Reading, and Brighton lines of Railway, within an hour's ride of the City and West End, the increasing demand for land eligible for good residence, enhance these attractions to capitalists either for residences or first-class investments.—Part values of sale may be had at the principal inns in the neighbouring towns, at GARRAWAY'S, Change-alley, E.C.; of Messrs. MAPLES, MAPLES, & PEARSE, Solicitors, 8, Frederick-place, Old Jewry, E.C.; of Messrs. CLUTTON, Surveyors, 9, Whitehall-place, S.W.; and of Messrs. NASH, Land Agents, Valuers, and Auctioneers, Reigate, Surrey.

Land for Manufactories (chemical or other), with good access by land and water, TO BE SOLD.

MR. JOHN WALLEN has received instructions to SELL, in large or small pots, about 9 acres of FREEHOLD LAND, abutting on Barking Creek (navigable for vessels of 200 tons), with workmen's mess near, and within half a mile of the railway station. For particulars apply to Mr. JOHN WALLEN, 68, Old Broad-street, E.C.

ELIGIBLE OPPORTUNITY FOR BUILDING.—BISHOP'S WALTHAM, HANTS.

MR. R. AUSTIN is favoured with instructions to SELL by PUBLIC AUCTION, at an early date, the LEASES of many very Valuable BUILDING SITES, with frontages to the Winchester and Portsmouth main turnpike roads, and near the improving town of Bishop's Waltham (which has long been noted for its healthiness) close to the Railway Station and overlooking at a general sheet of water at the picturesque Old palace ruins, having extensive and commanding views over a hill and dale and well-wooded country within about 30 minutes' distance of Portsmouth, Southampton, and Winchester, and about 12 hours of the Metropolis. The BISHOP'S WALTHAM CLAY WORKS and Messrs. BLANCHARD'S TERRA COTTA FACTORY employing many highly productive, together with the Railway and important works of improvement now in progress at Bishop's Waltham, make these Sites very desirable for building purposes. The Public are informed that they would not now have the opportunity by sale of these most eligible Building Sites but for the recent enfranchisement of the land.—Plans to be seen on and after FRIDAY, the 29th day of MAY, at the offices of the Auctioneer, 20, Fort and Street, Bishop's-walham, and Bishop's Waltham, of whom particulars are to be obtained.

HORNSEY.—Middle-st Freehold Land Society.—Near to the Woodgreen Railway Station. The last portion of valuable Freehold Building Ground, presenting a good opportunity for investment of capital in creating fresh ground rents.

MR. BRAY, Junr., is favoured with instructions to SELL by AUCTION, at the MART, on THURSDAY, MAY 28th, at TWELVE, in six lots, by order of the Mortgagees, a VALUABLE ESTATE, being a part of the Lordship Lodge Estate, in Lordship-lane, and contiguous to the Wood-green Railway station, having 1,850 feet of building frontages to Arnold-road, Wilkinson-road and Lord Hay's-lane, and presenting sites thoroughly favoured locally for the erection of detached or semi-detached villas. The roads and sewers have been made at considerable expense.—Particulars and conditions of sale may be had of Messrs. ROY & CARTWRIGHT, Solicitors, 4, Lothbury, E.C.; of Messrs. FORD & LLOYD, 4, Bloomsbury-square, W.C.; JOSEPH IVIMEY, Esq., Solicitor, No. 8, Staples Inn, W.C.; at the Nag's Head and Jolly Butchers, Wood-green; the Ship, Tottenham; the Angel, Edmonton; and at the Offices of the Auctioneer, 159, Kingsland, Middlesex, N.E.

TO BRICKMAKERS, ENGINEERS, MANURE MERCHANTS AND MANUFACTURERS, GARDENERS AND OTHERS.

MESSRS. EDWIN FOX & BOUSFIELD will SELL by AUCTION, at the BRICK FIELD, Devon's-lane, Bow-common, on TUESDAY, JUNE 2nd, 1863, at TWELVE for ONE o'clock, the BRICK PLANT: comprising 10 horse power Bright steam engine and boiler (25 feet flange and 5 ft. 6 in. shell, with 6 inch cylinder, 4 ft. 1 in. stroke complete, pug mill, 2 dublin carts, crowling, sawyer, and off-bearing barrows, 9 cwt. wheeling plates, quantity of shutes, handles, and the usual appliances of the trade; also 3 tons of Blood Manure (made up), about 50 tons of ditto (absolute), 1 ton of salt, 2 tons of nitre, 1 ton of sugar scum, 14 cwt. of Epsom salts, about 200 loads of peat, and an immense quantity of breeze; quantity of metal in work, several large tanks, a patent weighing machine, and numerous others.—May be viewed the day prior and morning of sale, and Catalogues had of Mr. C. WILSON, White Swan, Devon's-lane, Bow-common; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, Bank, E.C.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of about 200 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton-road), in the following Marbles, viz.:—Statuary, Sienne Royal, Black and Gold, Black, Sienna, Bardilla, Dove, Californian, St. Ann's, Rouge Jasper, Jeune Fleure, Bracatella, Genoa Green, Irish Green, Blue Belge, Emperor's Red, Irish Fossil, Campaine Melange, Vein, Sicilian, and various excellent specimens of British Marbles, varying in price from 1*l* 10*s.* to 50*l.*; and for elegancy of design, workmanship, and quality, not to be surpassed in England. Purchasers to the extent of 30*l.* and 50*l.* approved bills of three and four months will be taken, less 25 per cent. cash. Purchasers from the country will be supplied with packing cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

MR. G. NEWENHAM (Pupil of G. G. Scott, Esq. R.A.) PREPARES Sets of Competition Designs, Working and every description of Architectural and Artistic Drawings. Perspectives Outlined in a superior manner (and coloured by the best artists), with punctuality and despatch, and on reasonable terms.—Offices, 21, Parliament-street, Westminster, S.W.

HEAD OFFICE, 64, CORNHILL, LONDON, E.C.
WILLIAM J. VIAN, Secretary.
Railway Passengers' Assurance Company, empowered by Special Act of Parliament, 1849.

LONDON and SUBURBAN LAND and BUILDING COMPANY, LIMITED Incorporated under "The Companies Act, 1862"—Offices, No. 70, Fenchurch-street, City, E.C. Capital, 50,000l in 5000 shares of 10l each, power to increase, in 5,000 shares of 10l. each. Deposit 2l per share, of which 1l. is to be paid on application and 1l on allotment. No call to exceed 10s. per share, nor to be made at less intervals than two months between each, until the sum of 5l. per share is paid up, beyond which no further calls contemplated.

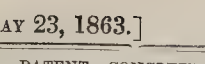
ABRIDGED PROSPECTUS.

The objects of the Company are The purchase and sale of freehold and leasehold lands and hereditaments in England, the purchase, enfranchisement, and sale of copyholds; the erection of dwelling-houses and other buildings; the purchase of reversions; the improvement of property by drainage and laying out, and making thereon roads, gardens, squares, ornamental grounds, or otherwise, the exchanging, letting, leasing of property, the advancement of moneys at interest on freehold, copyhold, and leasehold securities; the borrowing and taking up of moneys at interest; the carrying on the business of a Land, Building, Advance, and Investment Company in all its branches and departments; and generally to do all such other things as are incidental or conducive to the attainment of all or any of the above objects.

The Company is an embodiment and extension of the London and Suburban Freehold Land Society, which has been in active and successful operation for upwards of eleven years, and which for the last nine years has paid a dividend of 7½ per cent

This Company has, however, in view a wider field of action, as may be collected from the summary of its objects, which is above given

The Board of Directors is composed chiefly of gentlemen who have for many years taken an active and prominent part in the management of the London and Suburban Freehold Land Society, the majority of them the same as in that direction



The Company begins its career free and unembarrassed, inasmuch as, excepting the usual costs of the preparation of the articles of association and the registration of the Company, "preliminary expenses,"—which words often signify the payment of large sums of the amount of paid up shares to promoters, &c.—are to them strangers.

The Members of the Land Society have already subscribed for a large number of shares; the remainder will only be allotted at a premium of 2s 6d per share, and no application for shares at that premium will be entertained after the 8th proximo.

Prospectuses with form of application for shares may be obtained at the Offices, or by post on the applicant including a postage-stamp to the Secretary, Mr. JONATHAN TAYLOR.

THE PATENT CONCRETE STONE COMPANY (Limited).—Temporary Offices, 38, Parliament-street, Westminster.—At a Meeting of the Board of Directors, held here this day, it was resolved: "That applications for the remaining shares in this Company must be made to the Brokers, Messrs. BARRY & CO Birchin-lane, E.C. before the 1st day of JUNE next, on which day the share-list will be closed."
May 1, 1863. THOMAS PIPER, Secretary.

STANLEY'S IMPROVED DRAWING PEN

TO BE DISPOSED OF, an old-established JOBBING BUILDER and DECORATOR'S BUSINESS, under very advantageous circumstances, and on very moderate terms. Sole factory reasons given for the disposal.—Apply to T. S. 12, Emmis-terrace, Graft n-road, Camden Town, N.

TO PLUMBERS and HOUSE DECORATORS.—TO BE DISPOSED OF, an OLD-ESTABLISHED BUSINESS, in the above line, [illegible] situated in the high road of a rapidly increasing neighbourhood, about four miles from London, the present proprietor leaving the business.—Address, A. Z. Mr FOSTER, Bookseller, High-street, Peckham, S.E.

TO BUILDERS, SEWER CONTRACTORS, and OTHERS.—TO BE SOLD, by Private Contract, the SURPLUS STOCK of the late John Ley, comprising deals, planks, palingboards, dye squares, struts, street standards, box horses, troughs moulds, centres, well tackle and buckets complete.—Apply to Mr COLVERD, No. 1, Surrey-grove, Old Kent road, S.E.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate-streets.—This valuable FREEHOLD ESTATE (land-tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, and can be dug on the estate, is expressly proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snare-brook Station is about a mile and a half on a line of eighty-one, in Six Acres of Building Ground in Penzance, will be sold in lots by auction at the same time. The whole of this ground is at present under cultivation as market garden ground for early broccoli and early potato crops.—For particulars apply to TODD & CORNISH, 8 Hectors, Penzance
Penzance, April 23rd, 1863.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE SET, on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

BUILDING LAND TO BE LET, HACKNEY, close to the Railway Station, for small Dwelling Houses.
NORWOOD, close to the Crystal Palace, for Shops and Villas PERRY-HILL, SYDENHAM, for Shops Advances in each case if required.—Apply to Mr. T. K. GREEN, 25, College-hill, Cannon-street, E.C.

VALUABLE BUILDING PLOTS, near ORDNANCE TERRACE, CHATHAM.—The Trustees of Watt's Charity, at Rochester, are desirous of receiving TENDERS for Fourteen Plots of BUILDING LAND, at or near Ordnance-terrace, in the parish of Chatham, Kent, TO BE LET (with immediate possession) on Lease, for the term of 99 years from Christmas next, 1863. The Tithe rent charge and Land-tax are redeemed. The Estate is most eligibly and delightfully situate on the elevated ground between Ordnance-terrace and Fort Pitt, and commands extensive views of the River Medway, Dockyard, &c.; is adjacent to the Chatham Station of the London, Chatham, and Dover Railway, and is eminently adapted for the erection of Dwelling-houses and Villas of a superior description. TENDERS are to be sent in on or before SATURDAY, the 6th day of JUNE next, to the Office of Messrs. LEWIS & MARSH, solicitors, Rochester, where also a Plan of the Estate and a model draft Lease are deposited, and open for inspection previous and up to the day of Tender.—For further particulars of the several Plots, and conditions as to the Buildings and Lease, see printed particulars and conditions which will be issued 21 days prior to the day of Tender, and may be had of Mr MARTIN BULMER, the Trustees' Surveyor, Maidstone and Strood; of Messrs HARRISON & LEWIS, 26, Old Jewry, London, E.C.; of Mr. WILLIAM HAYMEN (the Receiver of the Charity Estates); at the principal Hotels in Rochester and Chatham; and of Messrs. LEWIS & MARSH, Rochester.

CITY of LONDON.—BARBERS' HALL. TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell street, Wood street, and a portion of the Court yard Hall and Offices in the rear.—For particulars and plans, apply to the BEADLE at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford court, Throgmorton-street, E.C.

TO ARCHITECTS, BUILDERS, and OTHERS.—TO BE LET, on Building Leases, at low ground rents, about 50 acres of most eligible BUILDING LAND, immediately adjoining the Caney Hatch Station, on the Great Northern Railway. Gravelly soil and good water. There is a great demand for villa residences in this neighbourhood. The connecting of the Great Northern Line with the Metropolitan Railway, brings this property within half an hour's ride of the City or West End.—Apply to Mr S. BARKER BOOTH, Solicitor, 4, Gray's-inn-square.

LAND TO BE LET, for the Erection of a Pair of Villas, on a high road, with sewer, gas, and water mains, six miles from town, Surrey side, moderate ground rent, and 700l. to be advanced at five per cent. The foundations supply sufficient sand and gravel.—For particulars apply to A. O. care of J. P. Harvey, [illegible] 2, Tavistock street, Covent-garden, W.C.

SOUTHAMPTON.—To BRICK, TILE, and CEMENT MANUFACTURERS, and OTHERS, requiring extensive WATERSIDE PREMISES TO BE LET, with immediate possession, for an unexpired term of twenty years, an extensive and important PROPERTY, occupying an area of about twenty acres, situate at Eling, on the banks of the Southampton river, with spacious wharf and river frontage, accessible by vessels of large tonnage, together with numerous buildings, consisting of most substantial MILL HOUSE, four stories high, with engine and boiler; sheds, and chimney shaft of 110 feet; also the erections of brick kilns on a large scale, with cottages for foremen and workmen. The land has an inexhaustible supply of brick earth, and the premises are convertible for many manufacturing purposes.—For further particulars, apply to Mr. H. WITHERS, Land Agent, Redbridge, near Southampton.

BUILDING LAND TO BE LET, at Canonbury (Marquess-road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Croydon, &c. Also, at Edward's road, Bow, some carcases for completion. The usual advances of money to respectable parties. Apply at the Offices of Mr J. EDMESTON, Architect and Surveyor, 3, Crown-court, Old Broad street, E.C.

GROUND RENTS.—WANTED to PURCHASE, about 1750l. PER ANNUM in FREEHOLD GROUND RENTS, well secured on a good class of London house property. Full particulars and terms to be sent to Messrs DANIEL SMITH, SON, and OAKLEY, 16, Waterloo place, Pall-mall, S.W.

BUILDING LAND in FLEET STREET TO BE LET, about 48 feet frontage, and 88 feet deep.—For terms apply to J. JOHNSON, Esq. 9, John-street, Adelphi; or to Mr JAMES ARDING, 62, Bread-street, Fleet-street; or Messrs. BUSHWORTH, JARVIS, & ABBOTT, Saville row, Regent-street, and 19, Change-alley, Cornhill

MR. HILL has TO LET SEVENTY-SIX ACRES of LAND for building purposes, suitable for the erection of a number of villas, about three miles from a station on the South Eastern Railway, less than 20 miles from London. Advances if required. Apply at 14, Bedford row, London

BUILDING LAND, for the erection of a corner public-house, shops and houses, within five minutes' walk of Clapham-road and Nine Elms Boat Pier. Rail, and boat to City. Roads and sewers made. Good sand and gravel. Advances if required. Houses let before finished.—H. BATES, Priory, Wandsworth road.

A LARGE FIRST-FLOOR TO LET, suitable for a Builder, Printer, or Bookbinder, newly built. Gas laid on. Dimensions, 60 feet by 30 feet.—Inquire of OWEN McCARTHY, Whitefriars, E.C.

CHARING CROSS TERMINUS.—Villiers street and Buckingham-street.—TO BE LET, on building lease, for seventy years, extensive PREMISES, 43 feet frontage to one street, and 21 feet to the other; depth, 110 feet; area about 3800 feet; or would be let separately.—Apply to A. SMITH, Esq. Architect and Surveyor, 11, Buckingham street, Adelphi, W.C.

BUILDING LAND or DILAPIDATED PROPERTY WANTED, near to Farringdon street, about 1,500 square yards in area, with a frontage to the north of about 120 feet, suitable for erection of a lofty factory.—Full particulars to be addressed to Messrs ARDING & BOND, Surveyors, 23, Hertford, W.C.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament.
The drawdock has been closed for some years, and is now about to be re-opened.
From its excellent situation and the probability of the Scotland-yard Wharf being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.
A residence is attached, which may or may not be taken with the wharf or drawdock.
Apply to Mr W. HEWETT, 84, York-road, Lambeth.

SITE for BUILDING PORTMAN BARRACKS.—The SITE for these BARRACKS, with several houses adjacent thereto, is proposed TO BE LET, on a BUILDING LEASE, or LEASES, for a term of ninety years, from Michaelmas, 1863. A plan of the same may be seen, and further particulars ascertained, at Mr. HARDWICK'S Office, No. 1, Hendrick-street, Cavendish-square, any day between the hours of TEN and FOUR o'clock.—Proposals for taking the property are to be left at Mr. HARDWICK'S Office, sealed up and indorsed, "Proposal for the Site of the Portman Barracks," &c. on or before the 24th day of JUNE next.

BUILDING LAND.—FREEHOLD BUILDING LAND TO BE SOLD, eight plots, situate within five minutes' walk of Bow Railway station, and near Victoria Park, part of the London and Suburban Freehold Land Society's Estate. Price, 400l. Part of the money can remain on mortgage.—Apply, 89, Blackfriars road.

ALDBURGH, SUFFOLK.—Building Sites TO BE LET or SOLD in this rising and fashionable watering-place. The sites are on high ground and command most extensive views of the German Ocean. Plans and Elevations of the houses proposed to be erected may be seen, and application to Mr ELKINGTON, Architect, 19, Cannon street West, E.C.

TO BUILDERS and OTHERS.—Notice is hereby given that the Trustees of the Rev. Dr. Spurlow's Charity Estate at Hackney have several PLOTS of LAND TO LET to build on, eligible for villas and other respectable private dwellings. The land will be let free from the freeholder, and free of land tax and [illegible] communication paid charge. The above estate offers an excellent opportunity to persons desirous of building houses to reside in themselves.—For further particulars inquire of Mr. GUILDEN Surveyor, No. 2, Old Church-yard, Hackney; or of Mr. C. H. PULLEY, of Upper Homer th, and 23, Great Winchester street, Old Broad-street, City, Solicitor.

FREEHOLD.—To BUILDERS, CONTRACTORS, MERCHANTS, and OTHERS.—17 feet frontage by 255 feet deep of FREEHOLD LAND, land tax redeemed and a Vote for the County for 20l. It is situated 11 miles from London, half a mile from Station, on an eminence commanding views above 20 miles round. Goods or Building Materials taken as Cash.—W. A. GALE, Esq. Carshalton, Surrey.

POLYTECHNIC.—WHITSUN HOLIDAYS.—All the Lectures and Entertainments as delivered, before their Royal Highnesses the Prince and Princess of Wales the Prince and Princess of Hesse. Professor Pepper's Ghost Lecture Saturday at 4 and 8, and every other day at half-past 1 and 8. Von Weber's Grand Opera of "Der Freischutz." Engagement of Herr Susman for his remarkable imitations of birds and other animals. Entirely new series of Dissolving Views of Poland and the Poles, with Lecture by J. Millard, Esq. describing the Rights and Wrongs of that Country. Pneumatic Wonders by J. L. King, Esq. Conjuring made easy by Mr James Matthews. Altogether the most liberal shilling's-worth in London.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and otcer CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement

MEAD'S PATENT PREPARATIONS.—NOTICE.—BUILDERS and DECORATORS will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, wainscot, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling-houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; and at the Works, Albridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

KENT'S PAINTING BRUSHES
are all stamped G. B. KENT & CO

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

HALKIN HYDRAULIC LIME, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, N.W., the same as used in the construction of the Liverpool Docks, &c and so long celebrated for its strong cementitious and connecting powers for subaqueous masonry, can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground and in bags and barrels. The Limestone can be had in full cargoes; also L. J. & Co.'s Roman Cement, in barrels, which is of a very superior quality, and warranted pure. Orders to be accompanied by a banker's reference.—Apply to the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool

Shipments on the shortest notice.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving the following extract FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE OF WIGHT—Second Testimonial:—"March 10th, 1852.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now seven years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's  Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at which a great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for cover ng Boilers, &c is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works were the above roofing is made are F. McNEILL & CO'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet, also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade

1851.  1862.

Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.

Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

LITTLE CASTERTON FREESTONE.

Apply for prices, &c. to

OCTAVIUS N. SIMPSON, STAMFORD;

and see Specimens at the Office of

Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.

BELLMAN & IVEY,

London House, Mr. THOMAS BEGGS.

ERKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, also dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High Pressure Single and Double Loose Valve and Screw Down Cocks; Improved self-acting and Pull Water-Closet; Patent Atmospheric Water Preventer; Plumbers' and Gasfitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern valves, cranks, or wires are used. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application at the Manufacturers, J. TYLOR & SONS, Warwick Lane, Newgate street, London.

TERRA COTTA and Fine STONEWARE

POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stone, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10 Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Cornices, Pediments, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

BRENTFORD GRAIN DISTILLERY.—TO BUILDERS AND OTHERS.

MESSRS. FULLER & HORSEY will SELL by AUCTION, pursuant to an Order of the Court of Chancery, made in the causes of "Booth v Coulton," "Booth v. Booth," and "Booth v. Nash," with the approbation of his Honour Vice Chancellor Stuart, the Judge to whom these causes are attached, at the AUCTION MART, in the city of London, on THURSDAY, the 28th day of MAY, 1863, at TWELVE o'clock, in Four Lots, the highly important FREEHOLD and COPYHOLD ESTATE, recently carried on as a Grain Distillery, comprising the buildings, the back room, the brew house, the malt dwelling house, offices, yards, garden, and staithing, and a landing wharf in the Thames, situate at Brentford, about seven miles from London, on the western road, and about midway between the Kew and Brentford stations of the South Western Railway. It is contiguous to the New Station of the North London Railway, and also to the docks and wharves at Brentford; the whole forming a most desirable property for any large manufacturing establishment, or a most eligible site for building operations. To be viewed till the Sale by cards only, which, with printed particulars, plans, and conditions, may be had of Mr. P. B. HOOK, Esq. Solicitor, 6, Lincoln's-inn-fields, W.C.; of W. H. DAVIS, Esq. Solicitor, 16, Golden square; of Messrs. KINGSFORD & DORMAN, Solicitors, Essex street, Strand; of Messrs. CLARK & RUSTON Solicitors, Brentford: and of Messrs. FULLER & HORSEY, Billiter-street, London, E.C.

Pair of Steam Engines, equal to 50-horse power nominal.

MESSRS. FULLER & HORSEY are instructed by the Directors of the London Armoury Company Limited, who are removing to the new Works to SELL by AUCTION, on THURSDAY, MAY 28th, 1863, at TWELVE for ONE o'clock, at the AUCTION MART, Bartholomew lane, a pair of Horizontal High pressure and Condensing STEAM ENGINES each of 25 horse power, cylinders 20 inches diameter, 6 feet stroke, with portable pistons, bright planing, screw-cut, 3-inch wrought steel shaft, cast-iron fly-wheel 14 feet diameter, spur mortise wheel 8 feet diameter, and pinion 2 feet 6 inches diameter, cast-iron condenser, cast iron frames, copper valves, with gearing, &c., built by Messrs. Penn, made in 1851.—The Engines may be seen in motion at the Works in Bermondsey (by omnibus only) up to between the hours of TWELVE and ONE o'clock previous to the Sale; and Catalogues may be had of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

VENEER KNIFE CUTTING MACHINE.

MESSRS. FULLER & HORSEY will SELL by AUCTION, on TUESDAY, JUNE 9th, 1863, at TWELVE o'clock, on the PREMISES, Eagle Wharf-road, New North road, a very powerful VENEER KNIFE CUTTING MACHINE, capable of cutting from 16 to 70 veneers to the inch from wood 7 feet 11 inches long by 4 feet 6 inches wide, with rising and falling table 5 feet by 8 feet. Cast-iron planed bed, with screws, self-acting feed and reversing motion, and driving shaft, made by Messrs. Bailey & Manchester. Also, a wrought-iron cylindrical STEAMING TANK, 5 feet diameter, 12 feet long. To be seen at any time by special order, which, with descriptive particulars, may be had of Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.

13, Billiter street, 21st May, 1863.

THE BISHOP WEARMOUTH IRON WORKS, SUNDERLAND.—These valuable PROPERTIES with the Rolling Mills and all other Machinery, the property of the Derwent and Consett Iron Company, Limited, will shortly be sold by Limited by PUBLIC AUCTION, by direction of the Trustees, and under the sanction of his Honour the Vice-Chancellor Kindersley. The time and place of sale, together with further particulars, will shortly appear.

JOSEPH ANDERSON, Solicitor to the Trustees.

Newcastle-upon-Tyne, 11th May, 1863

THREE ACRES of VALUABLE FREEHOLD BUILDING LAND, Barnes, close to the Railway with Horse

MESSRS. GLASIER & SON are instructed to SELL by AUCTION, on WEDNESDAY, JUNE 3rd, at TWELVE for ONE o'clock, in one or more LOTS, Three Acres of VALUABLE FREEHOLD BUILDING LAND, with a Frontage of about 700 feet to an occupation road leading out of the Hammersmith Bridge Road.—May be viewed, and Particulars had of F. HAINES, Esq. Solicitor, 178, Edgeware-road; at the Boileau Arms, Barnes-road; at GARRAWAY'S; and of the Auctioneers, 41, Charing Cross, S.W.

BUILDING MATERIALS, BRIDEWELL

MESSRS. GLASIER & SON are favoured with instructions from the Governors of Bridewell Hospital, to SELL by AUCTION, on the PREMISES, on WEDNESDAY MAY 27th, and following days, at TWELVE for ONE, the valuable BUILDING MATERIALS and FITTINGS; comprising 1,000,000 capital stock bricks, several thousand feet of capital York and Pitchard stone in paving, coping, steps, string courses, cills, &c.; 100 squares of slating, 100 loads rafters, flooring, boards, and joists, forest clock and bells, iron doors, railings, bars, girders, and gratings, about 30 tons of lead, cast-iron soil pipes, sashes, doors and fittings, large coppers, slate cisterns, large stock of seasoned deals, chimney pieces, stoves, ranges, and other fixtures and fittings. May be viewed the day prior and mornings of sale, and catalogues had on the premises; and of the Auctioneers, 41, Charing-cross, S.W.

ACTON, MIDDLESEX, with in five miles of London.—Desirable Freehold Residence, with about seven Acres of Land admirably adapted for building.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to SELL by AUCTION, at the MART, near the Bank of England, on TUESDAY, JUNE 2, at TWELVE, in one lot, and if not sold, it will immediately in two lots, GROVE HOUSE, a desirable family residence, containing eight bed rooms and attics, dining and drawing room, and the usual domestic offices, with coach houses and stabling, and capital flower and kitchen gardens, vinery, taste-fully disposed lawn, with carriage drive, &c., containing an area of four acres; also, immediately adjoining THREE ACRES of excellent LAND, situated on the Acton Lane-one, and having a long frontage on the turnpike road to Uxbridge, also to two roads leading to the Acton Station; in fact, is bounded on three sides by good roads. The property is freehold, and is in every way adapted for building purposes, it is within a very few minutes' walk of the Acton station on the North and South Western Junction Railway. The subsoil is a gravelbed of gravel. The residence has been recently vacated, so that possession may be had on completion of the purchase. Particulars, with plans, may be had at the Mart, E.C.; of Messrs. WALKER & JERWOOD, Solicitors, 12, Furnival's-inn, E.C.; and of Messrs. DANIEL SMITH, SON, & OAKLEY Land Agents and Surveyors, 19, Waterloo-place, Pall-Mall, S.W.

STRAND.—The Capital MATERIALS of a recently erected Block of Buildings.

PULLEN, HORNE, & EVERSFIELD will SELL by AUCTION, on the Premises, on FRIDAY, MAY 29th, at TWELVE for LOTS, the whole of the Excellent BUILDING MATERIALS, FIXTURES, and FITTINGS-UP, of the Spacious Premises situate in Wellington-street, Strand (corner of Exeter-street), and comprising 2,000,000 capital bricks, 50 squares of slates and slating boards, prime timber in roofs, joists, and girders, 180 squares of sash flooring, glazed sashes, loop lights and other doors, iron girders, flights of stone stairs and landings, stone paving, several tons of lead in gutters, cisterns, and pipes, stoves, and other useful materials and fittings up. May be viewed two days previous, and Catalogues had at the Offices of C. O. PARNELL, Esq., Architect, 30, Pall Mall; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament Street, S.W.; and 80, Fore Street, E.C.

EAST HAM, ESSEX.—VALUABLE FREEHOLD BUILDING LAND

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, on MONDAY, MAY 25th, at TWELVE for ONE o'clock, in Nineteen Lots, about 7 acres of MARKET GARDEN and BUILDING LAND, late in the occupation of Mr. Mills, situate about midway between the Plaistow and East Ham Stations on the London, Tilbury, and Southend Railway, with frontages on the road from West Ham and Plaistow to East Ham, and Barking, opposite Plashet Park, and near the Green Man Tavern. The corner lot facing the road from West Ham and Stratford is set apart for the erection of a Tavern. Nine-tenths of the purchase money may remain on mortgage or contract at 5 per cent to be paid in nine years by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained at the Mart; at the Green Man, Plashet, East Ham; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

NEW BROMPTON, Chatham, Kent.—Freehold Building and Garden Land

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MITRE HOTEL, Chatham, on WEDNESDAY, MAY 27th, at SIX for SEVEN in the evening, SIXTY SEVEN LOTS of eligible FREEHOLD BUILDING and GARDEN LAND, with frontages to the new roads called Trafalgar and Dundas Roads, and close to the New Brompton Station on the London, Chatham, and Dover Railway, being the Central Portion of the Estate known as Prospect Park and near the Green Man Tavern and Barton's Farm. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent, to be paid in half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained ten days before the sale, at the Green Man, Plashet, East Ham; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

ADDISCOMBE COLLEGE, CROYDON, SURREY.—Mansion, House, and eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, Bartholomew lane, City, on MONDAY, MAY 25, at TWELVE for One o'clock, a first-rate PORTION of this eligible ESTATE, late the property of the Hon. East India Company; consisting of the noble mansion, built in the most substantial manner, and well adapted for a school or private institution; containing on the second floor eleven bed-rooms, nursery-room, work room, store-room, and water-closet; on the first floor, saloon, drawing room, ante-room, four bed rooms, dressing-room, and two other rooms; on the ground floor, a handsome entrance hall, dining-room at re-com, library, four sitting rooms, two other rooms, wide oak staircase; on the basement, servants' hall, kitchen, scullery, larder, housekeeper's room, butler's pantry, cellars, &c. The stew-pit-house contains, on the first floor, four bed-rooms; on the ground floor, two parlours and sitting-room; on the basement, kitchen, scullery, and other offices, and cellars. The Capital Building Land, with the fruit trees to the Upper Addiscombe Road, lot on which the lodge stands is set apart for a tavern, or for business purposes, and the remaining lots are eligibly adapted for Residences. The property is within ten minutes' walk of the New and Old Croydon Stations, about a mile of the Addiscombe Railway, and when the Addiscombe Railway is completed the Station will be on the Estate; thus bringing the property in constant communication with the City and West end at all times of the day. One-tenth of the purchase money may remain on mortgage or contract at 5 per cent to be paid in nine years by half yearly instalments, but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained ten days before the Sale at the principal Inns in the neighbourhood; of Mr. THOMAS BUCKLAND, Church street, Reigate; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

REDHILL, SURREY. Cottage Residence and Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on FRIDAY, MAY 29th, 1863, at TWELVE for ONE o'clock, a COTTAGE RESIDENCE, in Mill street, and eligible Building Land, with frontages to Mill street, the Newark, and Redstone Hill, the whole Freehold and Land tax redeemed. Nine-tenths of the purchase money may remain on mortgage or contract, at 5 per cent to be paid in nine years by half-yearly instalments; but any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the Sale at the principal Inns in the neighbourhood; of Mr. THOMAS BUCKLAND, Church street, Reigate; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

ENFIELD, MIDDLESEX, Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the Mart, London, on FRIDAY, MAY 29th, 1863, at TWELVE for ONE o'clock, several LOTS of FREEHOLD BUILDING LAND adjoining the Town, and close to the Enfield Station on the Great Northern Railway. Nine-tenths of the purchase money may remain on mortgage or contract at 5 per cent to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained at the principal Inns in the neighbourhood; and of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

REIGATE, SURREY.—Eligible Freehold Building Land

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the WHITE HART, Reigate, on WEDNESDAY, JUNE 3, 1863, at TWO for THREE o'clock in the afternoon, fifty-nine lots of FREEHOLD BUILDING LAND, eligible for the town on the road to Reigate Hill, and Linden and Park roads. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be had ten days before the sale of Mr. T. BUCKLAND, Timberhurst, Reigate; at the principal Inns in the neighbourhood; and of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

NEW BARNET, HERTS.—Valuable Freehold Building Land

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART opposite the Bank of England, on MONDAY JUNE 8, 1863, at TWELVE for ONE, FORTY EIGHT LOTS of eligible FREEHOLD BUILDING LAND, admirably adapted for the erection of a few minutes' walk of the Barnet Station on the Great Northern Railway, and commanding extensive and beautiful views of the surrounding country. The Metropolitan Railway being now open, brings the property within half an hour's ride of the City, and renders it very desirable for persons wishing to reside at a short distance from town. Nine-tenths of the purchase-money may remain on mortgage or contract at 5 per cent, to be paid in nine years by half yearly instalments, but the whole or any part of the balance may be paid off at any time with out notice.—Particulars, plans, and conditions of Sale may be obtained ten days before the Sale, at the Railway Hotel and Railway Tavern, New Barnet; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, London, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale

OLD ASYLUM, BEDFORD.—Excellent Building Materials.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on MONDAY, JUNE 1st, 1863, at TWELVE for ONE o'clock, on the PREMISES, close to the town of Bedford, the TENTH PORTION of the excellent BUILDING MATERIALS of the late County Lunatic Asylum; consisting of a large quantity of York paving, 30,000 stock bricks, brick work, fine Kelton stone cornice (the gable), quoins, string courses, and cills, brick pier with stone caps, and gates; a quantity of well-seasoned oak, comprising beams, joists, rafters, floor boards, lintels, purlins, wall-plates, &c; slates for roofs, iron gate and frame, iron bars and sash-weights, cast piping, water-pipes with brass taps, screwers in stone, doors, all fronts, sash and other windows, &c. May be viewed on Friday and Saturday before the Sale and catalogues may be obtained of the Auctioneer, 14, Moorgate street, London, E.C.; and of the Foreman, on the Estate

ACTON, MIDDLESEX.—A well-stocked Orchard, and valuable Free Building Land, 5 miles from the City

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, JUNE 8, 1863, at TWELVE for ONE o'clock, in SEVENTEEN LOTS, a well-stocked ORCHARD and eligible FREEHOLD BUILDING LAND, with frontages to Bollo bridge-road, near to the village of Acton. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent to be paid in nine years, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained at the Inns in the neighbourhood; of Messrs. RUSSELL & DAVIS, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

OUNDLE, NORTHAMPTONSHIRE.—VALUABLE FREEHOLD ESTATE.—The Talbot Inn, as a Private House.—TO BE SOLD BY AUCTION, by

MR. S. DEACON, on the PREMISES, on the 28th day of MAY, 1863, at SIX o'clock, in the Evening, in one or more Lots, as may be determined upon and subject to conditions of Sale, all that valuable Messuage or Dwelling-house, so long known as THE TALBOT FAMILY INN AND POSTING HOUSE, situate in the centre of the Town of Oundle, with a large frontage in New Street, including the Market Hill, together with the garden, extensive range of stabling, granary, and lofts over them, coachhouses, outbuildings and yards in the rear, covering half an acre of land. The building is of stone, and the principal and interesting feature of the town from its Elizabethan front, built with part of the stone from Fotheringhay Castle, contains numerous sitting-rooms, kitchens, and all usual offices on the ground floor, a large dining or hall room extending along the whole front of the building, with nine good bed-rooms and closets on the first floor, and seven attics above. Immediately behind the house is a large yard, wells of excellent water, a good garden, ten stables, barns, and numerous outbuildings, with a private entrance at the back. The inn and premises might at no great expense be easily converted into an excellent trade or family house, as all good cottages, and parts of the extensive back premises may be advantageously sold off, and the whole estate, from its situation and extent, forms a very valuable investment. Plans may be viewed, and further particulars known, on application to the Auctioneer, and at my offices in Oundle

CHAS. THOS WILSON.

Oundle, 6th May, 1863

OAK, ASH, AND ELM TIMBER.—WASTCOTE, near PINNER, MIDDLESEX

MESSRS. HERON & SONS are favoured with in ten lots from A. W. Tooke, esq. to SELL by AUCTION, on the Spot, at Eastcote, on FRIDAY, MAY 29, 1863, a MAGNIFICENT LOT of TIMBER TREES, consisting of 1,000 timber oak in boles, about 400 ash timber trees, ditto spreading, oak, ash, and elm, which are well worthe the attention of ship builders, coachmakers, and others, many of the trees being of large dimensions. The Estate is situate in the Lots are 2 miles from the Pinner station, and in the fields adjoining close to good hard roads, and very convenient for removal.—May be viewed seven days before the sale, by application to Mr. CLARK, at Pinnerhill Farm, Pinner, of whom a map then be had; as also of Mr. CHARLES WRIGHT, at the Shop; and of Messrs. HERON & SONS, Auctioneers and Valuers, 4, Charles, Middlesex

LINCOLN'S INN FIELD (near to).—To TRUSTEES, CAPITALISTS, and OTHERS.—Eligible FREEHOLD PREMISES, occupying an area of 6,000 feet, let on lease at a net rent of 300l. per annum to responsible tenants, who have expended a large sum of money in repairs and improvements, and for which and insurance from fire for 4,000l.—By Mr. MASON, on MONDAY, JUNE 8, at the MART, by order of the Devisees in Trust under the will of Andrew CLARK, esq.

NOS. 5, GREAT QUEEN STREET, opposite the Freemason's Tavern, with extensive workshops in the rear, four new tenements and dwelling-houses fronting behind the shop-houses, 7, 8, 9, and 10, Duke street, with frontage on Parker-street of 75 feet, including two houses, Nos. 26 and 27, occupied as the Boomerang Refuge for Destitute Boys. The tenancy is determinable by lease or agreement at the first seven or fourteen years of the term, therefore possession may be had in 1865, if required.—To be viewed, by permission of the tenants, by cards only, which may be had of the Auctioneer, 15, Panton place South.

HONDURAS MAHOGANY for PUBLIC SALE on THURSDAY, 28th MAY, 1863

C. LEARY & CO. will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Cornhill, on THURSDAY, the 28th inst. at SIX o'clock precisely, a large CARGO of HONDURAS MAHOGANY, of Superior Quality, consisting of Logs, and good Scantling, just landed at the West India Docks, "Intrepid," from Belize. To be followed by a choice Parcel HAVANA CIGARS, each of which will be delivered as may be had, with about the Broker's Sale No. 19, Old Broad street, City.

REDHILL, Reigate, Surrey.—Valuable Freehold Building Land

MR. THOMAS PAGE begs to announce that he has received instructions from the Proprietors to SELL by AUCTION, at the MARKET HALL, Redhill, on SATURDAY, the 23rd of MAY, 1863, at FOUR o'clock in the afternoon punctually, a compact and valuable FREEHOLD ESTATE, situate on the Brighton road, adjoining the London and Brighton turnpike road, and near to the station at that place. This property will be found very desirable for the erection of building sites, each having a frontage to the road of about 30 feet, and a depth of 150 feet, and a new road is set out in the course of construction, from Redhill Wray Common, through the property, which will greatly add to the value of the land, and afford facility for the erection of additional premises. A plot will be submitted separately, and payment of a considerable portion of the purchase money may be allowed to remain. The estate is delightfully situated, the surrounding scenery embracing the best woods of Gatton, the distant Surrey Hills, and a highly-diversified country not to be surpassed. The neighbouring residences are of the first character, and the locality is in every respect healthy. The property is within a few minutes' walk of Redhill Junction, by numerous cross roads, and is only about one hour's ride from the City. For further particulars, and conditions, apply to the Auctioneer, Thomas Page, esq. and his Lightly situated, Redhill; at the Plans, Deeds, and Surveys, at the "Estate Offices" Office, Fleet street; at the customary Inns in the neighbourhood; of CLAIR J. GRECE, Esq. Solicitor; of Mr. BONNY, stationer, Redhill; and of Mr. T. PAGE, surveyor and General Valuer, Reigate.

ON MONDAY, JUNE 1 at TWELVE for ONE, punctually

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Cannon terrace Caledonian road, No. 2, with a, and the PLANS, Deeds, and Surveys, a lease of 80 years, of 2 capital DWELLING-HOUSES, each containing 6 bed rooms, parlours, kitchen, and other conveniences, and with the side Garden Ground at the rear, and a frontage to Cannon terrace, Caledonian road, of 30 feet wide by 70 feet deep. Particulars of the Auctioneers, 23, Cannon-street, Hampstead road.

[For remainder of Auctions see p. 379.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of C. & J. Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, and published at the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 2, York street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, May 23, 1863.

Wheelwrights and Contractors—1 Dean-street, Oxford-street, and Parker's-row, Bermondsey.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively applied, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
19, YORK BUILDINGS, ADELPHI

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ESTABLISHED 1774.

A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper, and Zinc; Patent Locks of all descriptions Chains, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, 4s. 3 and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.

J. H. BOOBBYER (late STURGA & BOOBBYER), established nearly 20 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

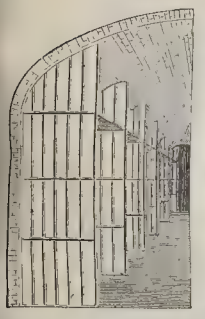
PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, S, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming; at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.



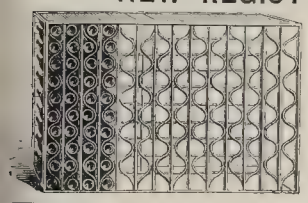
HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

HOBBS, ASHLEY, & CO. 76, CHEAPSIDE, E.C.
Manufactory—BRITANNIA FIELDS, WHARF ROAD, CITY ROAD.

WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side by side*, and the ROASTER is constantly replenished with fresh air."

DURABILITY of GUTTA PERCHA
TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter PRICE'S PATENT CANDLE COMPANY, Belmont Works, Battersea, March 11th, 1862.
"In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many hundreds and other persons have lately examined it, and there is not the least apparent difference since the first laying down. Now several years, and I am informed that it is to be adopted generally in the houses that are being erected near."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

IMOPRTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of th above Architects to be properly laid.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS. Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether adulterated or not, the same of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Worse than what has once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of the Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small. 6th. Under slate, metal, or tiles, it is a most effectual non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c preventing the radiation of Heat, saving 20 per cent. of Fuel, and deadening Sound.

GLEANINGS from WESTMINSTER ABBEY.
By GEORGE GILBERT SCOTT, R.A. F.S.A.
With Appendices, supplying further particulars, and completing the History of the Abbey Buildings, by several Writers.
"The rapid sale of the first edition of this work makes no apology necessary for the publication of a second edition; rather, perhaps, some explanation is required of the long delay which has occurred in preparing it. This has arisen from the time required by the engravers for the number of new illustrations, and full advantage has been taken of this for the elaborate researches of Mr. Burges in the new and admirable papers which he has added to the volume. These have indeed required more time than was expected, but the reader will be well satisfied with the result, and the momentaneous of a few months' delay has been cheaply purchased by the addition of so much valuable matter. The papers added to the present edition are those on the Metal-work, the Mosaic Pavements, the Retabulum, the Sedilia, the Coronation Chair, the Shrine, and the Tombs."

The Builder.

VOL. XXI.—No. 1060.

Liverpool Exchange Buildings Competition.

SINCE the competition for the Government Offices, there has been none to compare in extent or interest with that for the New Exchange Buildings at Liverpool, the designs for which are now being exhibited to the shareholders in the Old Sessions House in that town.

That a premium of 1,000*l.*, and two second premiums of 250*l.* each, should be offered for the three best plans, is an almost unheard of event in these days of architectural competition, when so small a sum as 5*l.* is occasionally set up, in the full assurance of obtaining numerous respondents among the host of poorly-paid draughtsmen and pupils ambitious of emulating more practised hands. That so respectable an amount will not prove a mere delusion and snare is much to be hoped for; though a certain member of the committee did hint, with the object, we suppose, of silencing the economists among the shareholders, that the successful architect would no doubt be glad to allow that sum to be deducted from his commission in the event of his carrying out the work; but the merchant princes of Liverpool will probably feel they have a character for liberality and honour to sustain, which ought to override any such mean considerations.

Unlike the Government Offices, the Exchange Buildings are a purely commercial undertaking, with the object of realising a remunerative rate of interest on the capital invested; not perhaps undertaken in the first place solely for that object, but because the inconvenience and insufficiency of the present buildings have long been felt by the leading merchants and brokers. It is now some eighty years ago since the present quadrangle was erected in a Classic style, conforming to the architectural features of the town-hall,—an excellent structure by a Bath architect, reminding one strongly of the prevailing Italio-Classic character of the edifices of that city.

The quadrangle and group of buildings forming the present Exchange has long been noted as an object of architectural interest in Liverpool, not for any refinement or peculiar beauty of detail or construction, but from the completeness and unity of the *tout ensemble*, —a completeness that is particularly striking to a stranger, and which, it is well known, is particularly admired by the many foreigners who visit the town. In addition, it has the advantage of possessing one of the best composed groups of sculpture (speaking architecturally) perhaps in England. Notwithstanding all these external recommendations, the offices are badly arranged, ill-lighted, and ill-contrived in every way; while the news-room, though large, is totally inadequate to the accommodation required; and, from want of height, is, when crowded, hot and ill-ventilated. To illustrate the evils of a system of design which does not adapt itself to wants and requirements, but is subservient in internal arrangement to some supposed beauty of external ordonnance, no better example than the present buildings could be pointed out.

The problem which the committee have placed before the architects of England to solve is one demanding great skill, judgment, and experience; for where the ground cost 80*l.* per square yard, it is plain to see that to prove a remunerative investment, every inch must be economized. Probably never before was there a competition in which so many points have been decided beforehand for the guidance of the competitors; and in the ratio of the limitations placed upon the architect's judgment have the difficulties he has had to contend with been increased. The general form and exact boundaries were predetermined by the surrounding streets, and inner quadrangle or "flags," which must remain intact. The block plan may be described as forming the three sides of a quadrangle facing the south; with wings of equal depth, north and south; but the western wing is of a breadth sufficient to form almost a square block, measuring 185 feet by 170 feet, in which it is intended to place the news-room, containing not less than 1,350 yards superficial, and not less than 20,000 cubic yards. In the south end of the eastern wing, the Magnetic Telegraph Offices and Stock Exchange are to be placed, thus fixing beforehand the two most prominent features of the plan. Had the instructions ended here, it would have been well for the minor points, such as the height of the ground floor above the flags: the height and number of stories, &c. &c., might very judiciously have been left to the judgment of the competitors. The appearance of a foregone conclusion about the instructions, as if framed upon some existing plan, of which the framer could not divest his mind, is rather noticeable; so that arbitrary points are not sufficiently distinguished from essentials.

In addition to what has been fixed by the committee, there are three existing passages from the flags to the surrounding streets, which must be retained for public convenience; so that, to a reader unacquainted with the place, it will be difficult to conceive what *has* been left to the architect's own judgment. The problem may be succinctly stated as this:—

The form and position of the news-room, in the western wing, and mode of lighting and ventilation: the mode of lighting and arrangement of surrounding offices: the position of underwriters' room, and room for sales by auction: the general arrangement of offices, with sales-rooms, requiring a northern and eastern light: the method of lighting the corridor and the position of the staircases.

Looking now to the designs submitted, the first feature of the exhibition which forces itself upon the mind is the predominance of Renaissance designs, especially those of a French character; but Italian-Venetian, Anglo-Italian, and all the modifications and mixtures it would be hard to name, are also represented. Several of the designs approach the Roman manner, but out of forty-four sets only three are Gothic, showing clearly the influence of the style of the present and surrounding buildings has been too strong even for Mediæval talent to overcome.

Among much that is really good and clever there are many showing their authors have not been imbued with the spirit which should pervade a design formed under such peculiar and restricted circumstances. A profuseness of campanili and Mansard roofs distinguishes many,—an architectural treatment which, however suitable in a concentrated block of buildings, might destroy the beauty of a quadrangle. The lowness of the stories fixed by the committee forms a difficulty in the way of creating a grand façade which most of the competitors have felt and struggled against; and it is questionable whether, on the whole, any more successful way of overcoming it has been devised than the old-fashioned one, often condemned, of employing an order two stories high. The ground story looks in all the elevations unquestionably too low for solidity and grandeur; and it would be well were the committee to reconsider their decision, restricting its height to 12 or 13 feet. The passage from the flags into Oldhall-street has been felt by the competitors to be much too wide for the height; and a good many have, in consequence, divided it into two archways; but whether this will be allowed or not we cannot undertake to say; and, on the contrary, were the opening taken up through two stories, there would ensue a loss of valuable space. The centre of the quadrangle over this opening is in most of the designs crowned with a dome, Mansard roof, or campanile, the competitors evidently feeling the want of a central feature to balance the preponderance of the wings.

In the arrangement, form, and position of the news-room lie the greatest scope for good and symmetrical planning; and the forms adopted are as various as the methods proposed for ceiling it The parallelogram; square nave and aisles; nave, transept, and aisles; Greek cross, circle, and other intermediate forms, has each its admirers. Domes with pendentives and without; barrel vaults; glass roofs; coved and flat ceilings, either covering the whole room or only partially, and supported on piers and shafts, distinguish the different modes by which the several competitors propose to ceil this large space; and great skill has been shown in the difficult question of lighting, and the arrangement of surrounding rooms and offices, without throwing away land in useless courts. The underwriters' room is in all the plans, either shown opening out of the main room, or in its immediate proximity. In the arrangement of the Magnetic Telegraph Office and Stock Exchange, and rooms connected therewith, less scope is possible; but even here a wide difference of skill is evinced. While the arrangement of the general offices follows mostly that of a central corridor, with staircases at intervals, there are one or two exceptions which it would not, however, be wise to adopt; but it does not appear quite clear how some of the corridors are to be lighted, there being but little choice in the mode of effecting it. The arrangement of central corridors, while facilitating access to the offices on either side, presents a difficulty in the way of effectual lighting and ventilation. In the Exchange Buildings there seem to be but three feasible plans of effecting this:—by open spaces left in the floors above; by borrowed lights in the adjoining partition walls of offices; and by the light obtained through the wells of the staircases; which latter, though in itself insufficient, will prove a valuable auxiliary. The eastern wing, being wider than the central block, is difficult to manage in this particular without losing valuable space; but we will refer more at length to this when criticising the details of each plan.

In only two cases could we see that the competitors had availed themselves of the permission to send in *extra* coloured drawings showing the hues of the materials to be adopted; the whole, be it said to their credit, rigidly adhering to the sepia shading. Possibly the labour involved in fifteen elaborate drawings left the competitors no time or inclination to furnish anything *additional;* and it is satisfactory to find that such a permission, which many must have felt almost painful, cannot, from the wise course they have adopted, sensibly affect the judgment of the committee. It is open to question, whether in the first place it was well to make such a restriction; for it is indisputable that colour no less than form should be an element in external architecture; and also that a design suited for coloured materials would not show its visual outline correctly in a mere sepia drawing. With these preliminary observations, which we have thought necessary for the proper understanding of the plans, we will now proceed to a critical review, taking each design separately, though not in the order in which they are exhibited:—

"Fairplay."—The design numbered 1 on the list published by the committee, and the first seen

on entering the north room, possesses a news-room of the nave and aisle type, with apsidal end, the aisles being continued to the façade to "flags," forming the retiring-rooms for conversation, with windows looking into the quadrangle or "flags," as specified in the instructions. This plan will hardly be as convenient as a plain parallelogram, and is certainly inelegant in form, from the vestibule to the news-room being taken out of the nave, giving the plan a high-shouldered appearance. The external design is not without a certain elegance, but wants continuity and unity. The elevation is divided into a rustic basement and first floor; an order, two stories high; and an attic; the whole crowned with a continuous truncated roof, which the author intends for a fourth floor of offices should they be required: if not he proposes to finish the roof (flat ?). The position of the news-room is clearly indicated externally; the huge semicircular window for lighting it not being a feature by any means adding to the beauty of the quadrangle. The corridors are central, but it does not appear on the plans that are hung in which way the author proposes to light them.

The plan is not a symmetrical or systematic one. The underwriters' room is in the south-west angle, opening out of the news-room, but would be very low, apparently only one story high, offices being shown above it on the first floor. None of the sections being hung in this set; nor with a very few exceptions are they in any; renders it a greater task to get at the author's real intention. Of all the drawings there must at least be an average of six out of the fifteen lying on their faces upon the table; so if any of the authors detect a deficiency in the explanation of their plans they must set it down to this cause. If it is not necessary to hang the plans, it has been a work of supererogation drawing them; and it is likely, had the committee lessened their demands, that a greater number of designs would have been obtained. The style adopted, in No. 1, is quasi-Classic. It is proposed to heat the news-room with hot water, and to cellar under the whole of the flags: the iron trap-doors shown in the flags would simply be useless. The author can hardly have seen the ground; still it is difficult to understand the poetical licence of showing *trees* in the perspective.

"290," No. 3 on list.—The style adopted in this set of plans is not very marked or developed. It possesses a large news-room, a parallelogram in plan, with side aisles. The underwriters' room is in the north-west angle of news-room, an octagon on plan. The room for sales by auction is spacious, situate in the basement, immediately under a small central court to the north of news-room. This court as so arranged is perhaps the best way of getting over the difficulty of lighting the inner offices. It is questionable whether it be wise to abstract so much space to form a hall to the Telegraph-office and Stock Exchange, though it would in itself be a handsome feature. The offices are arranged with central corridors, and the plan possesses the advantage of symmetry and simplicity, being one of the best, most economical, and practicable among the forty-four. Unfortunately, the artistic design is very inferior to the planning, the campanile over the central passage into Oldhall-street being ill designed and disproportionate, decidedly the worst feature in the design. The news-room possesses a flat ceiling, and is lighted with side windows. It runs from the "flags" to Rumford-street, with entrances at each end. It appears as if the lift in the eastern wing would not act higher than the ground-floor, the stairs being shown over it in the first-floor plan. From the motto chosen, the author must be an admirer of Captain Semmes and the *Alabama*.

"Fuimus" (4).—The best of the Gothic designs, which may be contrasted with "290," just described. It possesses a well-designed elevation, showing great power and knowledge of the style, together with perhaps the worst-arranged plan in the whole set. It is really surprising, considering the talent shown in the exterior, how the same mind could so mistake the object of the building or rest satisfied with so ungainly a plan. The most noticeable feature is a long corridor occupying the whole length of the centre, and both wings adjoining the exterior, so that the whole of the light for the offices is obtained on one side, and the windows of the principal façade merely light the corridor. It would be difficult to divide such deep offices so that they could be used except by artificial light; and the tenants would be, if anything, worse off than they are now. The news-room is a parallelogram, approaching a square, with two rows of clustered shafts supporting ornamental ribs, sustaining a barrel vault. A great deal of originality is displayed in the design and decoration of this room, which is lighted by glass panels in the vault. The roofs are broken, high pitched, and truncated, with the walls carried up in gables and breaks for their support. The general outline is firm and well contrasted, but the prevalence of a similar character of window in all the façades has rather a monotonous appearance. Coloured arches, windows with central shafts and trefoil heads, recessed and without projections, and a bold, well-designed cornice, are the most distinguishing features. The character of window adopted is unsuited to offices, and the plan will certainly not be carried out, simply because it would not pay.

"Labor Omnia Vincit" (15). Judging from the number of people who cluster round this design, it is the centre of attraction. The Committee must also think well of it, as *all* the drawings appear to be hung, and in consequence it is an easier matter to describe and criticise it. The news-room is a parallelogram stretching from east to west, with an entrance on the flags and also in Rumford-street. It is proposed to connect the east wing, containing the Stock Exchange and Telegraph-office, with the west wing and news-room by a covered arcade stretching across the flags, and containing, under a central canopy, designed in the manner of a triumphal arch, the group of statuary representing the allegory of the death of Nelson. This would form a fine feature in itself apart from the quadrangle, and would doubtless be of great utility in providing a cover during rain for those who are not subscribers to the news-room, or who prefer being in a more open atmosphere; but it would cut the square in two, and also hide the beauty of the main buildings.

The present arcades form a convenient and pleasant shelter in wet weather or strong sunshine; and if nothing be provided in place of them the want of shelter will be greatly felt. Certainly no better scheme has been devised; for the arcades are inadmissible where they are taken,—as in the present buildings, and in the plan marked "Sine Labore Nil,"—out of the space that should be arranged for offices: it will not pay to give up that space: the shareholders cannot afford it. The south side of the news-room is arranged with a corridor and offices looking on to South Chapel-street. The underwriters' room is in the north-west angle; and a central court, and smaller court, occupy the north side of the news-room. There is also a small court in the eastern wing. The corridors are central in the side facing Tithebarn-street and Chapel-street. The method of lighting is by glass panels in the doors. This is the weakness of the plan, but a weakness which distinguishes most of the best plans. Could a more satisfactory method of lighting the corridors without increasing their width be conceived, the inventor would deserve the thanks of all architects.

A large space in the eastern wing, communicating with the arcade and a grand staircase to the Stock Exchange, is left open, without it being shown in the plan whether it is intended to form it into the Telegraph-office. The great defect in the news-room is the space taken up with central piers and columns, which, however well they look in the interior perspective, would prove a positive practical objection; and undoubtedly a simpler plan would in execution look far more noble and spacious. The lighting is by three glass domes, but the whole management of the news-room internally should be reconsidered; nor would any alteration made in this affect the other portions of the plan. There are entrances and small one-story porticoes in the south side of the east and west wings: whether permission could be obtained for erecting these we cannot undertake to decide; but they might be left out without injury to the elevations. The central passage, 20 feet wide, leading to Oldhall-street, has been boldly spanned with a semicircular arch; and, though looking rather tunnel-like, it would not have an unpleasant appearance; and, taking all things into account, is perhaps the most sensible way of meeting the difficulty. There is a sad dislike in the architectural mind to anything strange or opposed to existing notions of proportion, and very likely many will disapprove of it.

The author proposes also to set back the face of the building from the existing lines, and so form an area for lighting the basement, and argues that the loss of ground resulting would be met by more than an equivalent in the increased value of the basement story. The streets would certainly be improved, but the committee will consider twice before they sacrifice such valuable space. It would be well for them to consider whether the height of the ground floor above the flags could not be increased with advantage. Better basement offices would thus be obtained; and, by adding a foot or more to the height of the ground story, the whole appearance of the structure would be improved: it is here it wants height and solidity. In the event of this being done, the setting back of the face of the building would not be required, and the space so gained would be more than an equivalent for any presumed inconvenience resulting from raising the ground floor. Of the artistic execution of the perspectives and elevations it is impossible to speak too highly;—not laboured, but every touch telling. The design is elegant and complete: the stories are well indicated by strings and mouldings; and the whole is crowned with a very handsome cornice. The attic windows cut out of the frieze, with festoons between, have their prototype in the adjoining Liverpool and London Chambers, by Mr. Cockerell; or envious people might laugh at them.

The basement is rusticated; and between the windows are a species of broad pilaster, inlayed with a pattern in marble, treated very cleverly with the strings continued through; preventing that vertical cutting up of the stories so objectionable in many Palladian designs: notwithstanding this the order is strictly preserved, and some of the lines are carried up through the two stories unbroken. The vertical and horizontal lines are judiciously balanced and amalgamated, and a great deal of tasteful design is exhibited in the management of the fenestration and sculpture, and in varying the vertical lines and projections to suit the internal plan. It is the least monotonous of the forty-four designs; at the same time being more connected and unique, more pure in conception, and the only one that would thoroughly harmonise with surrounding buildings, and preserve the *spirit* of the place. The order employed (though sparingly) is Corinthian; and a handsome portico indicates the entrance to the news-room, with a corresponding one on the eastern wing. A colonnade, somewhat similar to that on the present building, marks the centre over the passage, the attic of which demands a loftier treatment; one of the few defects in the design. Some critics object to the windows as being too small, or rather the proportion the glass bears to the wall space as too restricted: were it so the design would admit of a slight modification; and we are of opinion that it will contain as much glass as can be employed with any architectural effect. We must stop here for the present.

CONCERNING THE FRENCH EXHIBITION OF WORKS OF LIVING ARTISTS.

THE French journals apparently are so much occupied with the approaching elections, as to be unable to give their wonted attention to the Exhibition of the Works of Living Artists, which was opened in Paris on the 1st of this month. Usually, their reviews of art-exhibitions extend to great length: the articles in the *Moniteur* especially, written by M. Theophile Gautier, every two years, on the works displayed at these intervals in the Palais de l'Industrie, are continued in number after number of the paper, and even till some weeks after the Exhibition has been closed; and each of the journals finds it its interest to devote to the subject, a portion of its exceedingly small space, much more considerable relatively, than is appropriated by our newspapers to the Royal Academy. A similar contrast might have been remarked in the manner of proceeding, between the English and French journals, in the case of the International Exhibition last year: though the quality of the matter that did appear in our newspapers, was on that occasion, at least equal to that of the matter in the French. The contrast generally, between the French and English press, in art-criticism, may be in part owing to the restrictions upon the treatment of political questions in France; but something is also due to a greater popularity, and a higher appreciation, of art amongst the French. Many who are aware of our recent progress, may not be satisfied to receive assertion of the fact; but the difference, we have every reason for saying, still exists.

It should be noted that on one day in the week, the Exhibition in Paris, is open to all persons without charge; whilst the ample space which the galleries of the building in the Champs Elysées afford, allows every picture to be displayed in a manner of which those who are merely acquainted with the way of piling up the works on the walls of the galleries in Trafalgar-square, can have no idea. Sculpture too has ample space; and backed by drapery, and with the area of exhibition laid out as a garden, seems to us arranged in the best manner for its appreciation; though we are aware, some sculptors are not satisfied with the system—followed now, in part, in the Horticultural Gardens, South Kensington. Whatever may have been the impression conveyed by the International Exhibition, as to the comparative excellence of the productions of the painter's art in France and England, there could have been slight question of the excellence of the French sculpture; and we should be quite justified in referring to the difference of treatment of the art in the Paris and London exhibitions, for some explanation of the fact. Curious enough, after all, is it that there should be such difference, seeing that the commemorative statues in public places in London, far exceed in number those which are to be found in the streets of the French capital. There are groups both of marble and bronze, in the gardens of the Tuileries and the Luxembourg,—ideal compositions, or copies from the antique,—there are some commemorative statues, not equestrian, as one of Marshal Ney; there are splendid fountains, and many fine works of sculpture combined with architecture; but we know of no more than two or three equestrian statues, of any kind, to set against those that may be found in London.

As regards painting and other branches of art, what has been displayed in London has afforded little opportunity for comparing the numerical importance of the works in the two countries. The Paris Exhibition, indeed, takes place only every two years; whilst it is almost the only one: it is, however, of vast extent compared with that of the Royal Academy, and it necessarily does not include the works of the highest class of all, of the nature of architectonic and mural decorations, which are added every year to the churches and public buildings. It does include large numbers of works, not of life-size sculpture or oil-painting, which in our Academy are either not received at all, or have been regarded with coldness as though not belonging to the fine arts. The best results for the several branches of art, it is evident to us, follow from the different system in all respects, of which we have evidence in the exhibition in the Palais de l'Industrie; although it may surprise some English readers to learn that there are Frenchmen who are now complaining of disadvantages under which they consider they labour, for art-workmanship in approaching rivalry with that of England, which deficiencies they are anxious to have removed by the formation of particular collections and educational agencies that they consider they do not possess at present. To this latter question, we may return at some future opportunity.

As regards the exhibition of architecture, it must be confessed that our French brethren are even less in the habit of showing drawings of their works, associated with the works of painters and sculptors, than our own architects. However, they are much more attentive than ours, to publication in illustrated books. Whilst their mode of study in many respects deserves our attention, perspective drawing seems hardly to have its value recognised; and the deficiency referred to, would, if corrected, we believe go far to the removal of some of the short-comings that, we ought to say, their architecture has. French architects seem to be even better skilled than our own, in viewing the result from geometrical drawings alone; yet, albeit these drawings theoretically should present the perfect picture, practically or regarding the limitation of time and human power, perspective drawing or the habit of seeing geometrical drawings converted into a perspective view, is almost essential to the architect.

Making all further allowance for difference in the numbers of the works in the London and Paris exhibitions, an English editor would hardly dare to administer to his readers a succession of notices of the Royal Academy exhibition, having the same proportion to the works there, as the notices in any one of the half-dozen Paris newspapers have to the works in the Palais de l'Industrie. This year, however, if we may judge from journals that have come to our hand, the candidature of MM. Thiers, Jules Simon, and Havin, and others in Paris, in addition to that of late deputies who bore a noble front in the Corps Législatif, dominates for the time even over the fine arts.

The central area of the building in the Champs Elysées is laid out, as we have said, as grass-plats and garden-ground; the space under the galleries, which is filled with boxes used in the agricultural shows, being shielded off by the draperies forming a background to sculpture. There are twelve grass-spaces, arranged with a central alley, bordered by statues, and terminated at each end of the area by a model of a monumental fountain. At the intersections of the transverse alleys with the principal alley, are circular spaces, "*rond-points*," also adorned with sculpture. The centre one is the place of a group, exhibited last year at the Ecole des Beaux Arts, representing Ugolino and his children dying of hunger. At the extremities of one of the transverse alleys are figures of Homer and Molière. The whole collection comprises a considerable number of figures of deities, heroes, and historic personages, and fanciful subjects.

The paintings and other works of art are upstairs, in saloons and galleries. A gallery surrounds the central area; so that a view is obtained as from a balcony, of the garden and sculpture below. The whole disposition in the Palais de l'Industrie, though now repeated for several years, it should be understood, is regarded as temporary; and every year the claims of the Exposition to a location of its own are put forward; and probably they will be attended to, when the question of lighting has been duly considered.

At present, the pictures are lighted as exhibited works are in galleries and every building of "ferro-vitreous" construction of the original character of the London building of 1851, that is from sky-lights that extend from wall to wall, without interval of lead-flat or any feature of construction except the slightest available members of framing and guttering,—the light, however, being softened by a *velum* of "gauze," as says an account now before us. The material used for *velum* in London exhibition galleries, we are persuaded is too opaque in every case. We spoke of the defect in this particular, in the lighting of the International Exhibition galleries. Whatever the textile fabric used at the Palais de l'Industrie, the "*gaze*" which the French journals speak of, seems to be nearer to what is required than the calico used in London. In the one case, where the atmosphere is clearer than in London, they appear to take all the light they can get: we certainly shut out much of the little that we have. The *velum* in each portion of the Palais de l'Industrie appropriated to pictures, it should be understood, does not cover the entire area of the saloon, by a difference of one or two feet, or some such dimension, all round, where the pictures are terminated by an inclined "frieze" in place of the cove adopted in our permanent galleries. From this "frieze" the *velum* is suspended.

The paintings fill three grand "*salons carrés*,"—one of them in the centre, and one at each end of the northern portion of the building,—and galleries connecting these saloons, from which there are doorways to the balcony looking on to the garden. Battle-pieces are prominent, as they were in 1861, amongst the subjects. Engravings are disposed of in the gallery returning along the eastern end of the building. In a portion of the south gallery is the exhibition of works of photography. The remainder of this gallery has been opened as an exhibition of works that had been rejected, by the jury of selection, from the principal exhibition. It is understood that the Emperor, hearing a more than the usual number of *réclamations*, and complaints of injustice on the part of Messieurs the jurors, suddenly decided to do the best thing that was possible to put an end to these complaints, by allowing all artists who chose that their rejected works should be displayed, to have such works exhibited as we have mentioned. There is really a touch of genius, as well as originality, in the manner of the Emperor's dealing with his exciteable people,—and perhaps as much now in the giving what is asked for, as there has sometimes been in withholding. An exhibition of rejected works, however, is not a new suggestion to English artists; and some say that this year especially, such an exhibition in London would pay in shillings. It may be in recollection that under the Provisional Government of 1848, all works received were exhibited: but the Republican system was discontinued in the subsequent *régime*. Possession of ample covered space in the most central spot in Paris, is of great value to the French Government: that of the Exhibition Building, South Kensington, will be not to be compared with that in the other case.

THE EXPENSES INCURRED FOR WORKS OF ART, MATERIALS, AND WHATEVER ELSE RELATES TO THE ERECTION OF THE FAÇADE OF SANTA CROCE, IN FLORENCE.

FOR the three bas-reliefs in the lunettes of the doorways intrusted to Professor Dupré, and executed, the middle one by the Professor himself, and the others over the smaller doorways, the one by Sanrocchi of Sienna, and the other by Zucchi of Florence, both pupils of Dupré, 66,522f. 26c. (2,660*l.* 1s. 10½.); the Madonna Addolorata of Professor Dupré, 2,240f. (89*l.* 12s.); the St. John of Professor Salvino Salvini, 1,680f. (67*l.* 4s.); the Penitent Magdalene of Professor Ulisse Cambi, 1,680f. (67*l.* 4s.); the two angels who are in the attitude of adoration at the chief doorway, by the sculptor Lusini, 1,680f. (67*l.* 4s.); the group of the Crucifixion, by the sculptor Ulderigo Medici, 11,340f. (453*l.* 12s.); the decorative statuettes over the smaller doorways, half figures in bas-reliefs in the soffits of the three doorway arches, 14,273f. 14c. (570*l.* 18s. 6d.); the jambs, architrave, and consols of the chief doorway, carved by Professor Pietro Giusti, of Sienna, 9,999f. 84c. (399*l.* 19s. 10½d.); the jambs of one of the smaller doorways carved by Casaglia, 2,520f. (100*l.* 16s.); the jambs of the other smaller doorway carved by Luigi Giovannozzi, 2,520f. (100*l.* 16s.); various ornaments mostly executed and modelled by the skilful ornamentist Francesco Giovannozzi, 15,923f. 46c. (636*l.* 18s. 5d.); timbers, 12,348f. (493*l.* 18s. 5d.); ladders for scaffolding, 991f. 20c. (39*l.* 14s. 7½d.); iron bond, 378f. (15*l.* 2s. 5d.); ropes, 1,428f. (57*l.* 2s. 5d.); various gears, 1,848f. (73*l.* 18s. 5d.); 2,600,000 pounds of white marble, 84,240f. (3,369*l.* 12s.); 430,000 pounds of green Prato gabbro marble, 36,120f. (1,444*l.* 16s.); 45,000 pounds of Maremma red, given by Count Ugolino Della Gherardesca; other marbles in small quantities, such as green Pisa serpentine, Asriano black, Garfagnana columbino red for the three door sills; Rosso antico given by the Royal manufactory of pietra dura mosaic; lacca lime, 2,898f. (114*l.* 18s. 5d.); 128,000 bricks at various prices, 240 cartloads of quarry stone, 1,100 cartloads of Arno sand, copper bond, 5,880f. (235*l.* 4s.); iron bond, 1,260f. (50*l.* 8s.). Total, 488,830f. (19,553*l.* 4s.) This we glean from the *Ferenze*. The architect is the Cavaliere Niccolo Matas. Our countryman Cavaliere Francis James Sloane's contribution to the building fund amounts to 260,000f., or 10,400*l.* He has, moreover, refused the decoration of Commendatore of the order of St. Maurice and St. Lazarus. His Majesty Victor Emmanuel II. has contributed the sum of 2,000f. to the work.

INSTITUTION OF CIVIL ENGINEERS.—On the 12th inst., the paper read was "On the Communication between London and Dublin," by Mr. W. Watson, M.A. This led to a considerable discussion on the 19th, when also a paper was read "On the Manufacture of Duplicate Machines and Engines," by Mr. John Fernie.

THE CHURCH OF THE HOLY SEPULCHRE.*

THIRD PERIOD.—1010 to 1130.

SCARCELY were the churches of Modestus completed when Jerusalem again passed into the hands of new masters. These were the Saracens, who professed an equal veneration with the Christians for the holy city, inasmuch as Mohammed had commenced his nocturnal journey from it to the ninth heaven: they therefore did not destroy any of the churches, but contented themselves with appropriating the temple area. The moderation of Omar was by no means followed by his successor, El Hakem, who reigned in Egypt at the commencement of the eleventh century. The actions of this khalif were so extravagant and so wicked, that it is only charitable to suppose him to have been insane, like Paul of Russia. Like the latter despot, he also suffered a violent death from his own subjects. Various reasons are assigned for his conduct in the particular instance of the Holy Sepulchre; but most certain is it that in the fifteenth year of his reign (1010), he directed a Christian secretary† to write the following order to the Governor of Jerusalem:—"The Iman commands you to destroy the Temple of the Resurrection, so that its heaven may become earth, and its length may become breadth." This order appears to have been most punctually carried out. The church was destroyed, and iron and fire employed on the rock of the Sepulchre; in vain, however, if we may credit the accounts of the transaction handed down to us. Most probably the destruction was confined to the roof of the cave and the arch of the loculus where the holy body had been placed. Accounts differ as to when the tyrant changed his mind and permitted the Christian churches, of which 30,000 are said to have been ruined, to be repaired, some assigning it to the year succeeding the persecution, while others defer it until the last year of his reign, ten years afterwards. In all probability the first restoration was merely temporary; certain it is that the buildings over the holy sites were not finished until 1048, and then only by the help of the Greek emperors. The plan of Modestus was still followed; but the churches were considerably reduced. According to both Professor Willis and M. de Vogüé, a great part of this third edifice is incorporated in the actual buildings, although added to by the Crusaders, and encased by the Greek architect after the fire of 1808. These parts are tinted black in fig. 4. It will

FIG. 4.

be seen from it how very much the want of funds compelled the restorers to simplify the building; thus the internal arcade and apse are built upon the foundation of those of Modestus, but the three apses and outer colonnade have disappeared, and the building ends to the west with a straight wall, from which projects an apse containing an altar, D. The rest of the wall is pierced with three doorways, which with the one leading out of the corridor, T, make up the four western doors described by an anonymous chronicler of the beginning of the twelfth century, whose relation is published by M. de Vogüé in the appendix to his work. At V was a chapel dedicated to the Virgin, and at D, one to St. John the Evangelist. Another, E, was dedicated to the Holy Trinity, and a fourth, F, to St. James the First, the first bishop of Jerusalem. As before said, all the other sanctuaries were very much reduced. The chapel of the invention of the cross being in ruins, there was a small oratory erected in the midst of them.

FOURTH PERIOD.—1130 to 1808.

Church of the Crusaders.—It has been but too often the fashion of modern historians to sneer at the Crusades, by calling them not the holy but the unholy wars, totally forgetting the difference between the Eastern and Western ideas of toleration, to say nothing of the state of feeling some centuries back. And, indeed, to a modern Englishman accustomed to the complete toleration of his own country,—where not only all sects follow their own devices, but can even attack the Established Church through their representatives in Parliament, or through their organs of the press,—it certainly does seem strange that at the end of the eleventh century the whole of Europe should have gone to war with Asia for the possession of a single city.

But let any one live in an Eastern city for a few months, and he will then easily understand how vexatious and galling is the rule of the followers of Mohammed, even when they only hold their own by the forbearance of the Christian powers. In the eleventh century their yoke had been made very grievous indeed by the tyranny of El Hakem and his successors, and accordingly the avenging army of the Crusaders entered the city on the 15th of July, 1099, and an indiscriminate massacre of the inhabitants indicated in what light Mahommedan rule was regarded by our ancestors. What the Crusaders did to the churches they found covering the holy places, is best given in the words of William of Tyre:—"After that, by the aid of God, they had taken Jerusalem, the said edifices appeared to them to be too small, they added to the first church a solid and very lofty building, which continuing and enclosing the ancient portions, comprised all the said places within the same edifice. The annexed plan, fig. 5, which differs but very slightly from that of Professor Willis, shows how this was effected. In the first place, the apse, the doorways, and the oratory over the unction stone, K, were demolished, and upon the area of the court the architect constructed the choir and transepts of a French church; but this new work was rather irregular in plan in order to make it work in with existing constructions. Thus the northern transept is shorter than the southern one, as it joins the previously existing portico, T, while the walls of the chapel of Calvary determine the length of the other transept. However, by carrying the triforium across it, the difference is in some measure disguised.

The choir aisles are also of unequal width, being narrow on the south on account of the proximity of the rock of Calvary, and wider to the north, in order to reach the seven arches of the Virgin, as the portico T is commonly called. The following references will explain the arrangements of the new church:—A is the circular church of the third period, and which does not appear to have been altered; B is the holy sepulchre, which received a new casing, and to which we shall return; *a*, *b*, and *c*, are the little apsidal chapels, left untouched; C, the sepulchre of St. Joseph of Arimathea; D, chapel of St. John; E, chapel of the Holy Trinity; F, chapel of St. James; G, rock of Golgotha; H, chapel of Adam; I, tombs of Godfrey of Bouillon and Baldwin; J, tombs of the four last kings of Jerusalem; K, unction stone; L, the compass or centre of the world; M, the chapel of Mocking; N, chapel of the division of Garments; O, cloister of the canons; P, dome of the subterranean chapel of St. Helena; Q, chapel of the Invention of the Holy Cross; R, chapel of St. Longinus; S, the prison; T, the seven arches of the Virgin; V, chapel of the Apparition; *n*, are the stairs leading to the chapel of St. Helena; and *m*, those by which access is gained to the cloister of the canons; *o*, is a fragment of an arcade, which M. de Vogüé considers to have formed part of the atrium of the basilica of Constantine, but which Mr. Fergusson assures us only dates from the time of the Crusaders; but both M. de Vogüé and Professor Willis are agreed upon the fact of the columns at *p* being really part of the work of the first Christian emperor. Thus much for the plan. The accompanying section will show how the Crusaders carried out French architecture in a different climate, and under different conditions to what they had been accustomed. In all probability the architect alone was European, and had to trust to foreign workmen for the execution. The consequence is that we find the architecture much plainer than in France. There are few or no mouldings to the arches, and the ornamentation has evidently been inspired by ancient remains; witness the details given in plate 10. Figures also become very scarce, for the Eastern Church sets its face against sacred sculpture, and the workmen were, therefore, unprepared to execute it; indeed the lintels of the doorways in the south transept, which, like those at Westminster, formed the principal entries to the church, have every appearance of having been executed in France and sent to Jerusalem. They are in very thin stone, secured by irons, and form no part of the construction. One of them represents scenes from the life of our Lord, and the other is enriched with scroll-work inclosing little naked figures, dragons, birds, monsters, &c.

Another difficulty beset our architect. By means of frequent wars the lofty forests had long since disappeared from the mountains of Palestine, and the inhabitants had learnt to do almost without wood in the construction of their houses, by vaulting the rooms and making the vaults support a terrace. This method of construction enabled the designer of the Church of the Holy Sepulchre to obtain a large triforium all round the church, except at the east end, where it is very doubtful whether it was continued. Mr. Willis tells us that Bernardino represents it as continuing; but all the models made previously to the late fire show an arcade pierced with alternate windows. He has, therefore, restored it by a pierced clerestory in the thickness of the wall, in which he is followed by M. de Vogüé.

Again, the space at the intersection of the choir and transepts was occupied by a dome,—another instance of the adaptation of local peculiarities: however, the round church had a roof timbered, the centre being open to the air; in this respect following the traditions of every building which had occupied the site. The campanile, which rises over the Chapel of St. John, D on plan, has been destroyed down to the first story above the triforium: and in the restoration by Professor Willis there is considerable difference from that of M. de Vogüé. The latter, however, gives his authorities; viz., the engraving of Le Bruyn, and that executed by Rewich in Breydenbach's work, and it certainly looks more like twelfth century work than the other. The grand effort of the architect was reserved for the south end of the south transept, where the principal entries to the church were placed. These two doorways, the two windows over them, and the little chapel to the north, are certainly the richest portions of the edifice. The principal decoration is got in the strings and arch labels, which are all elaborately carved, thus showing what a good clever architect can do even with the simplest means. The voussoirs of the arches are deeply cut in, so as to make them appear to be made of a great number of very thin voussoirs. The tympana are very curious. It appears that the first idea was to decorate them with geometrical patterns, and the westernmost one was actually thus ornamented; before, however,

* See p. 328, *ante*. The graphic account recently published in the *Times*, of the well doings in this structure, at the ceremonial of the combined Greek, Armenian, and Coptic churches, with respect to what is called the "Holy Fire," gives increased interest to the illustrations we present.—ED.

THE CHURCH OF THE HOLY SEPULCHRE.

SCALE OF FEET

Section.

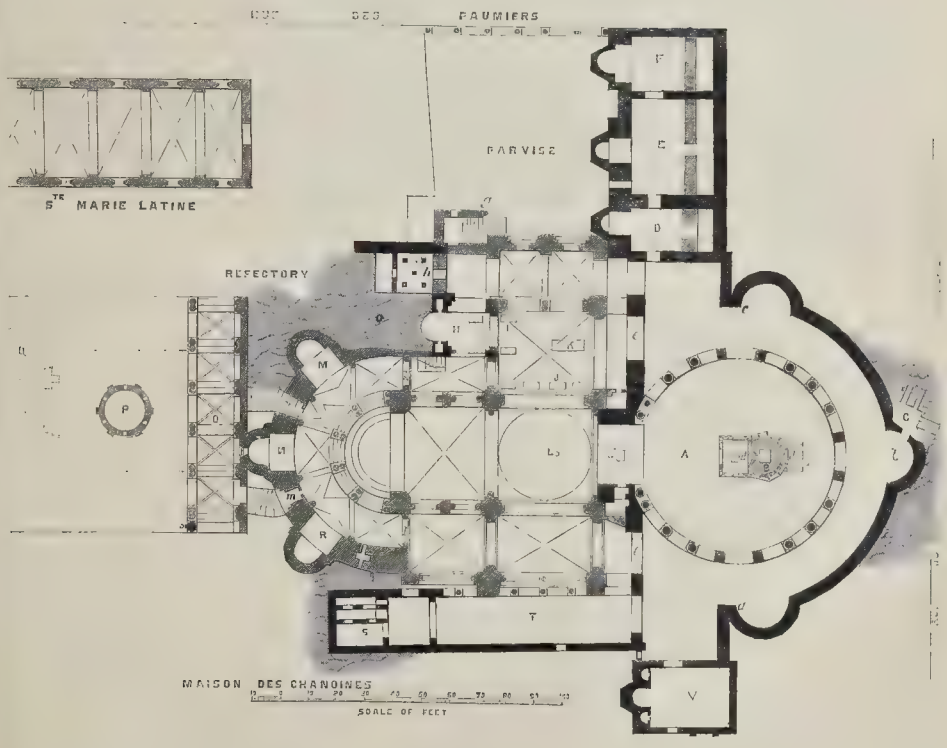

Fig. 5.

the decoration could be extended to the other it was determined to substitute mosaics, and so they were both covered over with plaster, and then with glass mosaic; that to the south representing a Madonna. Mosaics were also employed to decorate the interior of the edifice. These have entirely disappeared, with the exception of two small fragments in the upper Chapel of Calvary. One of them is part of the decoration of the tympanum of a doorway once leading on to staircase (*g*), which is now used as a chapel. This mosaic is simply a fragment of a vine branch; the other is the figure of Our Lord, which once formed part of a great picture of the Ascension, and is in the same chapel. However, from the work of Quaresmius we have a tolerable idea of what was the disposition of the other mosaics which we have now lost. In the circular church over the second order of columns was a range of full-length figures representing the Apostles and the Prophets. Under the great arch which leads from the round church into the lantern were the "Annunciation" and "Ascension." The half-dome of the apse was occupied with a large representation of the "Resurrection." The vaults of the nave and transepts had also mosaics, but were too far gone when Quaresmius wrote to be made out; but the decorations of the upper chapels of Calvary appear to have been the most costly; they were on a gold ground, and represented the "Passion of Our Lord," from "The Last Supper" to the "Ascension;" with occasionally the parallel stories of the Old Testament, the whole accompanied with Latin verses. Indeed, from the frequent use of this language in the inscriptions and the comparatively few instances of Greek, it is very evident in this case, as at Bethlehem, that the mosaics were the works of Byzantine artists employed by the Latins. It only remains to say a few words upon the Holy Sepulchre. The exterior covering was renewed in the shape of a Pointed arcade supported by marble pillars; before the door a porch was erected, replacing in some degree the ancient vestibule: this had three doors, viz., one for the south, for the pilgrims to enter; another to the north, for them to make their exit; and a third to the east. The porch was the place for the guardians of the sepulchre, and there also was to be seen part of the stone, called the Angel's Stone. At the back of the sepulchre, on the outside, was the altar surmounted with a baldachin, called the altar of the holy sepulchre (*d*); but the most curious thing of all was a sort of ciborium above the sepulchre itself. It appears to have been made of the richest materials, and the dome, which was supported by twelve columns, was ornamented in the interior with mosaics on a gold ground. The same sort of decoration was also applied to the interior of the sepulchre, and we read of the stories of the entombment, the resurrection, and the ascension. As to the chapels of Calvary they still occupied an intermediate stage between the ground and the triforium, as they had done in the time of Constantine. The pilgrims entered and departed by means of the staircases at *g* and *k*.

Such was the Church of the Holy Sepulchre as built by the Crusaders, and such it substantially remained until the fire of 1808. A Greek architect was then called in, who appears to have encased the whole work in his own abominable architecture. Perhaps some day, if the various Christian sects can cease from quarrelling for a little while, we may indulge in a hope of its restoration, for in this case there is much to be hoped for and nothing to lose in that usually destructive process. Our forefathers, had they lived in the present church-building age, would certainly have perpetuated their remembrances of the most interesting building in the world, by erecting one church at least in their own country which should be a copy of it. Even we in our present utilitarian age do occasionally build churches where beauty and not the number of sittings is the great consideration. Why should we not, therefore, some day,—instead of doing the regulation long choir and narrow nave, timber roofs, with the consequent pinnacles, panels, and tracery,—for once make a copy, or rather a restoration (for it comes to this) of that edifice for which our ancestors were content to leave all, and often to die on the sands of Palestine?

W. Burges.

The Source of the Nile.—Captain Speke, is appears, announces that the great lake Victoria Nyanza is unquestionably the main source of the Nile. The discovery was made by descending from the lake instead of ascending the Nile, as heretofore.

CONSTRUCTION OF CHELSEA SUSPENSION BRIDGE.

At a recent meeting of the Society of Engineers Mr. Geo. Gordon Page read the following paper on this subject:—

The Chelsea Suspension Bridge, which has been opened to the public for the last five years, is a bridge remarkable in many respects; and which, in point of design, mode of construction, and economy of cost, presents features of great interest.

In the year 1846 an Act of Parliament was obtained, and the necessary funds granted for the construction of this bridge, which forms a communication between Pimlico, Belgravia, and Chelsea on one side of the river, and Battersea Park and the surrounding neighbourhood on the other.

In addition to the design for the suspension bridge the engineer, Mr. Page, was instructed to prepare, for the consideration of the Metropolitan Improvement Commission, designs both for a bridge of seven arches, faced with stone, and one in cast iron of five arches; but, ultimately, the Chief Commissioner of her Majesty's Works decided to carry into execution the suspension bridge originally mentioned in the Act.

* * * *

General Dimensions.

The length of the Chelsea Bridge is 704 feet from face to face of abutments: it consists of a centre opening of 333 feet, with two side openings 166 feet 6 inches each. The piers are 88 feet long, and 19 feet wide, terminating in curved cutwaters: the piers are carried to aheight of 7 feet 6 inches above high-water mark: the width of the bridge is 47 feet: the roadway at the centre of the bridge is 24 feet 6 inches above high-water, and has a curve of 18 inches rise, commencing at the abutments. The towers and ornamental castings are of cast iron. The girders and flooring of the platform are of wrought iron.

Of the Abutments.

Too much attention cannot be bestowed on the abutments of a suspension bridge, as on their careful consideration and construction so much depends.

The abutment is the mass of masonry, or in some cases of natural rock, to which the extreme ends of the chains are made fast, and by the weight of which the strain from the chains is resisted.

The principles of the stability of the abutment of a suspension bridge are the same as those of the abutment of an arched bridge, but reversed.

In the former there is a tendency to upset or slide forward instead of backward, as is the case in the latter. The weight or gravity of the abutment should always be sufficient to prevent it from sliding on its base, and its form and dimensions should be sufficient to prevent it from upsetting. The tendency to sliding forward may be considerably lessened by making the base of the abutment, or a portion of it, slope so as to be at right angles, or nearly so, to the resultant of pressure.

Of all parts of a suspension bridge the abutments are the last in which solidity and stability should be sacrificed to motives of economy.

The weight of the abutment should be equal to resisting twice the utmost strain that can be brought upon the chains by dead weight; and the total power of resistance, combining the weight and the tendency of the abutment to slide from the ground on which it stands, should be at least equal to four times the utmost strain that can be brought upon it.

The resistance offered by the adhesion of the abutment to the ground on which it stands depends entirely upon the nature of that ground, and cannot by any general rule be accurately predetermined.

When piles are used in the foundation they should be driven at an angle approaching as near as possible to the direction of the resultant of pressure.

With regard to the saddles on the abutment, by the aid of which the direction of the chains is changed, it is not always necessary to place rollers under them; but, as they must be capable of sliding to a sufficient extent, other means are sometimes resorted to in bridges of short span, and the saddles are sometimes laid on a bed of asphalted felt. In large suspension bridges rollers are, however, universally used, to allow for the expansion and contraction of a necessarily large extent of chain.

As it is most important that the chains or wire cables of a suspension bridge should be kept free from rust, the tunnels in the abutment through which the chains pass down to their fastenings are generally constructed of such dimensions as will allow of space for access for the purposes of examination and repair if required.

The abutments of the Chelsea Bridge consist of a mass of brickwork and concrete, measuring at the base 112 feet in length by 56 feet broad, and at the top 100 feet by 46 feet, and 40 feet deep.

The face of the abutment adjoining the river is composed of cast-iron piles and plates, somewhat similar to those of the pier, with the exception that the ironwork is not brought above the level of low water.

The portion of the abutment on which the land saddles and cradles bear, for changing the direction of the chains, rests upon timber piles, 14 inches square, driven deep into the bed of the river, and are from 3 feet 2 inches to 4 feet from centre to centre. These piles are cut off at the level of low water, 16 feet below Trinity high-water mark, and the spaces between filled up with hydraulic concrete. The cast-iron and timber piles are tied together with wrought-iron ties, 3 inches by $\frac{3}{4}$ inch. On the top is bedded a series of landings, forming a table at the level of low water 53 feet 6 inches by 27 feet by 6 inches, upon which a mass of brickwork is erected up to a mean level of 3 feet below the level of the roadway. Upon this 12-inch landings are bedded for the reception of the cradles which carry the saddles on rollers. The cradles are bedded in asphalted felt, and firmly secured by wrought-iron holding-down bolts, brought up through the masonry from below. An invert, springing from beneath each saddle, is built in the brickwork below, so as to distribute equally the pressure from the cradles over the whole area of the foundation.

The mooring-chains are carried down tunnels to the moorings, the tunnels forming an angle of 155 degrees with a horizontal line. The chains are secured to massive cast-iron mooring-plates, resting against three courses of 12-inch landings, respectively 12 feet by 8 feet 9 inches, 16 feet by 12 feet 6 inches, and 20 feet by 16 feet 3 inches. The tunnels are contracted at the bottom by elliptical brick domes, thus affording a complete bearing for that portion of the landings at the end of the tunnel. These landings rest against a mass of brickwork, with inverts, to distribute the pressure over the whole area of the abutment. This mass of brickwork rests on a series of timber piles, driven at the angle of 65 degrees with a horizontal line; the tops of the piles coming up above the level of the concrete, struts, and ties, and having a good bond with the brickwork, by which means the tendency to slide is greatly diminished, the whole space between the masses of brickwork being filled up solid with concrete.

The Pier Foundations.

The construction of the foundations of the piers combines all the advantages of foundations on bearing piles, made by means of coffer-dams, without the expense and obstruction to the waterway which they involve, and which would have rendered their use at Westminster Bridge all but impracticable.

The foundations of the piers consist of timber-bearing piles, 14 inches square, driven deep into the bed of the river at intervals of 3 feet over the whole area of the pier, varying in depth from 40 feet 6 inches to 25 feet below the level of low-water, according to the resistance offered by the bed of the river.

The face or external surface of the piers consists of a cast-iron casing of piles and plates driven alternately. The main piles are 12 inches in diameter and 27 feet long, with longitudinal grooves on each side for the reception of the plates. These piles are driven to a uniform depth of 25 feet below the level of low-water, and between them are driven cast-iron plates or sheeting 7 feet 2 inches wide, so that the pier is entirely cased from the foundations to the top, which is 7 feet 6 inches above Trinity datum. The space inclosed by this casing is then dredged to the hard gravel above the clay, and filled in solid with concrete up to the level of the top of the timber piles. On this foundation a flooring of stone landings is bedded, and on this the cast-iron plates, frames, &c., forming the base of the towers, are placed.

The portion of the caisson situate above low-water is hollow, being so formed to avoid throwing useless weight on the foundation, and is merely lined with brickwork, strengthened by cross walls and iron ties.

The whole of the ironwork below the water was covered when hot with a protecting coating of tar. The thickness of metal in the caisson is 1 inch.

Of the Towers.

The towers which support the chains are entirely independent of the ornamental cast-iron casing surrounding them, and consist of a cast-iron columnar framing strongly braced both horizontally and vertically, carried to a height of 57 feet above high-water.

The columns are cast in pairs, and have a diameter of 10 inches, and thickness of metal 1 inch. They are arranged in clusters of fours, and the whole are connected with six horizontal frames, occurring at intervals. The columns are not vertical, but incline towards each other upwards from either side of the pier, the columnar framing being 13 feet 6 inches at the base, and 9 feet 9 inches at the top. In the direction of the piers the columns are 4 feet 3 inches apart, and rise parallel to each other. There are two towers on each pier, 32 feet from centre to centre. The pressure from the chains coming directly from their centre, each tower carries therefore one-fourth of the whole weight of the bridge, or about 375 tons, or about 670 tons when the bridge is completely loaded: the sectional area of the columns is 284 square inches, and there is, therefore, a pressure upon them when the bridge is loaded of 2·36 tons per square inch of section. The weight of the towers, exclusive of the ornamental cast-iron casing, is 350 tons.

On the towers are fixed massive cast-iron cradles upon which the saddles rest.

Of the Platform and Roadway.

The roadway platform is carried by two longitudinal trellis girders, running the whole length of the bridge from abutment to abutment, immediately beneath the chains, by which they are supported at intervals of 8 feet. These girders are suspended from the chains by wrought-iron rods 2 inches in diameter.

The weight of the roadway is distributed over the whole of the four chains by the coupling plates to which the rods are attached: the rods are jointed at the chains and at the roadway to accommodate any lateral motion that may occur, and are provided with screw coupling-boxes for their adjustment: the suspension rods pass through the longitudinal trellis girders, and support them from beneath.

The transverse girders which support the roadway are placed 8 feet apart from centre to centre, immediately under the suspension rods, and bear upon the bottom flange of the longitudinal girder; are 31 feet 10 inches long, 2 feet 2½ inches deep at the centre, and 1 foot 11 inches at the ends, where they are connected by a system of riveting with cantilevers 7 feet long, which practically form a continuation of them, and serve to support the overhanging footpaths: the sectional area of the top and bottom flanges is 10 inches, and the vertical rib ½ inch thick, stiffened with T-iron.

The small roadway bearers between the transverse girders are from 3 feet 3 inches to 3 feet 10 inches apart, 8 feet long, and vary in depth from 1 foot 5¾ inches to 1 foot 9½ inches, to suit the cambered surface of the roadway.

The several girders that support the roadway thus form a series of rectangular cells, which are covered with arched plates of wrought iron, stiffened with angle iron.

The haunches of the plates are filled in with a light concrete, composed of cork and bitumen. Previous to laying the bitumen concrete, the plates and girders are coated with asphalte.

The roadway is paved with oak blocks, 6 inches by 3 inches by 4 inches, bedded in bitumen, and trams of timber, flush with the roadway, with wrought-iron strips bolted down on the top for durability.

The preference was given to the cork and bitumen concrete as a bedding for the roadway blocks, on account of lightness compared with ordinary concrete. Concrete, moreover, in such a position, and in so thin a layer, is liable to crack, and become in time pulverised, and (then no better than loose gravel) liable to be deranged by passing traffic.

The footpaths are paved in the same way, only the blocks are of smaller dimensions. This pavement rests on planking placed on joists running longitudinally, resting on the cantilevers. The available breadth of the carriage-way is 29 feet, and footpaths 14 feet 4 inches.

The longitudinal trellis girder is 6 feet deep, and its flanges are composed of a top plate 10 inches by 1¼ inch, and two angle irons, 3½ inches by 3½ inch by ⅝ inch thick: the effective area of the top and bottom flanges is 12½ square inches.

This girder materially stiffens the roadway, and prevents, in a great degree, that undulation to which suspension bridges are liable.

The handrail is of wrought iron, secured to the cantilevers at every 8 feet by brackets. The ornamental bosses and stays for supporting the railing are of cast iron.

The Chains and Saddles.

The chains of the Chelsea bridge are four in number, two being placed on either side, at a distance apart of 32 feet. They consist of links of seven and eight bars alternately, 8 inches wide, and of lengths varying from 16·55 feet at the towers to 16 feet at the centre of the span, so as to admit of a uniform horizontal distance of 16 feet from centre to centre of the pin-holes of each link, and are connected by pins 4 inches in diameter. The aggregate section of the four chains at the towers is 230 square inches, and at the centre 217½ square inches. The span of the centre opening is 348 feet, and the deflection of the chain is 29 feet. The semi-span of the back chains is 183 feet, and the deflection 30 feet 6 inches. The length of the chain for the centre opening is 354 feet 5 inches, and the length of each of the back chains 186 feet. The mooring chains are placed at an angle of 25°, and are 95 feet long, and have an aggregate section of 235 square inches. The total weight of the chains is 340 tons. The chains are carried over the towers by means of saddles formed of No. 8 1-inch wrought-iron rectangular plates, 5 feet 8 inches long, and 2 feet 10 inches wide, placed at intervals of 1 inch apart, and bolted together by No. 10 bolts. The bottom edges of the plates are planed, and are let into a cast-iron plate 4 inches thick, also planed on its top and bottom surface, and which moves on ten 6-inch diameter steeled rollers, working on the cast-iron bed-plate fixed at the top of the towers. The chains are connected to the saddles in the same way as the links of the chains are connected together. At the abutments the chains are diverted down the tunnels by means of saddles of similar construction to those on the towers, based on cast-iron cradles, and placed at right angles to the resultant of the strains.

For mooring the chains the following means were adopted:—As has been observed in the description of the abutments, the tunnels for the mooring-chains are closed at the bottom by elliptical-shaped brick domes, against which the York landings are placed at right angles to the angle of inclination of the mooring-chains. The chains pass through holes formed in the centre of the landings (the dimensions of the landings were stated in the description of the abutments). A brick semi-circular arch or invert springs from the outer face of the landings, and connects the two sets of landings of each abutment together, by which means the whole weight of the middle portion of the abutment, it will be seen, is made to resist the pull of the chains. The chains are secured by means of castings, 21 inches deep, abutting against the landings, and are divided, each into four compartments, rather more than 2 inches wide, through which the chain-bars (here put two and two together) pass, and are moored by keys driven through the heads of the bars, and bearing against the mooring castings. Keys were here used instead of pins, to allow of an adjustment in the length of the chains. Similar means for adjusting the lengths of the chains were made at the saddles on the towers, but were not needed.

In calculating the length for the chains the curve may be assumed to represent a parabola, though, strictly speaking, the curve of the chains is peculiar to the construction; but, deduction being made for the stretch due to the tension caused by the appended weight, the weight so deducted will be found practically correct. Care should be taken to ascertain the exact distance of the span, as a small error in the horizontal distance will cause a serious error in the amount of deflection. It is well to provide for any discrepancy of this kind by leaving the centre links of the chains the last to be rolled; when, the error being known, it can be rectified without any serious interference with the rest of the construction.

For the erection of the chains four temporary chains were thrown across, made of 2-inch round bar-iron, and placed one on each side of the line of the chain to be erected. Upon these temporary chains travelling purchases worked, by which the bridge chains were hoisted and put in place. Four other and similar chains were thrown across beneath the former mentioned ones, to which timber platforms were suspended, and which served to carry the bars of the chains until the connexion of the links was complete. In the hope that the description may be acceptable, a few observations are subjoined respecting the manufacture of the bars.

The bars for the chains of the Chelsea Bridge were manufactured by the process patented by Messrs. Howard & Ravenhill, by which the head and body of the bars are rolled of one piece, and was effected as follows:—Piles, or, as they are technically called, balls of cleansed scrap iron, of about ¾ cwt. each, were heated (eighteen balls being the usual charge) in a reverberatory furnace of ordinary construction, and afterwards hammered into slabs about 2 inches thick by a 4-ton wrought-iron hammer. The slabs, while still hot, were then piled in sets, of the weight required for the respective bars, and again heated and hammered into oblong masses of iron called shingle, somewhat wider than the width for the bars, and about 2 feet 9 inches long. The time required for heating the balls of scrap was one hour and a quarter; that is, so much time elapsed from the time of charging the furnace to the withdrawal of the first ball; and the time required for hammering the eighteen balls into slabs was three-quarters of an hour. It may therefore be observed, that the last ball withdrawn was nearly twice as long in the furnace as the first ball was; and it may, consequently, be supposed that some of the balls of scrap were too much and others too little heated; but the precautions adopted in the management of the furnace prevent any great irregularity in this respect. The balls first withdrawn were placed nearest the furnace; and, as withdrawn, the remaining balls were pushed nearer the furnace, or otherwise, as their state required. The time for hammering a pile of slabs into shingle was about five minutes. By the two heats and hammerings the loss of iron was about 13 per cent.; and after the shingle was rolled into bars the total loss of iron was 20 per cent.; that is, the bar weighed one-fifth less than the scrap iron weighed from which it was manufactured. For converting the shingle into bars of the required form the shingle was heated to the required temperature in the furnace of the rolling-mills, and was then passed longitudinally through rollers till reduced to a width of 8 inches, and to a thickness of 2¾ inches. It was then transferred to other rollers, and passed through sideways; these rollers being so constructed as to act only on the extremities of the bar, which, by this means, were spread out to the width required for the heads. The bar was then passed again longitudinally through ordinary rollers, till reduced to the length and thickness required; after which, while still hot, it was straightened by being beaten with wooden mallets. The time required for rolling a shingle into a bar was eight minutes.

The next process was boring the pin-holes. In doing this the bars composing each link were placed one on another, and bored by one operation, by which means uniformity of length was obtained. Shearing the heads of the bars to the proper form was the next operation. To do this the bars were fixed eccentrically on a table revolving in contact with shears, which, as the table turned, cut off the superfluous portions of the heads.

Every bar of the chains at this stage was tested with a strain of 13½ tons per square inch; the contract requiring, in order to insure material of the best quality, that the iron used should stand this strain without a permanent elongation of more than one-fortieth of an inch in a ten-feet length; it having been found from experiments made that up to this strain the best commercial iron did not extend more than the very best iron that could be manufactured. It may be observed, that notwithstanding this amount of strain very few of the bars had to be rejected.

The last process in the manufacture of the chains was numbering the bars and lettering the links, that there should be no mistake in erecting the chains, as to every bar being in its proper place. A few words will suffice to explain how this was carried out. The chains were divided into eight portions, and named A, B, C, D, E, F, G, H, respectively. The chain A extended from the moorings on one side to the centre of the bridge, where it was joined by the chain B, which continued to the moorings on the other side, and so of the other three remaining chains. The heads of every bar of every link were then stamped with the letter of the chain to which it belonged, and numbered; the heads of the first links at the moorings being numbered 0, and the heads at the other extremity of these links 1. The heads of the second series of links were numbered 1 and 2; of the third series 2 and 3; and so on throughout the whole length of the chains. The bars of every link were also numbered 1, 2, 3, 4, 5, 6, 7, 8, showing the position they occupied in the link during the operation of boring.

The engineer considered it highly advantageous to the successful completion of this

part of the bridge that the chains were prepared by Messrs. Howard, Ravenhill, & Co., who spared no pains and no expense to carry out his instructions to produce a perfect structure; and so far from their making any attempt to evade any condition of the contract for their own advantage, the perfection of the work was their chief consideration.

It will show the excellence of the iron they produced to state that whereas the late Mr. Barlow deduced that the stretch of iron was at the rate of one-ten-thousandth part of its length for each ton, the iron which Messrs. Howard, Ravenhill, & Co. produced for the chains of the bridge only stretched from one-fifteen-thousandth to one-fourteen-thousandth part of the length per ton, being above fifty per cent. less than Mr. Barlow's.

As so much depends upon an honourable contractor in the execution of a work, Mr. Page authorised me to make these observations in justice to Messrs. Howard, Ravenhill, & Co.

Of the Probable Load.

Before considering the degree of strain to which the chains are liable, it would be well to investigate the amount of load to which a bridge may be subjected.

M. Navier, a great authority on suspension bridges, calculated the load likely to occur on a bridge at 42 lb. per square foot. The standard proof for suspension bridges in France is 200 kilogrammes per square mètre, which amounts to 41 lb. per square foot, the proof load required by the French Government.

For troops on march, 21 inches in rank and 30 inches in pace are allowed, giving 4·37 superficial feet per man; which, at 11 stone each, would be 35¼ lb. per square foot.

The load taken in the calculations for the Menai Bridge was 43 lb. per foot super.

An experiment was made by the engineer of the Chelsea Bridge, by packing picked men on a weigh bridge, with a result of 84 lb. per superficial foot; but it is not within the limits of probability that such a crowd could accumulate on any bridge.

Seventy pounds per square foot of platform are assured as a standard for the load that may come on a bridge; as being the utmost load that the platform could hold; supposing it, in fact, quite filled with people crowded as close together as they could be. This, it is true, is not often likely to happen; but it may do so on a public occasion; and needs, therefore, to be provided for.

The march of cavalry, or the passage of cattle, is not so productive of dangerous effects as troops on the march, inasmuch as cavalry take up more room in proportion to their weight, and do not preserve a uniform pace.

As regards the greatest moving load or crowd, it is an acknowledged fact that it is impossible for a body of people on the move to occupy per man less space than trained troops; and as I have before shown that troops on the march do not produce a greater dead weight than 35¼ lb., one may safely assume that the dead weight due to a moving crowd will not amount to so much.

Of the Strain on the Chains.

Having described the various loads that may come upon a bridge, it may be useful to show the strain produced on the chains of the Chelsea bridge under the several circumstances.

The strain on the chains from their weight alone is $1\frac{1}{10}$ ton. The strain from the weight of the platform and road alone is 3·32 tons, giving a total strain produced by the structure alone of 4·42 tons or 9·08 tons below the proof strain.

The strain on the chains from the weight of the structure and a load of 70lb. (being the weight per square foot of a dense crowd) is 7·60 tons—or 5·9, nearly 6 tons, below the proof strain; so that the chains will carry in addition to the weight of the structure nearly three times the greatest crowd that can come upon the bridge, before the proof strain is arrived at. Taking the breaking strain of the chains at 28 tons, we should require seven and a-half times the greatest possible load to be brought on the bridge to produce that strain.

Before concluding these observations on the Chelsea bridge it may be interesting, without taking into consideration the high quality of the iron, to compare the strain on the chains with other suspension bridges; and for this purpose I may refer to the Hammersmith and Pesth bridges as fine examples of bridge engineering; both being built by the same engineer, Mr. Tierney Clarke, at distant intervals; the Hammersmith bridge having been open thirty-six years, and the Pesth fourteen years.

The Hammersmith bridge is 710 feet 8 inches between abutments, the span of the main opening is 442 feet 6 inches, the deflection is 29 feet 6 inches, the useful width of platform is 30 feet, the sectional area of the chains is 180 square inches, the weight of a square foot of road 63 lb., and the strain per sectional inch upon the chains from a load of 70 lb. is 8·86 tons; the chains were proved up to 9 tons, leaving a margin of 14 tons between the proof strain and the strain from the greatest load.

The Pesth bridge is 1,262 feet, between abutments, the central span is 666 feet; the deflection of the chains is 47 feet 6 inches, or 1-14th of the span; the available width of roadway is 36 feet 3 inches; the weight of a square foot of suspended roadway is 74 lb., and the chains have a sectional area of 510 square inches.

The strain produced on the chains with a load of 70 lb. per square foot is 7·72 tons, or 1·28 tons below the proof strain, all the bars having been proved up to 9 tons.

The margin or allowance between the strain from the greatest load and the proof strain is therefore as follows:—

Hammersmith Bridge	·14 tons.
Pesth Bridge	1·28 tons.
Chelsea Bridge	5·9 tons.

COMPETITION FOR A NATIONAL MONUMENT, TO BE ERECTED AT GENEVA.

PREMIUMS are offered for the best designs for a monument in commemoration of the Re-union of the Republic and Canton of Geneva with Switzerland; and the competition is open to artists of all countries.

The conditions say, *inter alia*:—This monument, architectural or sculptural, should characterize the Re-union of the Republic and Canton of Geneva with the Swiss Confederation. It will be erected on the Triangle, near the bridge of Mont-Blanc, on the left bank of the Rhone, according to a plan which may be seen at the Swiss Consulate. The competitors are to send designs or models carefully wrought, and an approximate estimate of its expense, by the 31st of July, 1863, at latest, to the Electoral Building, addressed to General Dufour, president of the committee. Their carriage to Geneva will be paid by the committee.

At the expiration of the competition the designs or models will be publicly exhibited for ten days.

The author of the design placed at the head of the list by the committee will receive a prize of 2,000 francs; the author of that placed second, a prize of 1,000 francs. These two designs will remain the property of the committee.

We have been requested by the committee at Geneva to give this information, and willingly do so; but English artists have heretofore received such scant justice in foreign competitions that the committee must not expect that many of our sculptors or architects eminent in their profession will submit designs.

WORK AND WAGES FOR THE UNEMPLOYED COTTON SPINNERS.

MR. RAWLINSON, as the Government engineer specially appointed to procure profitable work for the unemployed in the cotton districts, has recently sent in his first report to head-quarters, after having visited and inspected Ashton-under-Lyne, Blackburn, Dukinfield, Oldham, Glossop, Rochdale, Stockport, and seen or communicated with the local authorities of Accrington, Burnley, Bolton, Bacup, Chorlton, Criston near Preston, Denton near Manchester, Over Darwen, and Wigan.

Of the six principal places surveyed, five, he states, may probably expend in the whole 300,000*l.*—that is to say, in the market town and borough of Ashton-under-Lyne, 40,000*l.* for various works mentioned in the report; Blackburn, 70,000*l.*; Oldham, 100,000*l.*; Glossop union, 20,000*l.*; and Rochdale, 70,000*l.* The sum which may be advantageously disbursed for public works in Stockport is not stated, because the question of employing the adult factory hands now out of work there is still under the consideration of the town council.

There is much good work upon which the male factory hands can be employed; and, as Mr. Rawlinson says (and we had said before), "the present system will ruin the men if persevered in over another year," as "relief to able-bodied men is ever demoralizing." Leaving out Liverpool, the distressed unions are now spending about 11,000*l.* a week in out-door relief. The proposed expenditure in the five towns named, assuming that it could be made available at once and to the full amount in wages to the operatives, would be equal to the total out-door relief for the next seven months. "There are," as Mr. Rawlinson remarks, "difficulties to be overcome, but most of these difficulties rest with the local authorities. But a vast amount of useful work may be beneficially undertaken and executed by the best of the distressed men out of employment. . . . . Any loss in the work in the first instance will be more than made up to the locality in the saving of the poor-rate." He has made arrangements for obtaining more detailed estimates of works which may be undertaken in the several towns, and has offered his services to (as far as possible) advise the local surveyor, in each case, as to works.

Mr. Rawlinson has naturally confined his suggestions and inquiries to engineering works. Besides these, Lancashire presents a very broad area for agricultural improvements, by the drainage of moss lands and hill districts, and reclaiming waste land. There is no novelty in employing the surplus labour of Lancashire in such enterprises.

The Corporation of Blackburn has, we now learn, adopted a memorial to the Government, praying that the necessary steps may be taken, "by legislative enactment or otherwise," for enabling the borough to borrow 70,000*l.*, at a low rate of interest, in order that the local authorities may at once proceed with the execution of public works of utility, and thus give employment to the large number of cotton operatives who are now supported either out of the poor-rates, or by public benevolence.

TRACES OF LAKE DWELLINGS AND SORCERY HALLS IN SCOTLAND.

THE SCOTTISH SOCIETY OF ANTIQUARIES.

AT a recent meeting of the Society of Antiquaries of Scotland the following communications were brought before the members:—"Notice of the Vestiges of two Crannoges in a Loch at Kilravock, Nairnshire, with Plans." By John Grigor, M.D., Nairn. "The Loch of the Clans" referred to in Dr. Grigor's paper has been drained, and is now mostly a marsh. In the course of agricultural operations, remains occurred of beams of wood, disposed in such a way as to suggest their having at one time formed part of a palisaded inlet. A canoe was formerly found in the same neighbourhood; and, more recently, portions of bone, flint flakes, part of a stone cup, and an iron hatchet have been picked up. The same loch contains the remains of what is believed to have been another crannoge; and in some adjoining lochs similar traces have been noticed. Dr. Grigor hopes to report the result of more detailed examinations ere long; and in the meantime his paper was received with much interest by the Society.

"Notice of an Underground Chamber in the Parish of Alvey, Inverness-shire." By Sir David Brewster, Knt. The underground chamber in question is of the form of a horse-shoe, and has a smaller one entering from it. The large chamber on the convex side measures 86 feet. The walls are about 7 feet in height: they converge gradually from the bottom till they are covered in by large flags on the top.

Mr. Stuart pointed out the similarity between this cave and the "eirde houses" in the upper part of Aberdeenshire, as well as in other parts of Scotland, and the difference between them and the chambered abodes in Sutherland, Caithness, and Orkney; suggesting that, by the accumulation of such descriptions as the present, we might be able to classify these structures according to the districts of the country in which they occurred.

GATEWAY AT THE SULTAN'S NEW PALACE, ON THE BOSPHORUS.

IN our volume of last year* we gave some particulars of the Sultan's new palace on the Bosphorus. In a previous number we published a view of the building. We now add a view of the great gateway of the enclosure, designed by Mr. Balzan, an Armenian architect. The capitals and the foliage at the base of the columns are of metal, bronzed: the rest of the structure is, we believe, of marble: the gates themselves are of cast iron. The drawing we have engraved was made from one of the admirable photographs produced by Mr. F. Bedford, while professionally accompanying the Prince of Wales in his Oriental tour.

* Vol. xx., p. 631 ("Architectural Photographs"), and p. 699 ("Modern Architecture in the East").

GATEWAY AT THE SULTAN'S NEW PALACE ON THE BOSPHORUS.—MR. BALZAN, ARCHITECT.

EXHIBITION OF DESIGNS FOR FREEMASONS' HALL.

NINETEEN or twenty designs for the buildings intended to be erected in Great Queen-street, by the Freemasons, or for additions to the existing hall, have been received in competition, and have been on view during the past week in St. Martin's Hall, Long-acre. Knowing the problem in this case submitted to our profession, to be one of some difficulty, we applied in due time, for permission to see the drawings prior to their public exhibition. Our application, however, could not be acceded to; and the result is that we are not able to give to the subject the complete notice which we believe would be deserved.

The object in view was stated in the printed "instructions" or particulars, to be the provision of "a suitable Temple or Hall for Freemasonry," to include accommodation for the Grand Lodge, for the Grand Master and Executive Officers, and for private lodges and the craft. The *hall* proper, and the apartments and offices, were to be adjoining each the other, and to have convenient internal access to a tavern of the first class, as the case is at present; whilst in other respects, the two buildings, or parts of the whole, were to be distinct and separate. The ground shown by one of the plans furnished, at a stated charge, to intending competitors,—and which plans should have been exhibited at the commencement of the week, with the competitors' drawings, to admit of the case being understood by visitors at that time,—is described as about 194 feet in depth, and about 132 feet in length. This ground would include the site of the present tavern, that of the Grand Secretary's Offices east of it; the *hall* proper, forming the back of the tavern; and additional space which has been obtained to the west. The "hall" (illustrated in Britton & Pugin's "Public Buildings of London") is used as well for gatherings of the craft, as for public dinners in connexion with the tavern, as most Londoners are aware. It measures 92 feet by 38 feet, its longer axis running north and south, but not exactly in the centre of the ground. It is important to note that this hall is intended to be preserved; whilst another hall capable of providing for 450 to 500 persons at dinner, and with a gallery for 150 spectators, is contemplated as part of the new tavern-building. Light from the exterior of the ground is obtainable only from Great Queen-street and from Middle-yard. The printed particulars represented that it was "considered very desirable, but not imperative, that the portion westward" of the present *hall* (or the new ground), and the *hall* itself, should "be applied exclusively for the purposes of Masonry;" and further, it was said that the façade representing Freemasons' Hall, which was to be of Portland stone, and of a plain but elegant character, should extend in length to the east wall of the great hall, or about 89 feet, presuming the offices placed west, or about 88 feet should these Masonic offices have the east side of the property appropriated to them. The present tavern, together with the portion eastward of it, and now used as offices and including the Temple,—in all about 85 feet in length,—is elsewhere distinctly required, with the exception of the *façade* and such rooms therein as may be appropriated to Masonic purposes, to be occupied by additions and alterations to the tavern, and to be separated from the Masonic portion. These several "instructions" have sufficed to lead most of the competitors to place the tavern as "considered very desirable," and therefore the new banqueting-hall appertaining to the tavern, in the narrower of the two spaces, parallel with the hall, that were open for selection. The difference, in that rearward portion of the ground, is said to be some feet more than the statements of figures of the frontage would show. It is obvious that the difference, whatever it is, is important: for, the question is of seating 450 people at least; and for this object, not an inch of ground is to spare. The portion of the frontage appropriated to the tavern, about 43 or 44 feet in length, was to be distinct in character from the Masonic building, and plain. It might be of brick with stone dressings. Some of the competitors, however, have offered designs bringing the whole frontage into one composition.

Some of the number, but we think a small minority, have arranged the plan with the offices in their present position, or to the east, appropriating the new ground, west, to the tavern. This arrangement has several advantages beyond the one already adverted to. It is important to note as an object which there is in addition to that of preservation of the "hall," the desirableness that the work should be "so arranged as to admit of being carried out with the least possible interference to the business of Grand Lodge, or that of the tenants of the present tavern," and that "in every case where parts of the present building can be conveniently appropriated, they are to be so converted as to form part of the new buildings." All these objects can best be attained by devoting the new or western ground to the tavern. The arrangement is adopted in a design marked 100, which treats the centre, the offices, and the tavern, in the front, in some measure as distinct buildings. They are shown in a boldly-drawn perspective view. The design, of an Italian character, has some features of detail which are good as well as novel. A similar arrangement of the hotel is found in a design marked ⊙, which is also of Italian character, though very different to the last. Again, the author of a design marked with two intersecting triangles coloured red and blue, shows the arrangement as an alternative. In fact, he shows at least the two arrangements of plan, and an elevation which could be equally adapted to the western or to the eastern principle, if we may so speak, of distribution. Besides skill in the planning, there is much freshness as well as taste in the design of the exterior in this set of drawings. It is of Renaissance character. The interior, however, is later Italian, still tasteful, but scarcely a judiciously chosen contrast. Some of the plans adopting the arrangement just mentioned, preserve the Temple—as they are able to do.

The Masonic requirements include a library, a coffee-room, grand secretary and clerk's offices, muniment-room, waiting-room, large committee-room, three offices for charities,—all these rooms suggested to be on the ground floor; and, further, they include the present *hall*; four lodge-rooms, each with an ante-room, having, where practicable, a small private room attached to it, but the small room not being a passage to the lodge-room; robing-room for the Grand Master, and one for Grand Officers; two or three small committee-rooms, should space allow; Grand Tyler's apartments, five rooms, in the basement; and other requisites. The tavern, already described as separated, generally, but required to have a good internal access provided from the Masonic portion of the building, is to include, besides the large banqueting-hall, a dining-room for 130 persons, one for 100, one for 50, and one for 20. The rooms known as the Sussex and the Cambridge; the Glee-room, and the Dining-room could be retained as dining-rooms in the tavern; and the present Clarence, with an addition, might be used as a coffee-room for Freemasons.

Premiums of 150*l.*, 100*l.*, and 50*l.*, were offered for the best designs, as our readers are aware; and three designs are pointed to as likely to receive the rewards. In the design with the motto "*L'Union fait la Force*," the tavern is placed to the east, and the Masonic portion of the building west. One part of the plan, the entrance, though treated so as to disguise the difference of centre between the corridor or hall of entrance, and the passage beyond it, and to that extent workmanlike, is in dimensions of doorway and its other features, altogether short of the requirements of the chief or only access to a building crowded on many occasions with persons entering. Several elevations, differing considerably, but all of Italian character, have been designed to the general plan here under notice. The design shown in the principal perspective view, having Salient columns the height of two stories to carry statues, is, of the lot, the least satisfactory to us. some of the elevations are beautifully-executed drawings. "Elevation No. 1" has the front, for the height of the principal stories, divided into three bays, by four bold rusticated piers. In each bay a species of loggia, with Corinthian columns, is formed; the window being set back. The entablature is common to the small order, and to the piers, which last have capitals ranging with the Corinthian capitals, and are terminated above the entablature by seated figures. These are in face of piers of an attic that terminates the building. The columns of the small order have vases over them. In the centre-bay, the cantilever-cornice which crowns the attic, is interrupted; and raking mouldings of a pediment are introduced. Beneath, is a semicircular window-arch—the archivolt carved with signs of the zodiac, the whole arrangement very difficult to treat efficiently. The banqueting-hall, seen internally, has a segmental ceiling divided by ribs, and the bays between them filled in at the haunches of the soffit with secondary ribs placed diagonally, and leaving on each side of the ceiling, a coffer, set diamond-wise, in which is a circular opening for admission of light. The drawing shows some good ornament in polychromy. The plan has several striking weaknesses scarcely to be got over.

In the design marked "Stability," the same position for the tavern is adopted. For the front, there are alternative designs, one an amplification of the chief part of the other. One of these makes the tavern-building subordinate in external character to the Masonic building: the other nearly duplicates the opposite end, and fills in a new centre. Taking the plan to be applicable to either case, the entrance is at the eastern extremity of the front of the Masonic building; and, in the more simple design, there is a window corresponding at the west,—so that the arrangement recalls that of the Conservative Club, with which building there are some other, though trifling, resemblances. The corridor of entrance leads into a grand saloon, or central hall, which is of the same family as that in the Reform Club, Bridgewater House, and other buildings of Sir Charles Barry; but the corridor enters it quite close to the angle. Otherwise there would be considerable effect in the steps up to the great hall, which occupy the whole width of the farther end; and from the galleries surrounding, on the first floor. Whether the saloon occupies space to the disadvantage of specified requirements, we cannot say: these questions are only to be answered by detailed examination, for which time has not sufficed. Skill, however, is shown in provision of the requisite areas for light. The banqueting-hall of the tavern, placed as we have said, west,—and which is raised some steps higher than the Masonic hall,—has a very effective interior: but the construction of the support for the roof, we find it impossible to understand; and no explanation is discoverable in the drawings. The ceiling is waggon-headed with semi-circular openings for light, groining in; and each half of this vault and the entablature from which it rises, is carried upon the farthest projected edge of a cove of no small dimensions. Along the sides of the hall are wide galleries on cantilevers. The street front, in each form of the design, would be an imposing structure of the Sansovino character of architecture, with the entablature-*cornicione* having the deep and richly-sculptured frieze pierced by oblong windows, a balustraded area, a continuous balcony with balusters and statues on the pedestals, and balusters to the roof. The arch-headed windows, with columns, in the first floor, between the masses of the angles, are well designed, and so are the open turrets, loggie, or belvideres with which the architect has crowned his angles. The author claims to have introduced each of the five orders somewhere in the front. In the expanded *façade*, central columnar features are more prominent, at least in the upper portion of the building.

In the design marked "Experientia," the hotel is still eastward, and treated as a distinct building externally. A *Rococo* character of Italian is observable in it. The plan, generally, seems to us made with superior knowledge of the site and of the Masonic as well as ordinary requirements; indeed, we suspect that if the eastward position of the tavern be decided upon, this plan will prove the best. The matter of lighting seems to have been properly studied. Decoratively, the design is unequal to that last mentioned. The four stories of columns and pilasters are, after all that can be said in praise of their treatment here, but commonplace; whilst the banqueting-hall shown in the view, with segmental ceiling rising from pilasters, or some other features placed in the upper part of the walls, is less satisfactory than the interior in several other designs.

Could we have given a longer notice, we might have entered into the merits of several sets of drawings. Amongst these designs is one marked "Ich Dien," wherein the Masonic hall is reached by a too circuitous route,—the result of making the entrance central in the Masonic building. It has a portico of six Corinthian columns between antæ, in the upper part of the front, darkening the windows of two stories, but otherwise skilfully designed, as are also two angle-turrets. In the same design, the banqueting-hall is disposed with columns, after the plan of nave and aisles, the central space being vaulted, and the sides flat-ceiled. The whole of each square space between beams, or ribs, is glazed; so that ample light is effectively introduced. Taste is exhibited also in polychromatic decoration. The design marked "Labor ipse voluptas," with a clever, somewhat Florentine, exterior, but heavy in appearance for London atmosphere; and designs marked "Concord," "Sic nos non Nobis;" and "Pour y Parvenir," might deserve to be looked into.

A number of letters and some personal statements show us that there have been conflicting

interests at work, antagonistic to that fairness in decision which a committee appealing to a profession owes to it. To this we may have to return.

The insertion of the following may be useful —

"SIR,—As the object of exhibiting the various designs for the proposed Masonic Buildings is, not only to enable the body of Freemasons generally to see the whole of the designs, but to form an opinion upon the three selected by the Committee, so that at the meeting of the Grand Lodge, on Wednesday next, the 3rd day of June, they may be prepared to give their assent or dissent to the Committee's recommendation,—it is desirable that their attention should be drawn to the plans bearing the following mottoes, which report says (whether correctly or not I do not pretend to say) appear upon those which have obtained the prizes:—

1. L'Union fait la Force.
2. Stability.
3. Experientia.

AN ARCHITECT."

Another writer says:—

"It is to be hoped that Messrs. Havers, Plucknett, and the other members of the committee, will state in their report the reasons for adopting a design which only furnishes a hall, 99 or 92 feet long, to hold 475 persons. 'Stability' meets the great difficulty of the instructions by a hall 122 feet long. The present hall, 78 feet long, hardly accommodates 300 persons."

GRANITE MONUMENT FOR STRATHFIELDSAYE.

AT the Penryn granite works of Messrs. Freeman, the memorial of the late Duke of Wellington intended for Strathfieldsaye is being proceeded with. The monument is to be in the form of a column, surmounted by a capital and statue of the great Duke in bronze, the whole being after a design by Baron Marochetti. The base will be 30 feet square, from which will rise three steps, 15 inches high, and 3 feet broad. In the centre of this will be placed the plinth, 12 feet square, and 6 feet high. Above this the polished granite work will commence, consisting of, first, a finely moulded base, 9 feet 8 inches square, and 2 feet 7 inches high: on this will be placed the die, an immense block of solid granite, 9 feet high by 7 feet square, weighing 40 tons. The four sides of this mass are to be panelled and moulded. Above this will be the cap, moulded, 10 feet 8 inches square by 3 feet in thickness. Above this will rise two blocking courses, on which will be placed a base of bronze; and from this will rise a monolithic column of polished granite, 30 feet long, 4 feet diameter at the bottom, and 3 feet 5 inches at the top, weighing 20 tons. It was obtained from one of Messrs. Freeman's quarries in the parish of Mabe, and is the largest piece of granite that has been worked in the kingdom. Four men were occupied during twelve weeks in rounding it, and nine weeks more have been occupied in polishing it. The column will be surmounted by the capital and statue in bronze. The former has been cast and sent to Messrs. Freeman, but whether the statue has been finished or not we cannot say.

LOCAL WORKS AT PRESTON.

IN reply to a letter from the Home Office with respect to the powers conferred upon local authorities under the Local Government Act, for works of local improvement, &c., a statement has been made by the Preston Corporation from which it appears that the cost of main sewerage works executed up to the present time amounts to 47,700*l.*; works now in progress and required, 2,800*l.*; in all, 50,500*l.* Of 16,000 houses in the borough, 12,800 have house-drains connected with the main sewers. These drains have cost 22,600*l.* or 1*l.* 15s. 4d. a house. The Corporation in 1854 purchased the waterworks at a cost of 135,225*l.* Since then they have expended 89,620*l.* in extension of the works. The water is of very good quality and is at all times under a constant and high pressure. The charges for the water are reasonable, and even in these depressed times the revenue is sufficient to pay all expenses and the interest of borrowed money. 15,790 private houses alone are supplied. During the last ten years the Corporation have sewered, levelled, paved, and completed 215 private streets, at a cost of 25,094*l.* repayable by owners. Thirty private streets are now being sewered and made good. The Corporation have expended upon Avenham Walks and Avenham Park about 3,000*l.*, exclusive of the cost of land. They have also expended about 7,000*l.* in the walks, roads, grounds, plantations, and other works on the moor. Upwards of 1,000 men are now employed in forming and levelling the land for a cattle market, &c. The same number of men are employed in levelling land for building purposes. The Corporation are erecting a new town-hall, at a cost of 40,000*l.* from designs prepared by Mr. Scott. Employment is thus provided for a considerable number of workmen.

SURREY COUNTY HOSPITAL.

THE committee of the Surrey County Memorial Hospital have determined upon proceeding without delay with the building, which is to be erected on a plot of ground presented by the Earl of Onslow, on the slope of the Hogsback, close to the town of Guildford. In answer to the advertisements for tenders the following were sent in:—

Barnes (accepted)	11,303	0	0
Matthews	10,629	0	0

The committee have accepted the lowest tender but one—that of Mr. William Barnes, of Nutfield, Redhill, for 11,303*l.* At present the committee have only money in hand and promises to the extent of about 7,300*l.*, which includes 500*l.* offered by a gentleman on condition that two like sums should be contributed, which offer has not yet been responded to. Under these circumstances the committee reserve to themselves power to stop the further progress of the works after the building has been roofed in. The committee explain the great excess over the originally intended outlay by saying it includes a handsome boundary-wall round the whole two acres of ground, with carriage entrances; Parian cement to all the internal walls of the wards; plate-glass windows; an additional floor in the roof, adopted at the Earl of Onslow's suggestion, and for which his lordship will pay; the application of Fox & Barrett's principle, which will render the building fireproof; a hot-water supply over the whole of the hospital; a well, with an engine and pump, tanks for rain water, and fittings of every description. The quantities were furnished by Messrs. Hunt & Stephenson and Messrs. Meakin & Dudgeon. Mr. Edward W. Lower is the architect.

CONTRACTORS' LIABILITY FOR NEGLIGENCE.

A QUESTION whether contractors or employers were liable for negligence occurring in the course of work was raised in the case of Dray *v.* Pullen, in the Court of Queen's Bench. The owner of premises within the district of a local board of works having been ordered to abate a nuisance existing thereon, employed a contractor to do the necessary works. In the course of their execution a trench was dug across a public highway, under the powers given by 18 & 19 Vict., c. 120; and after their completion, owing to this trench not being properly and sufficiently filled up, the plaintiff, passing along the highway, fell into it and was injured. The Court held that the contractor only, and not his employer, the owner of the premises, was liable, notwithstanding the provisions contained in sect. 110 of the above Act.

SCIENCE EXAMINATION OF THE SCIENCE AND ART DEPARTMENT OF THE COMMITTEE OF COUNCIL ON EDUCATION.

THE annual May examinations of the pupils of science schools and classes by the Department of Science and Art have just terminated, and the result shows an increase in the number of centres of examination and the number of pupils who have come up to be examined; although in some subjects there has been a decrease as compared with last year. In geometrical drawings the number of pupils examined in 1862 was 119, but this year they had increased to 289. In machine drawing the number has increased from 70 to 194; and in building construction there has been an increase from 45 to 107. In theoretical mechanics there has been a falling off from 52 pupils to 35; and in applied mechanics the decrease is from 47 to 22. The experimental sciences appear the most popular. In acoustics, light, and heat, there is an increase from 47 to 121; and in magnetism and electricity the increase is from 105 to 207. Inorganic chemistry shows an increase from 558 to 679, and organic chemistry an increase from 105 to 157. The centres of examination have increased from 54 in 1862, to 71 in 1863; and the number of pupils examined in the different subjects has increased from 1,943 to 2,672. These figures only give an approximate estimate of the number of pupils receiving instruction in elementary science, because a considerable proportion are not sufficiently advanced to attend the examinations.

IMPROVEMENTS IN WREXHAM.

IN Egerton-street, three new brick cottages, with stone dressings, are being erected by Mr. J. Lewis, mason.

In the same locality is a villa residence for Mr. T. Williams, of the firm of Overton, Painter, & Co. The body of the building is brick, with stone dressings, and is from a design by Mr. Gummow.

Five dwelling-houses and a shop are being erected in Mount Meadow, the property of Mr. Thomas Rowland.

Last but not least, we may mention the new shop and premises in Hope street, for Mr. Edward Jones. These occupy a plot of ground 40 feet in frontage, by about 80 feet in depth. These, like the other buildings mentioned, are from designs by Mr. Gummow.

Nearly all along Regent-street and Hope-road to the railway station is now filled up with buildings; and, among the more recent improvements there, we have to notice the adding of a new wing to the Dispensary. The alteration was designed by Mr. Harrison, of Chester; and was conducted under the superintendence of Mr. W. Turner, architect.

One of the most striking of the many buildings that have recently sprung up in Wrexham is Park Lodge, in Rhosddu-lane. It was built by Mr. E. Lloyd, plumber; Mr. William Turner being the architect. The materials are bricks, which, for decorative purposes, are of various colours.

CHURCH-BUILDING NEWS.

Louth (Lincolnshire).—From a want of church accommodation in that part of the parish of Louth now known as St. Michael's district, and through the liberality of the late Rev. W. Wright who gave a site and 1,000*l.*, the rector was enabled to apply to Mr. Fowler for plans, and the design for the present building was the result. A contract was entered into with Mr. Timbs to carry these designs into execution; and on the 22nd of July last the corner-stone of the edifice was laid by Mrs. Wright. The edifice has now been completed and consecrated. In plan it consists of a nave of four bays, with north and south aisles, chancel, with apsidal vestry to the south, western porch or Galilee of two bays, and bell-turret. Externally the material employed is hammer-dressed stone, with groins and dressings of Ashloe; whilst for the internal walls red brick has been adopted, diversified with horizontal bands of yellow and black brick, with embossed tile texts and stone. The style selected is geometric, which, owing to the copious introduction of brick, has been modified by some features peculiar to Italian rather than English Gothic. Decoration properly so called has been employed very sparingly. The great height of the arches in the nave in proportion to that of the columns in which they rest, is one of the Italian characteristics. With the exception of the chancel arch all the others are simple, coloured bricks supplying the place of mouldings. The supporting shafts are circular, of red Mansfield stone, surmounted by capitals of Ancaster stone, carved in imitation of natural foliage, the subjects, beginning from the corbel on the left in entering, being as follows:—Blackthorn, buttercup, fig, columbine, and rose south side, apple ivy, marsh-mallow, maple, and horse chestnut. The chancel arch is enriched by the addition of a dripstone resting on sculptured corbels, and an under moulding. It springs from carved capitals, that on the north representing the passion-flower, that on the south the vine and wheat. Beneath these are shafts of polished serpentine, which material is also introduced in the jambs of the east window, at the angles of the

pulpit, and in the base of the front. The roofs are of deal, stained and oiled. The floor is laid with drab, buff, and chocolate coloured tiles, relieved in the chancel by the moderate use of figured tiles; for which, in what we may term the presbytery, slabs of polished serpentine are substituted. The windows of the nave are of two lights, with a trefoiled circle in the head: those in the clerestory are circles trefoiled and cinquefoiled alternately; whilst that at west end consists of three sexfoiled circles within a triangle. The east window is of three lights, with three circles, containing geometrical tracery in the head. The seats in the nave are of red deal, varnished: those in the chancel, also the altar-table, rails, prayer-desk, and lectern, are of oak. In the reredos dwarf clustered shafts of serpentine support three canopies, within which are elaborate panels, the centre one being inlaid with a cross of malachite. In the spandrils of the canopies the vine, wheat, and blackthorn are sculptured, and the crockets represent blackthorn, maple, and passion-flower leaves. Between the canopies are pedestals bearing statuettes of angels. The dimensions are as follows:—Nave, 62 feet by 19 feet; aisles, 63 feet by 12 feet 6 inches; chancel, 30 feet by 17 feet 4 inches; vestry, 20 feet by 12 feet; height of nave, 43 feet; ditto of chancel, 37 feet.

Fotherby (*Lincolnshire*).—The church here has been re-opened. The chancel has been restored at the expense of Mr. Everitt Allenby, of London, the lay impropriator. The church has been entirely rebuilt. It consists of a nave, chancel, western tower, and south porch. The architect has adopted the early character of some features, rather than that of the old Perpendicular windows, &c. The walls of the church generally are of dressed chalk, faced and coursed to work in with the ashlar of the windows, &c.; the buttresses and bands of the stone from the other range of the Wolds, known as the green sand. The interior presents a contrast, being built with the red brick and stone bands similar to St. Michael's Church, Louth, and has an altar-screen of plain and glazed tiles. The fittings are of pitch pine, stained and varnished, except the prayer-desk and lectern, which are of English oak. The roofs are open timbered, covered with slate, and coloured between the rafters with a light blue tint. The tower and spire are at the west end of the church: the spire is of the broach type, and rises about 100 feet in height: the tower is of three stages, the lower one having a lancet window on the western face; the second small slits to light the ringing-chamber; and the third four windows of two lights each, with a column to divide them instead of the usual mullion. The architect was Mr. James Fowler, and the builder Mr. T. Maxey.

Hemel Hempstead.—Great Gaddesden Church has been re-opened by the Bishop of Rochester. The church consists of a nave with north and south aisles, porch and clerestory, chancel, and tower at the west end. In the chancel-floor are two good fifteenth-century brasses, and a similar brass in the north aisle. The parish chest is formed out of a solid piece of oak, and is of great antiquity. The monuments of the Halsey family will repay inspection. Before the restoration the church was dilapidated and decayed; the interior disfigured with high pews; the gallery shut out; the tower arch and the architectural features of the church buried under whitewash. The whole of the interior fittings and gallery have been removed; the masonry repaired and cleaned; the walls re-stuccoed, and west tower rebuilt. The new seats are of varnished deal and modern construction. The pulpit and prayer-desk, of wainscot, were carved by Miss Halsey, of Gaddesden Park. The altar-rail is supported on iron standards, with scrolls, painted and gilt. The two carved oak chairs within the rail are the gift of Mr. Hudson, of King's Langley. The chancel is paved with Minton's red and black tiles. The windows of the tower are filled with rough sheet quarry glazing of a greenish tint, of various shades. The stained-glass east window of south aisle is by Wailes, of Newcastle. It is to the memory of Mrs. Hoare, and is the gift of her nephews and nieces. The new organ, built by Parsons, of Bloomsbury, is placed in the tower. The church has been warmed by Messrs. Rimington, of Skipton, Yorkshire. The five bells are being rehung by Messrs. Mears, of Whitechapel. Mr. Slater, of London, was the architect, and Mr. Joseph Harris, of Berkhampstead, the builder employed. It is intended to restore the roofs and external masonwork as soon as funds can be raised for that purpose.

Ramsgate. — An elaborately constructed and finished clock has been ordered from Mr. Benson for the "Temple" or Synagogue at Ramsgate, by Sir Moses Montefiore; and was set a-going in its place, at the commencement of the present month. The time is indicated on a plate dial of 47 inches diameter, surrounding which is a scroll bearing the legend, in white letters on a blue ground, "Time flies, virtue alone remains." The bells, cast by Mears, weigh 4 cwt. for the hours, and 1 cwt. 2 qrs. 21 lb. and 1 cwt. respectively for the quarters.

Stourbridge.—The masons have been demolishing the old Roman Catholic Chapel, it being intended to erect a new edifice, affording greater accommodation. The new building, which will face Kidderminster-street, will be Gothic in style, and occupy nearly the same area as St. John's Church. The external length is 124 feet; width, upwards of 50 feet. The tower and spire will be 134 feet in height; but the latter will not be added at present. The edifice will be built with red bricks, faced with Tisbury stone, while the columns of the interior will be of Scotch granite. The architect is Mr. E. W. Pugin; builder, Mr. Ife, of Wollaston. Mr. Ife's contract is for 3,170*l*.

Daylesford (*Worcestershire*). — Daylesford Church, in an outlying part of this county, has lately been erected under the superintendence of Mr. J. L. Pearson, architect. It is of comparatively small size, measuring from east to west about 64 feet externally. It is cruciform on plan, the three short arms, forming the chancel and transepts, being equal in length. The tower, supported by four arches, stands at the intersection; and access is obtained to the belfry by a circular turret at its north-west angle. The entrance to the nave is by a south porch, the inner door of which has been preserved as a relic of former times. Both inside and out the walls are formed faced with ashlar, diversified by occasional courses of a sienna-coloured stone. The roof is covered with the brown slate of the district. Red terra-cotta has been used for the shafts externally, and marbles of various colours in the interior. The whole of the wood-work is of oak.

Jackfield.—The Pritchard Memorial Church is now appaoaching completion. This building is from the design of Mr. A. W. Blomfield, and is in the French Gothic, freely treated. The roofing, turret, porches, &c., are executed in ornamental tiles and bricks, and in bands of blue, white, and red, relieved in parts by Grinshill stone. The builders are Messrs. Nevett, Ironbridge.

DISCOLOURATION OF WALLS.

IN the *Builder* lately I noticed a letter asking for some means to prevent a discolouration on the walls of a mansion. Discolouration in stone, the same as of gas-tar, will show through almost any amount of paint. I have preveuted it in both cases effectually by giving a couple of coats of painters' knotting; and this I believe would answer in this case. The knotting to be used should be one pint of naphtha to half a pound of shell lac. J. BOTTOMLEY.

A WORD ON CUPOLAS AND A GREAT MANY ON BASILICAS.

WITH sincere gratitude to "G. V. R." for taking so much notice of my lecture, I must beg leave to say that I do not precisely see the use of translating the plain English in which my last communication was written, and which does not seem to me (as it was not intended) to convey the absolute and *astounding* propositions which "G. V. R." ascribes to me. I spoke of the adoption of the cupola, or dome, in Christian churches, *as a fashion* used by the Crusaders in the Holy Land, while it did not exist, *as such*, in Western Europe before the twelfth century: indeed, I cannot recollect just now other *legitimate* examples of it, before that time, than St. Front, at Perigueux; St. Mark's, Venice; the Duomo of Modena, &c.; isolated importations or imitations of Byzantine architecture; while, after the twelfth century, they become so common as to amount to a fashion, coming more likely from the Holy Land than from Constantinople *direct*. I am aware that the Arabs borrowed the cupola from the Byzantines, as they borrowed also the pointed arch; retaining, however, the latter *as a fashion*, which the Byzantines did not.

However, I neither lectured, nor am ready to lecture, on the origin of cupolas; and am fully convinced that others are more competent to do so, including our friend "G. V. R." I wish he would.

As for the *basilica*, from what "G. V. R." says about it, I cannot help thinking I had better be the lecturer, if you will allow me.

"The general teaching that, until the Christian religion was tolerated, congregations listened to their teachers in synagogues and other public places," will not stand the test of history. "The crypt was more safe than the mansion;" but was only used in times of actual persecution; while, during the long intervals of peace, or comparative peace, whether in Rome or in the provinces of the empire, where persecution only afflicted individual provinces for the best part of the time, Christians made use of regular churches, erected for the most part in Rome, in the houses of the richer Christians, and of martyrs. Eusebius relates (Ecclesiastical History, vii. 15) how, in Cæsarea, in the persecution of Gallienus, about the year 300, the centurion Marinus having been allowed, by the judge Achæus, three hours to deliberate whether he preferred the decoration of the laurel wreath to Christianity and death, Bishop Theotecmus led him by the hand to the *church*, and placing him close to the *altar*, lifted up his chlamys, showing him the sword with which he was girt, and then placed opposite to him the codex of the Gospels, bidding him to choose.

Optatus Milevitanus, who wrote in 372-5, says in book ii., chapter 34, that *forty* Christian *basilicas* were seen in Rome before the persecution of Diocletian (284), when a certain Victor was sent thither by the Donatists, with the pretension of preaching Christianity there. Origen, in his tract 28 on St. Matthew, says that, in Maximian's persecution, in 236, several Christian *churches* were burnt by the Pagans. In 251, Pope St. Cornelius, in his epistle *ad Fabium*, testifies to Rome being divided into forty-six parishes; while Pope St. Evaristus, who reigned from 100 to 109, had already divided Rome into *monumenta* or church districts, and had enjoined that *stone altars* should be used. Finally, there are two epistles extant, from Pope St. Clement (91-100), to the Bishop of SION, containing instructions on *altars*, church vessels, and the maintenance of *sanctuaries*.

So far for the existence of regular churches (not "synagogues and other public places"), as the buildings in which Christian "congregations listened to their teachers until the Christian religion was tolerated."

With regard to such churches being often the halls or *basilicas* of Roman mansions, we find that the first churches in Rome were in the houses of St. Prisca, St. Pudentiana, St. Praxedes, St. Valentine, near the Circus Flaminius, St. Clement. This was during the first two centuries. In the third century, we find the houses of St. Calixtus, St. Cyriacs, St. Lucina, St. Pancras, St. Cecily, and St. Vitus, also becoming churches. The readers of *Fabiola* must be familiar with the arrangements made in those houses, when they thus became Christian parochial head quarters, and how their chief hall became the church. In fact, the form of this hall, the *single* nave and apse, is still the form of several of the most ancient churches of Rome, such as those of SS. Vitalis, Vitus, Cæsarius, Peter Marcellinus, Calixtus Sixtus, Peter in Montorio, and Andrew in Catabarbars, in the grounds of the convent of Sant' Antonio. We see, also, from old plans of Rome, that formerly the ancient churches of SS. Nereus and Achilæus, St. Eusebius, St. Anthony, and St. Matthew, were also single nave churches. In his "Eucologium Græcum," James Goar gives the plans of many ancient Eastern churches, all consisting of a single nave and apse. I alluded in my recent lecture to several of the most ancient churches of Jerusalem being also of that form; such as those of the house of John Mark, the house of Caiphas, the house of St. Thomas, of St. James the Less, &c. I may be told that the present churches, on those spots, are of comparatively recent date; but we have historical evidence of churches having existed on those spots from the fourth century, and there is every reason to believe that the Crusaders rebuilt them on the ancient foundations; so that the plans would still be ancient.

The practical deduction from such archæological inquiry is not to be despised, as it shows us how easy it is to give a Christian church a church-like or (as the Apostolic constitutions term it) a *ship-shape* form, by simply adhering to the *prototype basilica*, the single nave and apse. St. Charles Borromeo, in chapter XXX. of his "Instructions on Ecclesiastical Buildings," gives a complete description of what such "a simple church," as he calls it, should be; and therefore architects, in despair of not having the means of realizing their idea of a basilica, with all the developments

attached to the *type* of an ancient Christian church, need not rush into the opposite extreme of a shapeless, square conventicle; while, by leaving out the apsidal termination from the most ornamental and developed church, they impair its church-like appearance.

I trust you will excuse my trespassing thus with a *lecture* upon your valuable space; and that our friend, "G. V. R.", will accept the blame of having thus brought me out.

GEORGE J. WIGLEY.

COMBUSTIBLE MINERALS.

PROFESSOR ANSTED read an interesting and valuable paper on the 29th ult., at the Society of Arts, "On the Varieties of Combustible Minerals used Economically, considered in Reference to their Geological Position and Relative Value for certain Purposes."

Combustible minerals for fuel had been used, he remarked, to some extent, at a very remote period, by the Chinese, and in some parts of Hungary; but the use of mineral fuel to any extent, as fuel, was, he conceived, of comparatively recent date. The Professor then went on to describe generally the various kinds of combustible minerals that are of a more or less carbonaceous nature. First among these were the different minerals comprised under the name coal, a term that has been used without strictly correct or definite application. These minerals all agree in certain particulars among each other, and with some other carbonaceous combustible minerals that are not used for fuel, such as jet bitumens, and those bituminous minerals that have been used for the manufacture of oils by distillation. A certain part of all these minerals is carbon, a certain part is earth, and another part consists of hydrogen and some other less important constituents, varying considerably in amount.

It is possible to classify these carbonaceous minerals into groups, according to their respective properties, thus:—

1. Anthracite, which consists essentially of carbon and ash, with only a small amount of hydrogen. Geologically it occurs in the coal measures, and it is probably the product of a more advanced alteration of ordinary coal. It takes fire with difficulty, and requires a strong blast or draught for its combustion: it generates an intense local heat, but is more difficult to use than ordinary coal.

2. Coal which contains more hydrogen than anthracite, but so little ash and water that it is available as fuel for steam-boilers and general purposes. One variety of this mineral closely resembles anthracite in appearance, and is known as "steam-coal." There are numerous other varieties of coal, differing in character from steam-coal to jet, which is a kind of lignite, differing also in composition and in other respects. Some kinds soften and swell up when heated, and form a solid mass, whence they are called caking coals. Others retain their form in burning, but open up into fragments: these are called free-burning, or open-burning coals. Those containing least sulphur furnish the best coke. The kinds richest in volatile substance are much used in making gas, but in proportion to their excellence in this respect they are inferior in heating power. The best of these coals are known as Cannel Coal, and in Scotland as Parrot coal. True coal has been found recently by Professor Ansted in the tertiary rocks of Transylvania. Coal exists also in the lias and oolite series, and in the newer secondary rocks of the cretaceous series.

3. Lignite, or those varieties of imperfect coal which more closely resemble wood, and contain a larger amount of water than true coal. Many varieties of lignite contain a large amount of ash, and they generally crumble down when exposed to the air.

4. Bituminous shale, or those minerals that contain a large amount of earthy substance, but are useful for gasmaking, and for obtaining oil by distillation at a low temperature. This singular class of minerals contain much carbon and hydrogen, but they are not combined to form true bitumen. There are many varieties. The richest are found in Scotland associated with coal; and it is not unlikely that some of the partings between coal are of this nature, though they are generally thrown away as worthless. These minerals, under the name of Boghead coal and Torbanehill mineral, &c., have become familiarly known and of importance for the manufacture of oil by distillation according to a method introduced more than thirty years ago in France, and subsequently carried out in this country by Mr. Young, near Edinburgh. These minerals are intermediate between the more definitely marked shales and true coal; and it is difficult, if not impossible, to draw any line of demarcation between the two classes of minerals. All agree in refusing to coke, and in retaining their slatey structure after burning. The Professor called especial attention to the fact that there is a considerable number of shales in the old red sandstone and silurian series of rocks, most of which have not been examined with regard to their value as oil-yielding materials. Geologically, there is no limit to the localities where these shales may be found, nor is there limit to their variety of colour and general appearance.

5. Mineral asphalt, bitumen, and petroleum, contain a much larger amount of hydrogen than any of the other minerals already named: some of them are used for paving; while others, that are liquid, are useful for burning in lamps, and for making gas. Of the former kind are the pitch of Trinidad and Zante, and the Chapapote of Cuba. Of the latter kind are the Rangoon and American oils: the Albert coal is also a bitumen.

The mineral oils and bitumens are less frequent than bituminous shales, but they are more generally to be met with than is commonly thought, and they are the most valuable of all the carbonaceous minerals for the manufacture of oil.

As a general conclusion to his remarks, Professor Ansted said he wished to point out,—1stly. That the variety of combustible minerals available for practicable purposes is large, perhaps larger than is generally thought, and that such minerals form several significant groups. 2ndly. That they belong, all of them, to all geological periods, no one being of necessity limited to any part of the earth's history. 3rdly. That there is less advantage taken of many of them than their real importance deserves. And, 4thly. That much has yet to be determined as to the circumstances under which the organic kingdom of nature has been enabled to provide these large stores of carbon and hydrogen as mineral contributions to the well-being of man.

INDIAN RAILWAY PROGRESS.

THE BHORE GHAUT INCLINE.

A HIGHLY important railway communication has been opened in the Bombay Presidency. This communication brings the high lands of the Deccan,—2,000 feet above the sea level,—into close connexion with the low lands of the Presidency, and with the town of Bombay itself; converting the Deccan into a kind of suburban district for the citizens. The Bhore Ghaut Incline of the Great Indian Peninsula Railway has occupied more than seven years in construction; and during the greater part of that time there have been 45,000 workmen daily employed upon it. The incline is a series of tunnels through mountains of rock, and viaducts stretching across valleys, alternating with each other; each part a triumph of modern science and skill.

The incline reaches at one long lift the height of 1,832 feet, the highest elevation yet attained by any railway incline. It is 15½ miles long, and its average gradient consequently 1 in 46 39. The highest gradient is 1 in 37, and the sharpest curve 15 chains radius. The tunnels are twenty-five in number, the greatest length of any of them being 341¼ yards. There are eight viaducts, one consisting of eight arches of 50 feet and being 129 feet high, and another of a like number of arches with a maximum height of 143 feet. The quantity of cutting amounts to 2,067,738 cubic yards, and of embankments to 2,452,308 cubic yards. There are twenty-two bridges of various spans, and seventy-four culverts. The total cost of the works has been 1,100,000*l.* or 68,750*l.* a mile.

The construction of the incline was let by contract to Mr. Faviell during the autumn of 1855. In March 1859, Mr. Faviell relinquished his contract, and the Company carried on the works under the management of their resident engineers, Messrs. Adamson and Clowser, until the following November, when Mr. Solomon Tredwell, to whom the contract had been re-let in England (in the previous August), commenced operations. On Mr. Tredwell's decease, shortly thereafter, Mrs. Tredwell conducted the business of the contract, until, in March 1860, Messrs. Adamson and Clowser were permitted to resign the Company's service and accept the office of contractor's managers; Messrs. West and Tate being appointed resident engineers on the part of the Railway Company.

Books Received.

On Piracy of Artistic Copyright. By ERNEST GAMBART. London: Tegg. 1863.

MR. GAMBART having been a sufferer by such piracy, he speaks from experience in the matter. The law appears to afford little or no protection in such cases as those tried by Mr. Gambart; and even when he has obtained verdicts in his favour he has been unable to recover his costs, far less his damages for injury done to his business interests. The piracy of engravings (if that be its proper designation) by means of photography is the worst of all, in Mr. Gambart's estimation. His two-guinea engraving of Holman Hunt's "Light of the World" was photographed, and specimens were sold at 5*s.* each.

The remedies which Mr. Gambart suggests are these:—

"An amendment in the International Copyright Laws is first wanted. As these stand at present, the owner of a copyright, in order to secure his property in the different countries with which international treaties have been concluded, is compelled to register it in every one of them where he desires protection. In most cases he is obliged to incur the additional expense of depositing a proof impression of each engraving before he can receive the security required. This system of registering and depositing, when treaties shall be concluded between all the countries of Europe and America, will become impossible to carry out. Imagine a publisher having to register in a hundred different countries every one of his publications; and at a cost, for correspondence and agency, of at least ten shillings in each case (it now costs about twenty shillings for registration in Berlin): add to this, that a hundred proof impressions of all his plates will often outvalue the probable remuneration. It should be stipulated, to avoid all this, that when the owner of a copyright *shall have complied with the requirements of his own country's laws, his copyright shall be secured to him in any other country between which and his own there shall exist treaties have been made.* Such a provision would at once put a stop to the career of the Berlin publishers of cheap lithographic piracies, and enable foreign owners of copyright to sue them at home.

Many improvements in international treaties on artistic and literary copyright could be suggested, but this one above named is the most pressing: all other matters can be left for the consideration of a regularly appointed international congress, which could equalise the laws of all civilised countries on this subject.

One of the principal objections to the several older Acts of Parliament on the subject is, that they are not sufficiently clearly expressed, and that their wording leaves room for chicanery and repeated reference to the judges. Section 6 of the Act 25th and 26th of Victoria, chap. 68, appears to be more effectively worded; and its provisions, which at present only apply to the piracy of pictures, drawings, and photographs, should be extended to those of engravings and lithographs; but, in addition, it is necessary that a clause in any new Act should strike at the PURCHASER, and that the OWNERSHIP of piracies should not remain unchallenged.

The power of proceeding by summary process before two justices of the peace, granted to publishers of photographs, should also be given to publishers of engravings: it is the greatest evil of the late Act that engravings are not dealt with so favourably as photographs are. Lastly, it is necessary to devise some means of bringing to justice offenders who have no domicile, and hawk piracies from house to house, or station themselves in the public thoroughfares."

Lispings from Low Latitudes; or, Extracts from the Journal of the Hon. Impulsia Gushington. London: John Murray, Albemarle-street. 1863.

THIS is a capital book of its class: full of quiet fun and truthful picture. Impulsia visits the East, follows in the footsteps of Eöthen, and what she sees and what she does in the land of the beetle are here set forth with telling pen and pencil. Impulsia is weak, foolish, and not very handsome; yet such is her pluck, such her resignation under difficulties, such her faith in those she meets (a lovely quality), that we almost envy the vagabond Victor-Alphonse—into whose arms she falls at the close of the book, only to awake to further adventures of a harrowing character, to be set forth in a future volume. Lord Dufferin acts as sponsor for the author.

The Farm Homesteads of England. A Collection of Plans of English Homesteads existing in different Parts of the Country, to illustrate the Accommodation required under various Modes of Husbandry. Part I. Edited by BAILEY DENTON. London: Chapman & Hall. 1863.

THE first part of this work illustrates, 1.—The Flemish Farm, Berkshire; 2.—Thorney Farm, Cambridgeshire; and 3.—Buckden New Farm, Huntingdonshire, in seven plates. The work when completed will give twenty-four specimens of farms including "covered homesteads and homesteads distinguished by special accommodation for the rearing and feeding of all descriptions of stock." We must reserve our opinion till the work is farther advanced; but our present impression is that it will not go far enough to be so useful as it should be and might be. The descriptive matter accompanying the plates in the present part is meagre and insufficient. The plates do not include any sections.

Miscellanea.

THE CEREMONIAL OF JUNE 10TH.—The Memorial Committee and the Royal Horticultural Society have expressed their desire that every visitor (not merely those in the procession) who may be entitled to wear an academic gown, robe of office, or uniform of any kind, will appear in it on the day of the inauguration of the monument. We hope this request will be largely complied with.

PICTURES NOT HUNG AT THE ROYAL ACADEMY.—A private exhibition of pictures at the Cosmopolitan Club, Charles-street, Berkeley-square, shows that room could not be found at the Academy for some pictures of considerable merit. There are here twenty-six works, including some excellent landscapes by Mr. J. G. Naish, A. Mac Callum, and J. Bunney; a large earnest picture, "La belle Dame sans Merci," by Mr. H. Hughes; "An Allegory," by Mr. H. Holiday; and a capital picture by Miss Osborn, painted amongst the people in Mardorf, Kurhessen, called "A Spinnstube."

FORT WILLIAM, LOCHABER: THE BELFORD HOSPITAL.—An hospital is to be erected here, and endowed, by Mr. A. Belford, of Glenfintaig, at a cost of 20,000*l*. The foundation stone has just been laid with some ceremonial by "the brethren of the mystic tie," as Freemasons are sometimes called in Scotland. The building is to consist of two stories, besides attics and sunk cellars, and is to be according to plans drawn by Mr. H. Burrell, architect. The ground floor is to be taken up with the directors' room, doctors', housekeeper and servants' apartments: on the upper flat are to be the respective wards, including fever ward, operating room, and nurses' apartments. The entire dimensions of the building are 80 feet in length by 50 feet in breadth with a back wing 32 feet by 27. The contractors for the mason work are Messrs. Gray & Dick, Glasgow; carpenter work, Mr. Menzies, Oban; and plumber work, Messrs. Wallace & Allan, Glasgow.

SHAKSPEARE'S BONES.—There is a hot and violent controversy going on just now in literary and dramatic circles, remarks the *Court Journal*, about the propriety of moving Shakspeare's bones. Next year, in April, it is proposed to celebrate the tricentenary of the poet's birth, and it is urged that this would be a fitting occasion to make a solemn ceremony of digging up his mortal remains. The objectors, however, fear the curse which Shakspeare pronounced upon any one who would venture to disturb his bones. It is argued again that that was merely a hack inscription of the sextons and stone-cutters of the period. What is to be the end of the matter? What if no bones should be found? How fine a theory might then be raised that there was no Shakspeare! In the February number of the *Monthly Magazine* for 1818, however, there is evidence that the bones of Shakspeare were seen about that time. But why touch them now at all? We may add that the New Place Gardens wall in Chapel-street, Stratford-on-Avon, has been lowered and coped, so that now the public can have an uninterrupted view of the whole of the gardens, and also of the excavations showing the foundation of the "New Place," as it existed when inhabited by Shakspeare.

ACCIDENTS.—A workman has been killed by falling a depth of 70 feet from the staging for the temporary bridge which is being thrown across at Clifton, Bristol, preparatory to the erection of the suspension bridge there: the poor fellow was killed on the spot.——A man employed in some galvanised iron works at Birmingham Heath, having occasion to light a gas-burner over a tank of vitriol, in a boiling state, had to walk on a plank across the tank, when he fell into the deadly bath below. He was burnt nearly all over, and died in a few hours. There must have been culpable negligence here, for which either the workman or some one else was responsible.——At Baxender, near Bacup, during a recent thunderstorm, the lightning struck a mill chimney, built of brick, about 40 yards high, and knocked 2 yards off the top, and on the west side cut an even slice about 3 feet broad and 38 feet high out of it down to the bottom of the chimney, and left the other part remaining, but dreadfully shattered.——Some boys, while amusing themselves at a house in course of erection at Halifax, brought down a portion of a wall upon them, and one of them was killed on the spot, and four of the others seriously injured.——At Ipswich Quay, the floor of a chamber occupied by a corn merchant fell through. It contained about 600 sacks of wheat. On the beam underneath a number of iron pipes had been placed on brackets, and the combined weight was too great—hence the accident.

VOLUNTARY EXAMINATION CLASS: ARCHITECTURAL ASSOCIATION.—We are asked to say that the class will meet on Saturday afternoon, May 30th, at Mr. Myers's Works, in the Belvidere-road, at half-past two. On Wednesday, June 3, Mr. Lemon will continue the subject of Carpentry. Members are requested to bring sketches for a timber roof, 28 feet span, 45 feet long; gable at one end, hipped up at the other; gutters on two sides, eaves on third; ¼-inch scale, with details and specification.

RAILWAY TRAFFIC RETURNS.—The traffic receipts of railways in the United Kingdom amounted for the week ending the 9th of May, on 10,677 miles, to 561,870*l*.; and for the corresponding week of last year, on 10,237 miles, to 520,710*l*.; showing an increase of 440 miles, and of 41,160*l*. in the receipts. The gross receipts on fourteen railways amounted in the aggregate, on 7,290 miles, to 436,134*l*.; and for the corresponding week of 1862, on 7,036 miles, to 407,330*l*.; showing an increase of 254 miles, and of 28,804*l*. in the receipts.

SOMEBODY WRONG.—The following is said to be a list of the tenders sent in for proposed new school premises for boys at Haddenham:—

Kidd	£1,510 0 0
Bullock & Son	1,192 0 0
Attack	1,864 0 0
Gray & Son	1,037 0 0
Garner	871 14 0
Haird	720 6 6
Peart & Waters	697 0 0

The contractor takes the old materials of the present premises.—The difference is very discreditable, and ought to be explained. What have the highest and the lowest to say about it?

DRINKING FOUNTAIN IN ST. JAMES'S PARK.—A drinking-fountain has been set up in St. James's Park, on the south side of the enclosure, near Queen's-square Gate, by order of the Hon. W. Cowper, the chief Commissioner of Her Majesty's Works. On a pedestal of granite reclines a nude youthful figure in Sicilian marble representing a water-carrier. On one face of the pedestal a dolphin discharges water into a shell supported on a basket with water-lilies and other accompaniments,—a somewhat oddly built-up panel, also in marble. We have to protest, as of old, against the representation of heads of living creatures as spouts for drinkable water. As a whole, nevertheless, the fountain is creditable to the skill of Mr. R. Jackson, the sculptor, by whom it has been executed. It is beautifully placed, and we shall be thankful to Mr. Cowper if this lead to the adornment of the parks with other statuary. The parks already owe much to his taste and care.

MORTALITY IN ENGLAND.—In the 10 years 1851-60 the annual mortality in the districts comprising the chief towns was 24·57 per 1,000 living; in the districts comprising small towns and country parishes, 19·77; in all England, 22·24. The deaths of males averaged 23·18 per 1,000 living; of females, only 21·34. Out of equal numbers living there were 109 deaths of males to 100 deaths of females. Of the persons who lived to be 100 years old there were two women to one man. Two of the 623 districts into which England is divided—namely, Farnborough in Surrey, and Bellingham in Northumberland, with a population respectively of 14,318 and 7,080, took the lead in healthiness, and had in the 10 years an average annual mortality of only 14 in 1,000; and two other districts in Northumberland, Glendale, with a population of 13,211, and Rothbury, with 7,147, had an average annual mortality of only 15 in 1,000. In no other entire district was the annual mortality so low as 15; but it was only 16 in 10 districts,—namely, Epsom, Bromley, Steyning, Easthampstead (Berks), Dulverton (Somersetshire), Billesdon (Leicestershire), Hemsworth (Yorkshire), Belford (Northumberland), Bootle (Cumberland), and Knighton (Radnorshire). In the entire district of St. George's, Hanover-square, the average annual mortality was only 18 per 1,000; and the same in Lewisham; and in the Hampstead district only 17. Taking the whole country through, not above one district in five had so low a mortality as 18. During the 10 years 1851-61, from census to census, London increased its numbers 121 a day, 72 by excess of births over deaths, and 49 by immigration; but this continual accumulation of human beings within its limits did not bring an increased mortality. In the 10 years 1840-49, the average annual rate of mortality in London was 25·1 per 1,000: in the subsequent decennium, 1850-59, it fell to 23·6 per 1,000. This may seem a small thing in a single thousand, but London has nearly three thousand thousands.

GAS.—Mr. Smeed is erecting new gasworks at Murston for Sittingbourne. They will include a coal-shed large enough to hold 1,000 tons. The main, an 8-inch one, is already laid half way to Sittingbourne.——At Godalming, dissatisfaction having existed relative to the price of gas, which is now charged 7*s*. 6*d*. per 1,000 feet, steps have been taken to bring the subject before the gas company. In the event of the directors declining to reduce the price, a gentleman, it is said is prepared to undertake to supply the town at from 4*s*. to 5*s*. per 1,000 feet.

BALMORAL: CAIRN IN HONOUR OF THE LATE PRINCE CONSORT.—A large cairn, of pyramidal shape, erected by command of her Majesty the Queen, in memory of the Prince, has just been completed. It occupies a commanding position on a hill some distance south of the castle, and may be distinctly seen from near Crathie. It is built of roughly-dressed stones, and measures 35 feet square at the base and 40 feet in height. On the north slope a tablet is built, having on it a suitable inscription, with a quotation from the Wisdom of Solomon, iv. 13, 14,—"He, being made perfect in a short time, fulfilled a long time. For his soul pleased the Lord: therefore hasted He to take him away from among the wicked." On the east slope are cut out the initials of all the members of the royal family, and the date 21st August, 1862, immediately under.

THE FLEETS AND RESERVOIRS AT LYNN.—The "reservoirs" (more fitly they might be called cesspools) used for retaining "back water" between the tides, for scouring out the "fleets" which form one of the distinguishing features of this town, have for years past been regarded, and justly, as a serious nuisance to the inhabitants. The fleets themselves, whatever their value for the purpose of navigation, are little more than open sewers; and one of them, called Purfleet or Clough fleet, which passes under a bridge in High-street, is a sink of abomination and filth of the worst description. Another, almost as bad, is the Fisher fleet, which receives the refuse of the North-end, and has its reservoir in the thickly-populated district known as Lower Canada, not far from the railway station. The deposits in these fleets were carried by the flood tide into the reservoirs and there accumulated. Steps have been taken with a view to having the two reservoirs filled up.

COMBINATION OF KNOWLEDGE.—In the course of the excellent speech made by Lord Stanhope when presiding at the anniversary dinner of the Literary Fund on the 13th, the speaker said that, amid the congratulations which were fairly earned, he could not help feeling with some regret that from year to year the various branches of knowledge had an increasing tendency to run in separate channels, having less and less communication with each other. Last week, before the commission now sitting to consider the constitution of the Royal Academy, a gentleman with whose merits they were all acquainted, Mr. Beresford Hope, was examined; and, having expressed his views on the immediate subject of inquiry, he was led to offer some remarks on the intellectual progress of the country, in the course of which he said that there was a constant tendency to establish three societies to do the work of one. He himself feared that these different societies had not all the success which their founders could wish; but what he chiefly complained of was the increasing spirit of isolation between those cultivating different branches of literature and science, and their indisposition to meet on common grounds for the general good. He had been for some twenty years connected with different institutions, committees, or councils; and he had remarked, of late years, what was not before observable, that the eminent men in each particular branch of study were inclined to band themselves together in support of that study, and not to think so much of the interest of the whole. That was his deliberate opinion of the tendencies of the present day. He did not apply blame to any one branch more than another, but he thought there ought to be a free communication between those cultivating different branches of knowledge, instead of something of a supercilious feeling. In France the opposite system prevailed: scientific men were willing and happy to meet others upon a common ground. The result was, that the Institute of France had spread its influence through the whole of that great nation, and might be said to extend its ramifications to other countries and to the world at large. In England we did not want the men: he need only look round the room to establish that proposition: it was the spirit of combination that was wanting.

ST. MARTIN'S SCHOOL OF ART.—At the *conversazione* of this School, to which we have already alluded, twenty-six local medals were awarded: six received honourable mention, and there were fifty-seven certificates, and twenty-seven prizes: seven free studentships were also awarded. Messrs. Thomas Baseden, Henry Reich, and Alfred Warner, obtained national medallions.

WATER-COLOUR ARTISTS' LANCASHIRE FUND.—A correspondent says,—"Some months since, I subscribed to an Exhibition of Water-Colour Pictures. The proceeds of the subscriptions were to go to the Lancashire Distress Fund. Will you insert a *query* in the next *Builder* as to the amount of the fund, how it has been appropriated, whether the lottery has been drawn, and who were the fortunate prizeholders?" The collection, we learn, is still in Manchester: the allotment has not yet been made. The various subscription-books are to be gathered in forthwith, and the distribution will doubtless follow soon after.

BRIGHTON DRAINAGE. — The Town Council have at length taken a step towards the drainage of the town. The nuisance arising from the Albion Outfall at the eastern part of the town, has been repeatedly complained of. The Council have decided to adopt the proposition of the Borough Surveyor for extending this Outfall to a third of a mile from the sea-shore, at an estimated cost of 6,500*l*. This proposed outfall, it is said, will not interfere with any plan that may hereafter be carried out for the complete drainage of the town, whether it be for taking the sewage to the east, the west, or inland. But it may be all waste money.

THE RAG-COLLECTING BRIGADE.—The first annual meeting has been held at Radley's Hotel, under the presidency of the Earl of Shaftesbury. The report, which was very encouraging, stated that with only four trucks the boys had in nine months, up to Christmas last, collected upwards of eighty tons of rags and refuse, besides 50,000 bottles; that householders regarded the operation very favourably; and there was little doubt if funds were supplied the movement would gradually extend over the metropolis, finding employment for many hundreds of boys. The committee state that with ten trucks the first depôt would be self-supporting; and to accomplish this about 250*l*. more is wanted, each truck requiring a trading capital of 50*l*.

LECTURES ON STAINED GLASS.—The fifth of the series of six lectures, addressed to the people of Birmingham under the auspices of the Birmingham and Midland Institute, was delivered on Monday evening last, by Mr. John Hardman Powell; the subject being "Stained and other Glass." The lecturer ridiculed the present manner of criticising works in stained glass; and urged, as the basis of his discourse, that the style or rather mixture of styles followed by the manufacturers of stained glass at the present day was inferior to that known as the Early English style. The true principles of the art, he contended, were declining, because of the errors which had been introduced, and were now adopted. Those errors were, in his opinion, chiefly a restless desire for novelty, the use of antiquated glass, the want of nationality in the glass, a too high finish, a cracking into bits of styles, a great desire for money, the time given for thought was too limited, a striving after natural effects alone in the drawing, and last the mixture which was made of all the different styles of other countries.

ARCHITECTURAL EXHIBITION, CONDUIT-STREET, REGENT-STREET.—On Tuesday evening, the 19th, Dr. C. Dresser delivered an interesting lecture on "The prevailing ornament of China and Japan." The lecturer called attention to the recent opportunities which we have had of acquainting ourselves with the ornament of Japan; and stated that the style of ornament prevailing in China and Japan is rich in art qualities, and is deserving of careful study. He then proceeded to say that ornament is of an æsthetic or symbolic character. Greek ornament was made up of forms intended only to delight by their beauty. Egyptian ornament consisted of forms which addressed the understanding. Mediæval ornament was also of this nature. He observed that Japanese ornament was both of a symbolic and æsthetic character, and instanced as examples of the former the sacred bean found in tombstones, and many articles of religious services, the dragon devouring the sun (the eclipse), conventional eyes, stork, sacred mountain, &c.; of the latter, small birds, insects, and plants. As we are treating at length on these same points, we need not here go farther into them.

THE EXHIBITION BUILDING.—We are able to state that the Government are prepared to recommend the purchase of the Exhibition Building by the nation. The terms, both in respect of the building and the land on which it stands, are agreed on.

THE EXTENT OF THE BRITISH COLONIES.—The colonies of Great Britain comprise altogether 3,350,000 square miles, and cost us for management 3,350,000*l*. per annum, or just about a pound a mile. They have an aggregate revenue of 11,000,000*l*., and owe among them 27,000,000*l*., or just two years and a half's income. They import goods to the amount of 60,000,000*l*. yearly,—half from ourselves, and half from all the rest of the world. They export produce to the value of 50,000,000*l*., of which three-fifths come to this kingdom; and all this is done by a population which is under 10,000,000 in the aggregate, and of which only 5,000,000 are whites. Add to these figures, says the *Spectator*, 900,000 square miles for India, and 200,000,000 of people with a trade of 71,000,000*l*., and we have a result that *the Queen reigns over nearly one-third of the land of the earth and nearly a fourth of its population*. If a British vizier under the Emperor should, as seems probable, rule China, Englishmen will directly control *more than half the human race!*

TIN-LINED LEAD CISTERNS AND PIPES.—At a meeting of the Liverpool Chemists' Association, specimens of lead-pipe and sheet lead, electroplated with tin, were exhibited by Mr. Holt, and some discussion ensued respecting the use of lead coated in this manner for water-cisterns and pipes. It appeared to be the opinion of the meeting that the coating of tin, instead of preserving the lead, was far more likely to ensure its more rapid corrosion; for if the coating of tin by any means happened to be scratched off, even to the slightest extent, galvanic action would take place, and the lead would be destroyed very quickly. Dr. Nevins and Dr. Edwards stated that their experiments had proved that such would undoubtedly be the case; Dr. Edwards remarking that, in one case which he had examined, a cistern made of lead, in which was an accidental admixture of tin, was eaten out by well-water in six months, the lead being rapidly precipitated in the form of sulphate, &c.

TENDERS.

For additions and alterations to farmhouse, Nuthfield, near Redhill, for Mr. T. Welch. Messrs. Wales & Sparks, architects:—

Robinson	£2,373 0 0
Conder	1,895 0 0
Henshaw	1,839 0 0

For German Hospital, Dalston. Professor Donaldson, architect. Mr. Gritten supplied the quantities:—

Cubitt & Co.	£12,492 0 0
Rider	12,118 0 0
Timewell	11,920 4 9
C. Fish	11,810 0 0
Browne & Robinson	11,430 0 0
Ashley & Son	11,100 0 0
Piper & Wheeler	10,945 0 0
Lawrence	10,879 0 0
Patson	10,743 0 0

For new malt stores, for Messrs. Ind, Coope, & Co., Romford Brewery. Mr. C. Dyson, architect. Quantities supplied by Mr. W. Meakin:—

Reed	£2,747 0 0
Rivett	2,715 0 0
Ashley & Sons	2,687 0 0
Ashmole	2,640 0 0
Peny & Judson	2,598 0 0
Hammond (accepted)	2,439 10 0

For part of additions to residence, Bexley Heath, Kent, for Mr. H. March. Mr. Herbert Ford, architect. Quantities not supplied:—

Henshaw	£1,673 0 0
Wood (late)	1,650 0 0
Larke	1,630 0 0
Bills & Gumbrell	1,540 0 0
Francis & Son (late)	1,414 0 0
Rawlins (accepted)	1,329 0 0

For public house to be built in Wells road, Sydenham, for Mr. Thomas. Mr. Edward H. Badger, architect:—

Gorram	£950 0 0
Searle	940 0 0
Gerard	894 0 0
Amer	875 0 0
Rees & Jones (accepted)	850 0 0
Miller	785 0 0

For church proposed to be erected in Raleigh-street, Nottingham. Messrs. Hine & Evans, architects. Quantities supplied:—

Elliott & Lilley	£7,673 0 0
Wright	7,622 0 0
Willimott	7,565 0 0
Thompson & Fryer	7,021 0 0
Young	7,000 0 0
Wilson*	6,995 0 0
Simpson & Lynam	6,675 0 0
Dennett & Co. (accepted)	6,350 0 0

* This tender was for Ancaster stone only: the remainder were for Little Eaton stone.

For schools and master's house proposed to be built at Cotgrave, Notts, for the Right Hon. Earl Manvers. Messrs. Hine & Evans, architects. Quantities supplied:—

Wilson	£1,420 0 0
Croft & White	1,150 0 0
Dennett & Co.	1,095 0 0
Claricot	1,085 0 0
Gilbert & Wood	1,055 0 0
Simpson & Lynam	1,044 0 0
Dawson	1,039 0 0
Han & Wood	1,032 0 0
Barker	1,021 0 0
Willimott	1,020 0 0
Young	1,010 0 0
Thurman	1,006 0 0
Smith	1,003 0 0
Belt & Wood	995 0 0
Stevenson & Weston	994 0 0
Bradbury	949 0 0
Booker	930 0 0

For new police station at Whitstable. Mr. Bulmer, county surveyor. Quantities supplied:—

Anscomb	£740 0 0
Wilks	648 0 0
Cobb	646 0 0
Shrubsole (accepted)	625 0 0

For new police station at Tonbridge. Mr. Bulmer, county surveyor. Quantities supplied:—

Anscomb	£2,950 0 0
Constable	2,888 0 0
Chalklin	2,824 0 0
Punnett (accepted)	2,779 0 0

For new Congregational chapel, Barking. Mr. W. F. Poulton, architect:—

Myers	£2,254 0 0
Bennett	1,950 0 0
Turner & Sons	1,877 0 0
Dove, Brothers	1,875 0 0
Morter	1,875 0 0
Perry	1,698 0 0

For four houses and shops, King street, Twickenham. Mr. Robert W. Edis, architect. Old materials allowed to be re-used:—

Jacklin	£1,700 0 0

For making first portion of new road and drain. Mr. Robert W. Edis, architect:—

Jacklin	£97 0 0

For alterations and additions to Somers House near Billingshurst. Mr. Robert W. Edis, architect. Old materials allowed to be re-used:—

Cane	£3,360 0 0
Fabian	3,285 0 0
Sharpington & Cole	2,697 0 0
Hardiman & Sandon	2,300 0 0

For the erection of a pubic house at Clapton, for Messrs. Courage & Co. Mr. Chester Cheston, jun., architect:—

Russell & Gray	£1,644 0 0
Chapman	1,545 0 0
Flint	1,533 0 0
Simms	1,498 0 0
Mann	1,428 0 0
Bowman	1,418 0 0
Hall	1,363 0 0
Kilby	1,345 0 0
Perry	1,330 0 0
Roberts & Strange	1,191 0 0

For residence, lodge, stables, and outbuildings, house fittings, hot-houses, &c., for Mr. Alderman Gabriel, at Wimbledon Park. Mr. J. Murray, architect. Quantities supplied:—

Brass	£8,076 0 0
Robinson	7,967 0 0
Thompson	7,868 0 0
Myers	7,830 0 0
Nicholson	7,645 0 0
Aviss	7,497 0 0
Patrick	7,368 0 0
Ayres	7,250 0 0
Duncanson & Moultrie	7,180 0 0
Brown	6,676 0 0
Longmire & Burge	6,336 0 0

For alterations to lodge, Kingston-on-Thames, for Mr. Winter. Mr. C. H. Luck, architect:—

Boxall	£260 0 0
Duncanson & Moultrie	226 0 0

For building four cottages, at Barrow-upon-Soar, Leicestershire, for Mr. A. Archer, Loughborough. Mr. T. W. H. Miller, architect. Quantities supplied:—

Greaves	£425 0 0
Sanders	410 0 0
Grundy	362 7 6
Barker	361 3 6
Bromhead	265 0 0
Wheatley (accepted)	262 10 0

For building manufactory at Kentish Town, for Messrs. Ash & Sons. Mr. John Belcher, architect:—

Browne & Robinson	£3,010 0 0
Colls & Co.	2,967 0 0
Lawrence	2,933 0 0
Coleman	2,829 0 0
Downs	2,796 0 0

For restoration of St. Andrew's Hall, formerly the Church of the Black Friars, Norwich. Mr. Barry, architect. Quantities supplied:—

Lacey	£2,870 0 0

For fitting and erecting shop at Messrs. Hodge & Son's premises, Millwall, Poplar. Mr. John W. Morris, architect. Quantities supplied. Net amounts, after making allowance for old materials:—

Heiser	£1,056 0 0
Sneffield	1,050 0 0
Langtree	945 0 0
Jeffrey	929 0 0
Munday	900 0 0
Watts	892 0 0
Enor	879 0 0
Salt	827 0 0
Hack & Son	715 0 0

For alterations at 27, Change-alley, Cornhill, for Mr. G. Taylor. Messrs. J Young & Sons, architects :—

Henshaw	£414 10 0
Chesham	405 0 0
King & Sons	387 0 0
Knight	271 0 0

For pulling down and erecting a Wesleyan Methodist chapel at Dartmouth-road, Sydenham. Mr. W. W. Jenkins, architect. Quantities supplied by Messrs. J. C. & G Lansdown :—

Add, if Front and Returns are faced of Bath Stone instead of Portland Cement.

Myers & Sons	£3,955	0	0	£329 0 0
Lawrence & Sons	3,833	0	0	310 0 0
Higgs	3,850	0	0	250 0 0
Pawley	3,782	0	0	250 0 0
Capps	3,736	0	0	226 0 0
Coils & Co.	3,697	0	0	273 0 0
Ward	3,625	0	0	433 0 0
Deacon	3,400	0	0	400 0 0
Thompson	3,368	0	0	200 0 0
Chinnock, Brothers*	1,350	0	0	100 0 0

* Accepted.

For dwelling-house and veterinary establishment, for Mr. Thomas Wells, Norwich. Mr. Barry, architect. Quantities supplied :—

Boardman	£1,920 0 0
Foyson	1,770 0 0
Murray & Son	1,726 0 0
Spinks & Wright	1,705 0 0
Downing	1,695 0 0
Lacey	1,685 0 0
Brooks	1,670 0 0
Brown & Bailey	1,649 0 0
Balls	1,640 0 0

TO CORRESPONDENTS.

The Work of "a Monkey."—Will any of your readers be kind enough to inform me of a good practical rule or formula to ascertain the work done by a monkey of a pile engine of a given weight and falling a given distance? Thus, a monkey weighing 2 tons and falling 40 feet, what would be the force or work done by the blow?

S. C. E.

G. T. R.—W. H. (the architects of Ireland afford little information of their proceedings. The observation shall not be lost sight of).—F. W. (notice referred to, although it apply, was not addressed to Messrs. W. Reply to their note was given in same number. No discourtesy was intended).—T. D.—F. D.—J. L. And4 (we are not disposed to insert duplicate engravings).—H. B. & B.—W. R. (next week).—R. P. (ditto).—J. W. M.—An Old 'Freemason.—One of the Crafty Craft.—J. H.—G.—Mr. B.

We are compelled to decline pointing out books, and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

Advertisements cannot be received for the current week's issue later than **FIVE o'clock, p m.,** *on Thursday.*

THE *Illustrated London News*, Nov. 8, speaking of Benson's Watches in the Exhibition, says:—"Ranged around the base of the clock were the Watches which Mr. Benson exhibited, and which have been universally admired for the beauty and elegance of the designs engraved upon them. The movements are of the finest quality which the art of horology is at present capable of producing." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post. J. W. BENSON, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

TO ARCHITECTS, BUILDERS, and OTHERS.—TO BE LET, on Building Leases, at low ground rents, about 50 acres of most eligible BUILDING LAND, immediately adjoining the Colney Hatch Station, on the Great Northern Railway. Gravelly soil and good water. There is a great demand for villa residences in this neighbourhood. The connecting of the Great Northern Railway with the Metropolitan Railway makes this property within half an hour's ride of the City or West End.—Apply to Mr. S. BARKER BOOTH, Solicitor, 4, Gray's-inn-square.

BUILDING LAND in FLEET STREET TO BE LET, about 43 feet frontage, and 85 feet deep.—For terms apply to J JOHNSON, Esq. 9, John-street, Adelphi; or to Mr. JAMES ARDING, 62, Dunet-street, Fleet street; or Messrs RUSHWORTH, JARVIS, & ABBOTT, Saville-row, Regent-street, and 19, Charlesalley, Cornhill

BUILDING LAND or DILAPIDATED PROPERTY WANTED, near to Farringdon-street, about 1,500 square yards or in acres, within a mile to the north of about 120 feet, suitable for erection of a lofty factory.—Full particulars to be addressed to Messrs. ARDING & BOND, Surveyors, 23, Bedford-row, W.C.

FREEHOLD GROUND RENTS, CITY of LONDON.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on THURSDAY, the 18th of JUNE next, at TWELVE o'clock precisely, to receive PROPOSALS for the PURCHASE of FREEHOLD GROUND RENTS, on Premises let on Building Leases, having about eighty years unexpired, and severally situate Nos. 70 and 71, Watling street; Nos. 78 and 77, Newgate-street; and No. 4, Maidenhead-court, Aldersgate-street; particulars and plans of which may be had at this office, together with the conditions of sale. Tenders must be sealed, endorsed outside, "Tender for Ground Rent," and addressed to the undersigned at this office, and must be delivered in before TWELVE o'clock on the said 18th of JUNE next. The Commissioners do not bind themselves to accept any Tender unless the sum offered shall be deemed eligible. Parties tendering must attend personally or by an authorized agent on the day of treaty, and be then prepared (if their Tender be accepted) to pay the required deposit of 10 per cent. and to execute an agreement for the completion of the purchase agreeably to the conditions of sale.

JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, April 29, 1863

DESIRABLE BUILDING GROUND, at BALL'S POND, within 2½ miles of the Royal Exchange.—The Worshipful Company of Cutlers gave Notice that, on or before the 24th JUNE, 1863, they will be prepared to receive TENDERS (to be sealed and delivered at Cutlers' Hall, Cloak-lane) for LETTING, on a Building Lease, for 99 years, a PLOT of FREEHOLD GROUND (land-tax redeemed), situate in the Ball's-pond-road, about half way between the Ball's-pond and Kingsland turnpike-gates, and adjoining the Company's Almshouses, containing an area of about 22,100 feet, with a frontage of 166 feet on the high road, by a depth of 200 feet, walled in on two sides. The estate is adapted for the erection of four shops fronting the Ball's-pond-road, and nine private houses, or for a public institution.—For further particulars, apply to Messrs BEAUMONT & THOMPSON, Solicitors, 73, Lincoln's-inn-fields; or to Messrs. TRESS & CHAMBERS, Architects, 27, Queen street, Cheapside, E.C. at whose Office plans may be inspected.

LONDON and SUBURBAN LAND and BUILDING COMPANY, LIMITED. Incorporated under "The Companies Act, 1862."—Offices, No. 74, Penchurch street, City, E.C. Capital, 5,000*l.* (with power to increase), in 5,000 shares of 10*l.* each. Deposit 2*l.* per share, of which 1*l.* is to be paid on application and 1*l.* on allotment. No call to exceed 1*l.* per share, nor to be made at less intervals than two months between each, until the sum of 8*l.* per share is paid up, beyond which no further call is contemplated.

ABRIDGED PROSPECTUS

The objects of the Company are:—The purchase and sale of freehold and leasehold lands and hereditaments in England; the purchase, enfranchisement and sale of copyholds; the erection of dwelling-houses and other buildings; the purchase of reversions; the improvement of property by drainage and laying out, and making thereon roads, gardens, squares, ornamental grounds, or otherwise; the exchanging, letting, and leasing of property; the accumulation of moneys at interest on freehold, copyhold, and leasehold securities; the borrowing and taking up of moneys at interest, the carrying on the business of a Land, Building, Advance, and Investment Company in all its branches and departments; and generally to do all such other things as are incidental or conducive to the attainment of all or any of the above objects.

The Company is an embodiment and extension of the London and Suburban Freehold Land Society, which has been in active and successful operation for upwards of seven years, and which for the last nine years has paid a dividend of 7 per cent.

It is Company has, however, in view a wider field of action, as may be collected from the attainder of its objects, which may be given.

The Board of Directors is composed chiefly of gentlemen who have for many years taken an active and prominent part in the management of the London and Suburban Freehold Land Society, the stability of them having been on its direction.

The Company begins its duties free and unembarrassed, inasmuch as, excepting the usual preliminary expenses for preparation of the articles of association and the registration of the Company, "preliminary expenses," which words often signify the payment of large sums on the allotment of paid up shares to promoters,—form no item to them.

The Members of the Land Society have already subscribed for a large number of shares in the Company, and only be allotted as a premium of 2*s.* 6*d.* per share, and no application for shares at that premium will be entertained after the 30th proximo.

Prospectuses with forms of application and shares may be obtained at the offices, or by post on the applicant inclosing a postage-stamp to the Secretary, Mr JONATHAN TAYLOR.

TO BUILDERS, CABINETMAKERS, and OTHERS.—For SALE, a quantity of OAK, ASH, ELM CHERRY TREE, ABELE POPLAR, and SWEET SPANISH CHESNUT TIMBER, in plank and in the tree.—For further particulars apply to the Saw Mills, Lattimore-road, St. Alban's.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100*l.* to 1,000*l.* upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

EXTENSIVE PREMISES TO BE LET on Lease, containing 110 feet frontage, with Three Six room Houses and Three Front Shops, with Stabling and large spacious Workshops for any purpose requiring space, in Henrietta-street, facing Oxford street, with immediate possession.—For particulars, apply to Mr. GIBBON, Old Cavendish-street

BUILDING LAND, WIMBLEDON.—TO BE LET, on ninety-nine years lease, a PLOT of FREEHOLD BUILDING LAND, situate on the Ridgway, commanding extensive and magnificent views of the Surrey hills, Wimbledon Park and the Valley of the Wandle. It is about one mile from the Station, and near a church.—Apply to Mr. W. M. OGDEN, Land Agent and Surveyor, Wimbledon, S.W.

PREMISES (BUILDER'S) TO BE LET, near Holborn, large WORKSHOP, YARD, and STABLE; gate entrance.—Apply at 21, Gloucester place, Kentish-town, between Twelve and Two or Five to Seven o'clock

LAND TO BE LET, for building villas of a respectable class, at Hendon, Middlesex, four miles from the Regent's Park. The estate is freehold, and comprises 300 acres. To a responsible party money would be advanced as the buildings progress For particulars, apply to CHARLES FREEMAN, Esq. 60, Lincoln's Inn-fields, W.C.

TO ARCHITECTS and SURVEYORS.—OFFICES in the House of a Solicitor, near the British Museum, are OFFERED.—Mutual business arrangements might be effected, particularly with a gentleman acquainted with benefit building, or similar societies.—Address, C. D. or personally, No. 6, Caroline-street, Bedford-square, W.C.

CHARING CROSS, PARLIAMENT STREET, or GREAT GEORGE STREET, or the neighbourhood. WANTED to PURCHASE, Freehold or Long Leasehold PREMISES. Apply to Messrs HARGRAVE, FOWLER, & BLUNT, 3, Victoria-street, Westminster.

FREEHOLD GROUND.—WANTED to PURCHASE.—The Trustees of the Parish of St. Mary, Islington, in the County of Middlesex, hereby give Notice that they require PARTICULARS of Five or Six Acres of FREEHOLD GROUND, within their Parish, FOR SALE, for the purpose of Erecting thereon a new Workhouse. Such particulars should be addressed to the Clerk on or before the 15th day of JUNE next, stating the situation, extent, and price required for the same. WM. HICKS, Clerk.
Parochial Offices, Islington, 27th May, 1863

TO BUILDERS and OTHERS.—TO BE LET, within half a mile of the Nine Elms Station, COMMODIOUS PREMISES, suitable for Workshops, &c. extending over an area of 150 feet by 55 feet, at present a brewery, but easily convertible; consisting of a brick building 55 feet long, 20 feet wide, and three floors high, suitable for carpenter's and joiner's shops, with steam-engine of 4 horse power, large sheds, stabling for eight horses, and two yards. For particulars, apply to Mr. J. H. BRIDGES, Paleon Brewery, Ipswich

NEW KENT ROAD.—DOVER PLACE, Saint Bartholomew's Hospital.—TO BE LET, from LADY-DAY next, on Repairing Leases for twenty-one years, the HOUSES numbered 17 to 27, inclusive.—For further particulars apply at Mr. HARDWICK'S Office, No. 1, Henrietta-street, Cavendish-square.
WILLIAM WILBY, Clerk.
St. Bartholomew's Hospital, May 28, 1863.

WANTED to PURCHASE, Freehold, or to Rent on a Long Lease, PREMISES, TENEMENTS, or LAND, containing an area of about 5,000 superficial feet, situate within one mile of the Royal Exchange Particulars to be addressed to JOHN GRIFFITH, Esq. 16, Finsbury-place South, E.C.

MANUFACTURING WATERSIDE PREMISES, occupying about an acre of ground. TO BE LET, on lease, direct from the freeholder, a building (term if desired, eleven) fully paved, MANUFACTURING PREMISES, situate at West Mam Abbey, Essex, a few minutes' walk from the Stratford-bridge Station of the North Woolwich Railway, with waterside frontage near the Channel Sea River. The ground occupies a site of about one acre. The buildings are spacious ground-floor erections, and there is a handsome and lofty brick chimney shaft.—For particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

ST. JOHN'S WOOD.—BUILDING GROUND, not far from Hamilton-terrace, TO BE LET, by the Freeholder, for a number of terrace villas, with 21-feet frontages. Ground-rent only five guineas each. Advances to Messrs. POWELL, Building Land Agents, 1, Queen's-row, Bayswater-road, W.

BUILDER'S PREMISES, HACKNEY.—TO BE LET, on LEASE, a capital YARD, with spacious workshops and office and with or without dwelling-house. There is a small stock of well seasoned material, which may be purchased at a valuation.—For particulars, apply to Mr. THOMAS BULL, Auctioneer, 61, Cornhill, E.C.

FREEHOLD LAND TO BE SOLD or LET on Building Leases:—Two Acres near Forest-hill Railway-station; One Acre adjoining Norwood Railway-station; Three Acres at Glengall Grove-road, Old Kent road.—Apply to Mr. MAY, Acorn Wharf, Old Kent road.

CITY of LONDON.—BARBERS' HALL.—TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell-street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear. For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty-street, W.C.

NORFOLK COAST.—HUNSTANTON, ST. EDMUNDS.—Eligible BUILDING LAND in the rising watering-place situated near Sandringham, the seat of H R H the Prince of Wales, TO BE LET, on very reasonable terms for the erection of first and second-class houses and villas. There is direct communication from London to St. Edmund's, via Cambridge and Lynn. The surrounding country is most attractive, the locality was famous for salubrity, the chalk and sand cliffs are bold and picturesque; the sea beach and sands are unequalled, and the fresh water in excellent. There is a chalybeate spring within a mile. The sewers are already laid down by the freeholder, under the best engineering advice, and the roads are made The existing accommodation is utterly insufficient for the summer and autumn visitors. Model drawings and specifications, according to which several houses have already been erected, can be seen, and all further information obtained, on application to Mr. C. W. PREEDY, at Hunstanton; Mr. F. PREEDY, the Architect of the Estate, No. 15, York-place, Portman-square; and of Messrs. WILLIAMS & JAMES, Solicitors, 62, Lincoln's-Inn-fields, London.

PENZANCE, CORNWALL.—The FEE SIMPLE, in hand, of NINETEEN ACRES of first-class BUILDING GROUND, all within 600 yards of the beach, and commanding full view of the sea, and adjoining the town of Penzance, will be SOLD, in lots, by AUCTION, at Penzance, on FRIDAY, JUNE 5th, 1863. The fee simple, subject to a lease now hanging on a life of eighty-one, in Six Acres of Building Ground in Penzance will be sold in lots by auction at the same time. The whole of this ground is at present under cultivation as market garden ground for early broccoli and early potato crops.—For particulars apply to RODD & CORNISH, Solicitors, Penzance
Penzance, April 23rd, 1863.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety nine years.—For plans, &c. apply by post, pre paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament
This drawdock has been closed for some years, and is now about to be re opened.
From its excellent situation and the probability of the Scotland-yard Wharfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.
A residence is attached, which may or may not be taken with the wharf or drawdock.
Apply to Mr. W. HEWETT, 84, York-road, Lambeth.

BRICK MACHINE and ENGINE for SALE.—TO BE SOLD, a BRICK MACHINE (Bulmer's & Thorpe's Patent), capable of making 15,000 bricks a day. Also a STEAM ENGINE of 8-horse power, either together or separately.—Apply to W. H. HOLMES, Westgate-street, Newcastle-on-Tyne.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

HAWLEY NEW WHARF, CAMDEN Town, N.W.—JOHN KNOWLES having supplied the principal works in Sheffield for many years with fire-bricks, fire-clay, &c. has opened the above Wharf, where he is prepared to supply every description of fire bricks, lumps, tiles, &c. direct from the Works.—Sample and price on application.—Works: Wooden Box, near Burton-on-Trent.

CUNDY'S

PATENT BRICK OVEN WINDING CHECK SEMI-CLOSE KITCHEN RANGE.

This Range will be found very superior to the close Range now in use, inasmuch as it combines the cleanliness of a close kitchener with the perfect ventilation of an open range.

The fall-down bar will be found useful for broiling purposes when the fire is low.

The Ventilator in the Oven Chimney, and also the Register, can be kept open without diminishing the efficiency of the range, thereby entirely removing the great objection and discomfort of all other close ranges, namely, the sulphurous and excessive heat in the kitchen, and the smell of cooking all over the house.

The great advantage of a brick oven is, that it absorbs the steam given out by bread or meat in the process of baking; consequently the latter is totally free from the disagreeable flavour too evident in meat baked in an iron oven.

As the fire of this range can be diminished or enlarged at pleasure, it can (when not in use for roasting) be wound up within 6 inches of the oven, and still be used for baking, also for boiling upon the hob over the oven, thereby effecting a considerable saving of coals.

THIS RANGE,—ALSO CUNDY'S PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE, and CUNDY'S PATENT COTTAGER'S KITCHENER,—can be seen in operation at the Show Rooms of THE MANUFACTURER,

WILLIAM ADDIS,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE, GRATE, AND RANGE MANUFACTURER,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

Where Mr. CUNDY can be gratuitously consulted, personally, or by letter, relative to the cure of Smoky Chimneys.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 32, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any reasonable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

RED MANSFIELD STONE,
WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

REIGATE, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the WHITE HART, Reigate, on WEDNESDAY, JUNE 3, 1863, at TWO for THREE o'clock in the afternoon, fifty LOTS of FREEHOLD BUILDING LAND, situate close to the Town on the road from Reigate Town to Brighton, with frontages to the Lesborne and Howard roads. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained about ten days before the sale of Mr. T. BUCKLAND, Church-street, Reigate; at the principal Inns in the neighbourhood; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

NEW BARNET, HERTS.—Valuable Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, JUNE 8, 1863, at TWELVE for ONE PRECISELY, EIGHTY-EIGHT LOTS of eligible FREEHOLD BUILDING LAND, land tax redeemed, situate within a few minutes' walk of the Barnet Station on the Great Northern Railway, and commanding extensive and beautiful views of the surrounding country. The Midland Railway being now open, brings the property within half an hour's ride of the City, and makes it very desirable for persons wishing to reside a short distance from town. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of Sale may be obtained about ten days before the Sale, at the Railway Hotel and Railway Tavern, New Barnet; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, London, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

OLD ASYLUM, BEDFORD.—Excellent Building Materials.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on MONDAY, JUNE 1st, 1863, at TWELVE for ONE o'clock, on the PREMISES, close to the town of Bedford, the TENIB PORTION of the excellent BUILDING MATERIALS of the said Complete Lunatic Asylum; consisting of a large quantity of York paving, 50,000 stock bricks, brick bats, fine Kelloh stone carn se (the gable), quoins, string courses, and sills, brick pier with stone caps, and gates; a quantity of well-seasoned oak, com, timber, joists, rafters, floor boards, laths, purlins, wall plates, &c.; slates for roofs, iron gate and frame, iron bars and scabversade, casements with bronze fittings, sashes in frame, doors and frames, sash and other windows, &c. &c. May be viewed on Friday and Saturday before the Sale, at Catalogues may be obtained of the Auctioneer, 14, Moorgate street, London, E.C.; of Messrs. Foreman, &c. &c.

ACTON, MIDDLESEX.—A well stocked Orchard, and two valuable Freehold Building Land, five miles from the City.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, JUNE 8, 1863, at TWELVE for ONE o'clock, in SEVENTEEN LOTS, the well stocked ORCHARD and eligible FREEHOLD BUILDING LAND, with frontages to Bollo bridge-road, near to the village of Acton. Nine-tenths of the purchase money may remain on mortgage or contract at 5 per cent., to be paid in nine years by equal half-yearly instalments, but the whole or any part of the balance may be paid off at any time with notice.—Particulars, plans, and conditions of sale may be obtained at the Inns in the neighbourhood; of Messrs. RUSSELL & DAVIS, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale

---

SALE OF PLANT.—TO ENGINEERS, MACHINISTS, CONTRACTORS, AND OTHERS.

MR. C. F. SMYRK is favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, Marlborough place, Old Kent-road, on MONDAY, JUNE 8, at TWELVE, a nearly new TRACTION-ENGINE, 25 horse power, recently at work in removing the Hampstead Reservoir, the contract being now completed; also several other powerful ENGINES, in working order, viz.—A 6-horse portable engine, by Gwynne's centrifugal pump, a 7-inch contractor's pump to work by hand and steam, a 3-throw pump with gearing and crank shaft, a Bowser and Cameron's patent pump quite new, a 6-horse steam engine and 12-feet boiler, a small donkey engine, a horse chaff cutting machine and gear with driving shaft complete, an oat mill, a mashing machine, cast pulleys, an oak and iron jack-spring chine, a gravel-sifting machine, a hoisting gear with loose and fast pulleys, tigger wheels, and break, 4-inch coleman's quoins, wrought-iron and frame lap grindstone, 1-cwt. portable forge bellows, anvil, and other effects.—May be viewed; and catalogues had three days prior, on the Premises; and of Mr. C. F. SMYRK, Auctioneer, Surveyor, and Valuer, 10, Newington place, Kennington road. S

Black Gelding, Light Spring Cart, Harness, and about 300 lots on sale to the Building Trade.—On MONDAY, JUNE 1st, at TWELVE for ONE punctually.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden terrace, Camden Town, 2,000 yellow, white, and pine BRICKS, deals, and battens; 4,000 feet of matched flooring; 125 squares of flooring; dry cut stuff, 5,000 feet quartering; 2,000 feet of die square mahogany and oak; 4,000 feet wide pine; 40 new 4-panel doors; scaffold poles, ladders; pony, cart, harness, &c.—Auction Offices, 2, Carlington-street, Hampstead-road.

GARDEN STATUARY.

MR. JAMES STEVENS is instructed to SELL by AUCTION, at CHURCH PLACE, Old Town, Clapham, Surrey, on FRIDAY, JUNE 5th, 1863, at TWELVE, a great variety of vases, statues, figures, and pedestals; fountains, dogs and lions couchant; and other ornaments for pleasure grounds. On view day previous to Sale, and catalogues of the Auctioneer, Clapham Common, S

HARROW.—A very desirable small Freehold Building Estate, most advantageously situate within half a mile of the Railway Station, with a frontage to upwards of a First class Railway Pass, and of Nomination to Harrow school.

MESSRS. EDWIN FOX & BOUSFIELD will SELL by AUCTION, at the MART, on FRIDAY, JUNE 12th, at TWELVE, in one or more lots, a valuable FREEHOLD ESTATE very desirably situate at Barrow, in the county of Middlesex, comprising about 15½ acres of eligible Building Land, possessing commanding frontages to two excellent leading roads, and affording great facilities for the erection of detached and semi-detached villa residences, with ample garden grounds, the supply of which in the neighbourhood is utterly inadequate to the demand.—May be viewed; and Plans had shortly; of R. S. CHANNOCK, Esq. Solicitor, 8, Gray's-inn-square; at the MART; and at Messrs. EDWIN FOX & BOUSFIELD'S Office, 41, Coleman-street, Bank.

NORTH LONDON RAILWAY KINGSLAND JUNCTION.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, on the PREMISES, near the Kingsland Station, early in JUNE, the excellent MATERIALS of about fifty houses and shops, by order of the Directors of the North London Railway Company.—Catalogues to be had at Offices, Kingsland road and Camden Town.

BUILDING MATERIALS, High street, Borough.

PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION, on the PREMISES, on FRIDAY, JUNE 5, at TWELVE o'clock, all the valuable BUILDING MATERIALS of a spacious House, Shop, and Premises, No. 51, High-street Branch, opposite the new street; comprising sound brick work, lead gutters and pipes, useful timber, plain and pantiles, skylights, doors, wainscoting, mantle and other chimney pieces, small iron bands, handsome plate glass in front, and sash and plate glass sashes, iron columns, stone coping and cills, stoves, and useful fittings up.—May be viewed the day previous. Catalogues had of Messrs HAWES & WILLMOTT, Auctioneers, 82, Higher-street, Borough; of EDWARD PANSON, Esq. Architect, 7A, Laurence Pountney hill; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

DOCK STREET.—Materials for Two Warehouses to clear the site for the Enlargement of the Sailors' Home.

PULLEN, HORNE, & EVERSFIELD are instructed to SELL by AUCTION on the PREMISES, on FRIDAY, JUNE 5, at TEN for ELEVEN, the MATERIALS and FITTINGS of TWO WAREHOUSES, a Dock street, London Docks; comprising about 150 squares of slating, sound timber, roofing and floor boards, doors, sashes, partitioning, panelling, stone paving, &c., and other materials. At the same time will be sold the fittings of Hilloths, walk boiler, tanks, and other plant, and No. 6 Well street.—May be viewed the day previous, and Catalogues had at the Office of E. L. BRACEBRIDGE Esq. Architect, High-street, Poplar; of Messrs. PULLEN, HORNE, & EVERSFIELD, 80, Fore street, City, and 40, Parliament-street, West minster.

THE CLIFF, SCARBOROUGH.—To BUILDERS, CONTRACTORS, &c.—Extensive Sale of Building Materials

MR. W. TASKER HART has received instructions from the Directors of the Scarborough Cliff Hotel Company, Limited, to SELL by AUCTION, on the PREMISES, on TUESDAY, JUNE 9th, the whole of the BUILDING MATERIALS, except the bricks, of the lodging or dwelling houses, Nos. 1, 2, 3, 4, 5, 6, and 7, and the two cottages situate on the east side of Sir Nicholas Cliff, and which are now being pulled down, and the materials thereof will be on the Sale of JULY, 1863; several of the houses have been built within the last eighteen years, are of a substantial character, and in the best description. Each house will be put up for sale separately. Sale to commence at ONE o'clock precisely. The whole of the houses will be open for inspection one week prior to the Sale.—Particulars of Sale and further particulars, apply to Messrs. HESP & MOODY, Solicitors, Scarborough; A. W. D. LEATHER, Esq. Solicitor, Leeds; CUTHBERT BRODRICK, Esq. Architect, Leeds, to Mr W. TASKER HART, Auctioneer, Scarborough; or at the Temporary Offices of the Company, 7, St. Nicholas Cliff, Scarborough.

BROMLEY, KENT.—Immediately adjoining the Shortlands Station, on the Mid Kent Railway, only ten miles from London Bridge.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, JULY 7th, at TWELVE, in nine Lots, of from eight to Sixteen Acres each (unless previously disposed of by private contract) the greater portion of the important and very valuable FREEHOLD BUILDING ESTATE known as Shortlands; comprising upwards of 120 acres, affording some of the most agreeable sites for building to be met with near London. Among the advantages offered are—the direct destines from the Railway, great facilities afforded by the railways for reaching all parts of the metropolis, the pure air, the plentiful supply of water, the rich scenery of the surrounding country, the beautifully undulating character of the land and its applicability for division so as to insure fine views as well as private retreats of the several properties into which it is proposed to be allotted. There can be no doubt as to the estate being one which will take very high rank in public estimation and the demand for first class houses in the district is already so great that it offers a valuable opportunity to those having a desire of entering into building operations on a large scale, as to gentlemen who may be in search of a residential estate near London. Particulars and plans (twenty days prior to sale) of Messrs. WHICHCORD, Esq. Architect, 16, Walbrook; of ROBERT RITCHIE, Esq. Architect, 7, Beaufort buildings, Strand; of Messrs. BURCHELLS, Solicitors, 5, Broad Sanctuary, Westminster; and of the Auctioneers, 83, Cheapside.

REIGATE. — Important and valuable FREEHOLD BUILDING LAND, situate near the London and Brighton Turnpike-road, on the south side of the town, being the remaining portion of the Cockshot Hill Estate.

MESSRS. NASH are instructed by the Devisees in Trust of the late John Dixon, Esq. to SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, London, on THURSDAY, the 11th day of JUNE, 1863, at TWELVE for ONE o'clock, about eight acres of valuable and highly attractive FREEHOLD BUILDING LAND, comprising the remaining portion of the Cockshot Hill Estate, having capital frontages to the south, partly to the new road connected therewith. It is elevated, being on the sand ridge, commands fine views, and is admirably adapted for the erection of first-class residences; also a FREEHOLD RESIDENCE, facing the turnpike road first in place at the moderate rent of £18 per annum, containing dining and drawing-rooms, six bed rooms, and dressing-room, attic, and convenient offices; the outbuildings include house, two-stall stable, &c.; well kept lawn and pleasure garden, and productive kitchen garden. The above estate is delightfully situate, and presents great attractions, being in a locality proverbially healthy, and the views the surrounding scenery extensive and magnificent. It is within a convenient distance of a very large, and the populous part of the South Eastern, Reigate, and Brighton lines of Railway, within an hour's ride of the City and West End, the most complete and first land, eligible for good residence, enhance these attractions to persons in search of either permanent or first-class investments.—Particulars of sale may be had at the principal inns in the neighbouring towns; at GARRAWAY'S, Change-alley, E.C.; of Messrs. MAPLES, BLAKE, & PEAKE, Solicitors, 50, Frederick place, Old Jewry, E.C.; of Messrs. CLUTTON, Surveyors, 5, Whitehall-place, S.W.; and of Messrs. NASH, Land Agents, Valuers, and Auctioneers, Reigate, Surrey

---

SURREY.—Very Eligible Building Land, at Walton, a beautiful open and healthful locality, 1½ mile from the line of the South Western Railway, 21 minutes' ride from London.

MESSRS. RUSHWORTH, JARVIS, & ABBOTT are instructed to announce for SALE by AUCTION, on FRIDAY, JUNE 26th (unless previously disposed of), about 125 acres of FREEHOLD BUILDING LAND, part of the Ashley Park Estate, extending from the railway station towards the town of Walton upon-Thames, a distance of about a mile and a quarter by the direct road, and occupying nearly the entire frontage. Besides very extensive and valuable frontages to the main roads in other directions. This land, which is all of a dry sound and gravelly soil, might be brought into immediate operation as sites for gentlemen's residences of the first class, and presents a highly important and most attractive building property, worthy the attention of large capitalists as a sound and lucrative investment. Particulars may be had by the successful result of the building operations which have taken place on the Oatlands-park Estate adjoining, though at a greater distance from the metropolis, and further from railway accommodation. The land is now divided via the, and is remarkable for beautiful plantations and trees from 30 to 50 years' growth, available in laying out the ground for first class villa residences, which are not to be sought for in this locality, and from the proximity to the railway station would readily secure tenants.—Further particulars may be obtained at the Offices of Messrs. RUSHWORTH, JARVIS, & ABBOTT, Land Surveyors and Auctioneers, Station-row, Regent-street, W. and 10, Change-alley, Cornhill, E.C. who are authorised to negotiate a sale by private treaty.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of about 500 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton-road), in the following Marbles, viz:—statuary, Rouge Royal, Blue Jean, black Egyptian, black Brazils, Dove, California, St. Ann's, Rouge Jasper, Jeune Fleure, Brocatella, Genoa green, Irish Green, Blue Belge, Emperor's bed, Irish Basil, Campaine Melange, Vein, Sicilian, and various excellent specimens of British Marbles, varying in price from 12 los to 50l, and for economy of design, workman ship, and quality, not to be surpassed in England. Purchases to the extent of 20l and approved bills of three and four months will be taken, less 2½ per cent. cash. Purchasers from the country will be supplied with packing cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

REDHILL, Reigate, Surrey.—Valuable Freehold Building Land.

MR. THOMAS PAGE begs to announce that he has received instructions from the Proprietors to SELL by AUCTION, at the MARKET HALL, Redhill, THIS DAY, the 30th of MAY, 1863, at FOUR o'clock in the afternoon punctually, a compact and eligible FREEHOLD ESTATE, containing 3a 3r 37p situate immediately to, among the London and Brighton turnpike road, and near to Salmon Corner. The property will be advantageously divided into seven plots of building land, each having extensive frontages to the London and Brighton turnpike, and the new road set apart, and in the course of construction, from Redhill to Wray Common. The depth of each plot constitutes an extensive area of land, and sufficient for the erection of a first-class residence. Each plot will be submitted separately, and payment of a considerable portion of the purchase money may (if required) be extended over a period of years. This property is surrounded by the estates of Philip Hubbard, Esq., Woods Rogers, and Salmon Corner. The property will be delightfully situated; the surrounding scenery embracing the beautiful woods of Gatton, the distant Surrey Hills, and a highly-diversified country not to be surpassed. The neighbouring residences are of a first class character, and good roads and water abound. The railway facilities are of the most complete description, London being reached within three quarters of an hour from Redhill Junction. Numerous daily trains. It is furthermore an established fact that the demand for superior residences is, in this locality, greatly on the increase.—Particulars and conditions are contained in attractive shaped plans, are being prepared, and may be had fourteen days prior to the sale, at the "Estates Gazette" Office, Fleet-street; at the customary Inns in the neighbourhood; of CLAUD J. GREG, Esq. Solicitor; of Mr. F. BONNY, Station-road; and of Mr. T. PAGE, Surveyor and General Valuer, Redhill, Reigate.

Extensive Sale of capital Timber, 10,000 Tiles, Garden Lights, Stone Paving, Slates, and Copper.

MR. FREDERICK INDERMAUR will SELL by AUCTION on TUESDAY, at ONE, on the PREMISES, opposite the Royal Oak, Water-lane, Brixton, Surrey: comprising large fir girders, rafters, plates, and quarterings, 3,000 feet of plank, battens, and lining boards, 1,000 feet of floor boards, oak oak panelling and partitions, panel doors, sashes and frames, dresser and 4 shelves, and other articles.—May be viewed, and catalogues obtained at the Auctioneer's Office, 190, Union street, Borough.

WINCHMORE HILL WOOD—ANNUAL TIMBER SALE.

MR. A. RILLIARDS will SELL by AUCTION, in the WOOD, between Highfield and Winchmore-hill, on WEDNESDAY, JUNE 3, at ONE, 400 OAK TREES, many of large dimensions and excellent quality; six beech and twenty ash; also 3,000 oak and 1,000 larch poles, and 2,000 faggots.—May be viewed. Catalogues obtained of the Bailiff, and of the Auctioneer, Tottenham.

TO BE SOLD, in consequence of the proprietor relinquishing the business, the Stock-in-Trade, Implements, and Goodwill of an old established BUILDER'S BUSINESS; consisting of every requisite necessary for carrying on a considerable trade.—Apply, by letter, to L. L. "County Times" Office, Chertsey.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER HANGERS, &c. &c.—The WATER PROOF GLUE has been in public use upwards of seven years, and is used by coach-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Boulton, coach-makers, Glocester:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of the application, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Boulward, Portsea, for her Majesty's War Department."

Manufactory, Claudes-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos 74 and 75, Great Queen street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the office of "The Builder," No 4, York-street, in the Parish of St. Paul, Covent garden, both in the County of Middlesex.—Saturday, May 30, 1863.

The two Premiums of 250l. each have been awarded to Messrs CUNNINGHAM & AUDSLEY, Architects, Engineers, &c. No 3, Cook-street, Liverpool, the authors of the Designs bearing the motto "Labor et Honor"; and to WILLIAM FARNELL, Esq. Architect and Surveyor, 4, St. Nicholas-buildings, Newcastle-on-Tyne, the author of the Designs bearing the motto "Nobis Bene Nomine Male." The Designs will be publicly exhibited on and after MONDAY, the 8th instant, from ELEVEN a.m. to FIVE p.m. on each day. Competitors who desire to have their names published will be pleased to forward them at once to the undersigned. By order of the Directors,
Liverpool, 3rd June, 1863. A. T. SQUAREY, Secretary.

CONTRACTS.

TO STONE MASONS, MERCHANTS, and QUARRYMEN.—The Local Board of Health for the District of West Ham, in the County of Essex, require several thousand yards of GRANITE CURB, as they hereby invite TENDERS from those who may be willing to Contract with them for the supplies required in that line. Specifications and conditions may be examined, and Tenders obtained, by application to Mr MARSHALL, the Surveyor to the Board, at his Office, at Rokeby House, Stratford, E.; and Tenders are to be sent to me on or before MONDAY, JUNE 8th. By order of the Board,
CHARLES WILSON, Clerk.
Rokeby House, Stratford.

WEST HAM LOCAL BOARD of HEALTH.—The Local Board of Health for the District of West Ham, in the county of Essex, are prepared to receive TENDERS for LAYING GRANITE CURB, and also for supplying such road-metal and labour as may be required in making and repairing the streets called Stratford street, Newton street, Crawford street, Suburban street, Arkwright-street, Fulton street, Brunc-street, Upper, Middle, and Lower Fox streets, Montesquieu street, Rathbone street, Pitt-street, Burke street, and Clarkson-street all in Hallsville, within the district, according to plans, sections, specifications, and conditions prepared by Mr. MARSHALL, the Surveyor of the Board, and which may be seen at his Office, at Rokeby House, in Stratford, where also forms of Tender may be obtained, together with any further information required. Tenders, endorsed "Tender for Roads," are to be sent to me, on or before MONDAY, the 8th of JUNE next.—By order of the Board,
CHARLES WILSON, Clerk.
Rokeby House, Stratford

TO BUILDERS, &c.—CONTRACTS for a CHURCH.—TENDERS are required for the ERECTION of a CHURCH, at Cockermouth, in the county of Cumberland. Plans and specification will be deposited with Mr JOS HEWSON, Sun Hotel, Market place, Cockermouth, on and after TUESDAY, the 2nd of JUNE. Sealed Tenders, marked "Tenders for New Church," will be received by the Rev. H. L. FEXLEY, Cockermouth, up to WEDNESDAY, 24th JUNE, who will not be bound to accept the lowest or any Tender.—Further information that may be required, may be had on application to Mr. BRUCE, Architect, Whitehaven.

SOUTHEND GASLIGHT and COKE COMPANY.—The Directors of the above Company are prepared to receive TENDERS for a 40 feet GASHOLDER and GUIDE FRAME, and also for a BRICK TANK to contain the same. The plans and specification may be seen on application to Mr. JAB. Z CHURCH, C.E. Chelmsford, to whom the Tenders are to be sent, on or before the 10th of JUNE. The work is divided into two contracts—Builder's Work and Ironwork. The Directors do not bind themselves to accept the lowest or any Tender.—By order,
J. B. BRASIER, Secretary.
Gas Company's Office, Southend, May 27, 1863.

NEW GAOL for the HUNDRED of SALFORD To BUILDERS. The Committee of Justices for erecting a New Gaol for the Hundred of Salford, will shortly be prepared to receive TENDERS for the whole of the WORKS required in the CONSTRUCTION of the GAOL, on a plot of land adjoining the Manchester Assize Courts. The plans and specifications may be inspected, and general conditions and bills of quantities obtained, on a deposit of 2l. (to be returned in each case for the Tender), at the Offices of the Architect, Mr ALFRED WATERHOUSE, Royal Insurance-buildings, King street, Manchester, on and after the 1st of JUNE next; and sealed Tenders must be delivered to me on or before the 1st of JULY next. The Justices do not pledge themselves to accept the lowest or any Tender.
FREDCK. C. HULTON, Clerk to the Committee.
New Bailey-street, Salford, May 14, 1863.

CONTRACTS.

FERDINAND BRAND, Comptroller.

[For remainder of Contracts see next Page.

CONTRACTS.

LONDON, BRIGHTON, and SOUTH COAST RAILWAY. To BUILDERS.—CONTRACT for STATION BUILDINGS.—The Directors of the London, Brighton, and South Coast Railway Company are prepared to receive TENDERS for the ERECTION of the STATION BUILDINGS, and other works, and LABOURERS' COTTAGES, at Seaford, at the Terminus of the Branch Railway now in course of construction from Newhaven to Seaford, in the county of Sussex. Drawings and specifications may be seen and copies of the quantities obtained at the Engineer's office, Longon, Brighton Terminus, on and after MONDAY, the 1st of JUNE next, also at the Station at Seaford, on and after the 8th of JUNE next. Tenders to be sent in, addressed to the undersigned, on or before NOON on MONDAY the 8th of JUNE next. The Directors will not be bound to accept the lowest or any Tender.

London Bridge Terminus, May 27, 1863.

BLACKFRIARS BRIDGE. — Notice is hereby given that the Bridge House Estate Committee will meet at the Guildhall, on TUESDAY, the 16th day of JUNE next instead of the 9th, day of JUNE, as previously advertised, to receive TENDERS for the ERECTION of a TEMPORARY BRIDGE across the River Thames, on the west side, and parallel to, the existing Blackfriars Bridge. The plans of the intended Bridge may be seen during any of the Works of Assistant Engineer's clerk, and further particulars, and a specification at the Office of the Engineer, JOSEPH CUBITT, Esq., No. 5, Great George-street, Westminster. The Tenders are to be delivered, sealed, at the Guildhall, before 12 o'clock on TUESDAY, the 16th JUNE, addressed to the Chairman of the Committee, endorsed "Tender for Temporary Bridge." The Committee, or such other Committee as may be appointed by the Court of Common Council, will meet at the Guildhall, on WEDNESDAY, the 17th JUNE, at 11 o'clock, when the Tenders will be opened, and the contract is expected to be immediately entered into. Each Tender must be accompanied by the name and address of one person who will become bound with the party tendering, in the sum of £10,000, for the due performance of the contract. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in.

FERDINAND BRAND, Comptroller.

Guildhall, 18th May, 1863.

COUNTY of SURREY.—BRIDGE over the RIVER WEY.—Notice is hereby given, on the part of the Justices of the County assembled in Superior Court, that the CONSTRUCTION of a CAST IRON BRIDGE of Three Arches over the River Wey, together with the APPROACHES thereto, connecting a BRIDGE over the Wey at Bramley, in Guildford, with a separate TENDERS will be received for, for the IRON WORK, including Wrought Iron Piles and Screws, and for all the other Works whatsoever required for the Due struct, and for the said Bridges and the Approaches thereto, for the purpose of carrying the Highways in continuation of Woking-road and Bridge-road, including the Making and Completing of a portion of the existing Bridge for the purpose of connecting the Traffic during the Construction of the Bridges in question.—The Plans, Working Drawings, Specification, and forms of Tender may be seen at the Office hereinafter mentioned, between the hours of TEN a.m. and FIVE p.m. daily. Tenders are to be sealed up, addressed to the Clerk of the Peace, at his Office in Bridge-street, Guildford, on or before FIVE o'clock p.m. on SATURDAY, the 20th JUNE, and the Committee will not bind themselves to accept the lowest or any Tender. WORDSWORTH GREIG, Clerk of the Peace.

Record Office, North street, Lambeth, Surrey, June 1st, 1863.

BRISTOL LOCAL BOARD of HEALTH.—To PAVIORS and OTHERS.—The Local Board of Health of the City and County of Bristol hereby give Notice that they intend to CONTRACT for THREE YEARS, commencing the 29th day of SEPTEMBER next, for the performance of the undermentioned Works, viz.

CARRIAGEWAYS.

1st.—For Hauling Stones from any Place within the City and County of Bristol, and Laying Hoggin on the Streets.

2nd.—For Repairing and Re-casting Pitched Stones.

3rd.—For Hauling and Laying Road Pitching.

4th.—For Re-laying Bad Pitching.

Persons who may be engaged in the above Works are requested to deliver in their TENDERS at the Office of the said Local Board of Health, No. 14, Prince-street, on THURSDAY Morning, the 2nd day of JULY next, at TEN o'clock precisely, at which time the Committee will meet to determine upon the same. A printed specification of the Works to be done, and a Form of Tender may be personally had, either in person or by letter, post paid addressed to the Clerk, at the Office, No. 14, Prince-street, Bristol, where any further information may be obtained. Each party tendering will be required to give sufficient security, to the approval of the said Local Board, for the due and faithful performance of his Contract. The Local Board will not hold themselves bound to accept the lowest or any Tender. By order of the Committee,

JOHN G. HEAVEN, Clerk.

Local Board of Health Offices, 14, Prince-street, 11th May, 1863.

THE STRAND HOTEL COMPANY, (LIMITED).—To BUILDERS.—TENDERS are invited for the ERECTION of the above HOTEL. The drawings and conditions of Tender may be seen at the Office of the Architect, Mr. FRANCIS FOWLER, 67, Fleet-street, E.C., until FRIDAY, the 29th inst., on which day the Tenders are to be delivered and opened in the presence of the parties, at the Company's Office, at ONE. Each proposal to include all quantities for which separate prices are required to be stated, and to be returned duly sealed, by every Person who may be desirous of the Architect's Office. The Directors will not bind themselves to accept the lowest or any Tender. By order of the Board,

A. W. RAY, Secretary, 209, Strand.

Dated May 20th, 1863.

The Vestry do not bind themselves to accept the lowest or any Tender.

GEO. H. DREW, Clerk.

Vestry Office, Maltby-street, 2nd June, 1863.

PROPRIETARY COLLEGE, MALVERN.—To BUILDERS.—The Council of the Proprietary College, Malvern, are prepared to receive TENDERS for the ERECTION of the NEW COLLEGE. The plans and specifications can be seen at the Offices of the Architects, at Malvern, or Clifton, on and after THURSDAY, the 11th of JUNE. Each Tender must have been prepared by Mr. J. CLARK, of Leeds, to be sent in, the payment of one guinea. The Tenders to be delivered, under cover, to the Hon. Secretary, L. STEPHENS, Esq., M.D., Malvern, not later than TUESDAY, the 23rd of JUNE next, and marked "Tender for New College." The Council do not pledge themselves to accept the lowest or any other Tender. They will require good and approved security for the due performance of the Contract.

CHAS. HANSOM, Architect.

Clifton, May 29, 1863.

NOTICE to CONTRACTORS.—EXTENSIVE NEW WORKS at LEITH.—The Commissioners for the Harbour and Docks of Leith are prepared to receive TENDERS for the CONSTRUCTION of a RECLAMATION EMBANKMENT, Entrance Basin, Lock, Wet Docks, and relative Works, at Leith, in conformity with drawings, specification, and conditions, with form of Tender, all of which may be seen, and Proposals to accept their lowest or any Tender. The Tenders sealed and marked "Tender for New Wet Dock and Relative Works, at Leith" must be lodged with JOHN PRINGLE, Esq., Advocate, 11, Heriot-row, Edinburgh, on or before WEDNESDAY, the 1st day of JULY next.

20th May, 1863.

BUILDERS willing to TENDER for BUILDING TWO HOUSES at Chelsea, can inspect the drawings and specification, at the Office of the Architect, who reserves the right of rejecting the lowest or any Tender. Tenders are to be delivered MONDAY, JUNE 15, at TEN o'clock punctually.

HENRY M. CALLA, C.E. Architect.

Office, 2a, Westbourne-place, Eaton-square, S.W.

TO BUILDERS and CONTRACTORS.—Persons desirous of giving TENDERS for RE-BUILDING the CHURCH at PENCOMBE, near Leominster, can see the plans and specifications at the Office of the Architect. The Tenders are to be delivered to the Architect, on the 24th instant, and no pledge is given that the lowest will be accepted.

FRED'K NICHOLSON, F.I.B.A., Diocesan Architect.

Hereford, 30th June, 1863.

TO BUILDERS.—Parties willing to TENDER for the ERECTION of a PUBLIC HALL at TUNBRIDGE WELLS, in the county of Kent, may inspect the drawings at Messrs. Marshall COLBRAN'S, Esq. Tunbridge Wells. Copies of the specification [illegible] can be had on application, and Tenders to be sent to J. COLBRAN, Esq. on the 15th inst. endorsed "Tender for Public Hall." Neither the lowest nor any Tender will necessarily be accepted. Quantities by Mr. JOSEPH SIMMONS,

JAMES WILSON, F.S.A. Architect, 1, Belmont, Bath.

SAINT MARY, ISLINGTON.—To GAS FITTERS.—Notice is hereby given, that the Lighting Committee will meet at the Vestry Office, on WEDNESDAY, the 10th day of JUNE instant, at SEVEN o'clock in the Evening precisely to receive TENDERS and CONTRACT for the PAINTING and KEEPING in PAINT in REPAIR, from the 25th day of JUNE 1863, to the 25th day of JUNE 1866, the IRON RAILING, and the GAS LAMPS and PAINTING LAMP-POSTS and COLUMNS.—The Forms of Tender (which alone will be received) may be had, and particulars of the Work to be done, on and after the 1st of June, next, at the Vestry Office. Persons tendering for Contract must attend at the time and place above stated, with their Tenders sealed, and addressed "Tender for Gas Lamps." No Tender will be received after SEVEN o'clock, nor will any Tender be received unless it shall be delivered with Books of Bills and Price Work as the former, duly returned to those persons whose Tenders are not accepted, but will be returned in the other cases into the contracts successful, and in default of the Contractors being duly executed, the sums deposited shall be forfeited to the Vestry. The Vestry do not bind themselves to accept the lowest or any Tender.

JOHN LAYTON, Vestry Clerk.

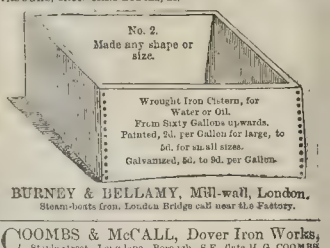
Vestry Offices, Upper-street, June 1st, 1863.

THE Directors of the Great Central Gas Company are prepared to receive TENDERS for the TAR to be manufactured by them for the year ending 1st July, 1864. Particulars as to quantity and delivery may be obtained on application to the MANAGER, at the Works, New-cross-lane. Tenders to be sent in, or before WEDNESDAY, the 10th of JUNE next, 28, Cornhill-street, E.C. May 7, 1863.

TO BUILDERS.

CONWIL, near CARMARTHEN.—Drawings and Specification may be seen, and Tenders for RESTORING the PARISH CHURCH, may be seen at Mr. EBEN EVANS's, Conwil.

Tenders to be sent on the 20th JUNE to my Office, as below. The lowest or any Tender not necessarily accepted.



JOHN P. SEDDON, Architect.

6, Westbank, London.

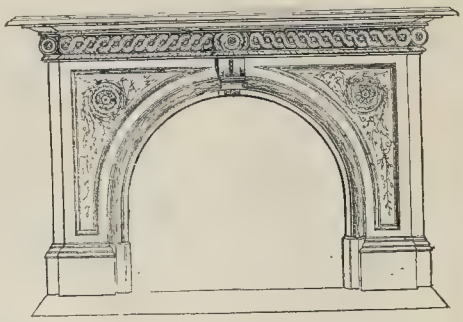
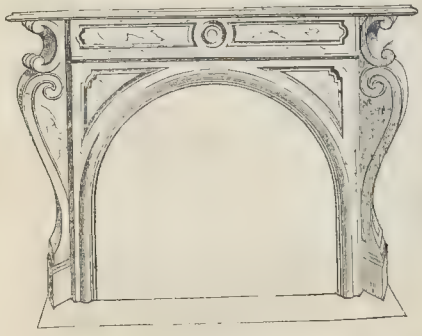
ST. PANCRAS IRON WORK COMPANY,

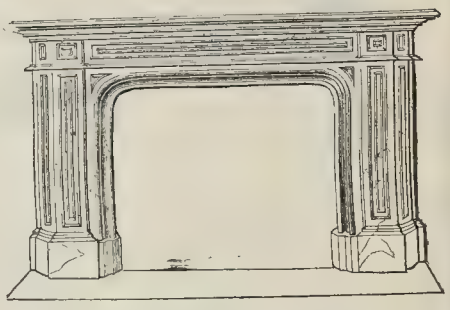
OLD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS.



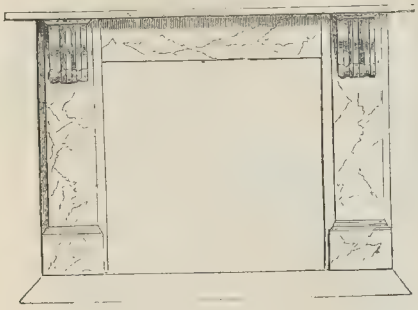
THE RICHEST ASSORTMENT OF CHIMNEY-PIECES



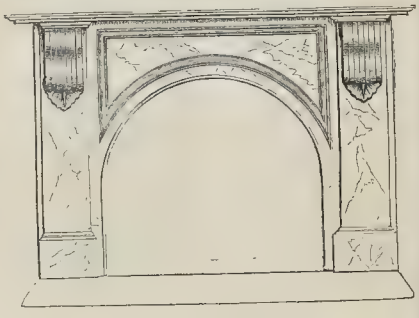
IS AT



WILLIAM S. BURTON'S.



It embraces the following Foreign and English Marbles:—Italian Statuary, Brocatelle d'Italie, Brocatelle d'Espagne, Brocatelle Brune, Griotte d'Italie, Jaune Fleuri, Vert Antique, St. Remis, Black and Gold, Black, Rouge Royale, Vein, &c. &c.; and it includes the undermentioned styles: Renaissance, Louis XIV., Louis XV., Pompadour, Louis XVI., Moderne, à Balustres, &c. &c. Most of the designs are new; while several, from their rich and exquisite sculpture, are veritable works of art. A complete assortment of Enamelled Slate Chimney-pieces is also on show, including many elegant designs. The Prices range from 1*l.* 8*s.* to 100*l.*



WILLIAM S. BURTON,

GENERAL FURNISHING IRONMONGER,

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES, SENDS A CATALOGUE GRATIS AND POST-PAID.

It contains upwards of 500 Illustrations of his illimited Stock of Sterling Silver and Electro Plate, Nickel Silver and Britannia Metal Goods, Dish Covers, Hot-Water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Cabinet Furniture, &c. with Lists of Prices and Plans of the TWENTY LARGE SHOW-ROOMS at

39, OXFORD-STREET, W.; 1, 1A, 2, 3, and 4, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE; and 1, NEWMAN-MEWS, LONDON.

ESTABLISHED 1820.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

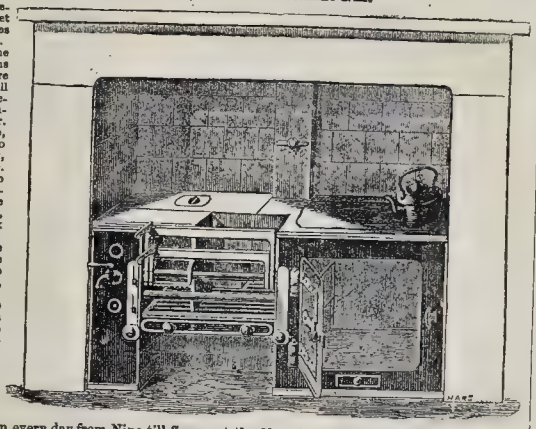
ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY.

OLD SAINT PANCRAS ROAD, LONDON, N.W.

CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.



The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.

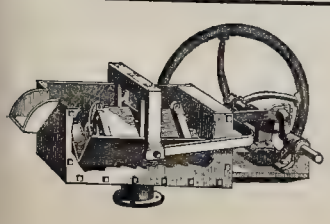
The sliding Hob, which is fastened to the Winding Cheek, also forms a Hot Plate.

The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.

This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.

This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK Warm Air Ventilating Stove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,



WILLIAM ADDIS,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,

Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.

A PROSPECTUS AND REFERENCES WILL BE FORWARDED ON APPLICATION BY LETTER.

NORTON'S

PATENT V-SHAPED PUMPS.

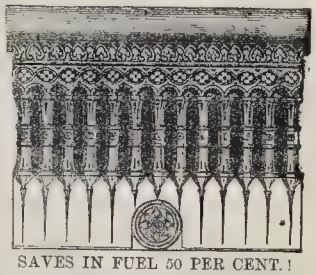
Requiring no packing. Can be worked by horse, steam, or other power.

THE ATTENTION OF ENGINEERS, AGRICULTURISTS, and OTHERS,

Is invited to a

6-HORSE DIRECT-ACTION STEAM V-SHAPED PUMP,

By Messrs. GEO. FORRESTER & CO., Liverpool, which will throw upwards of 60,000 gallons per hour.



Now on view at the Warehouse,

Agents Wanted.

West End Agents—BROWN BROTHERS, 43, Cranbourne-street, Leicester square.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ESTABLISHED 1774.

A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper, and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 5s. 6d. each.

J. H. BOOBBYER (late STURGIS & BOOBBYER), established nearly 20 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.

14, Stanhope-street, Clare market, London.

ROOFING METAL

(WETTERSTEDT'S PATENT),

In sheets 2lb. and 3lb. per square foot, 9 feet long by 3 feet wide.

The most durable and economical metal for roofing.

Does not rust or decay under the action of the atmosphere or acids.

For price, particulars, &c. apply to the Manufacturers,

W. W. & R. JOHNSON & SONS,

WHITELEAD WORKS LIMEHOUSE, LONDON, E.

DEVAUX'S VIEILLE MONTAGNE THICK ROOFING ZINC.

This invaluable metal, if laid by Mr. TYLER on the new principle introduced by J. EDMESTON, Esq. F.I.B.A. will last as long as lead; at one third the cost.

For Prospectuses, Samples, Models, and Estimates of Works to be done with the Roofing Zinc, in large or small quantities, in Town or Country, apply to

Mr. J. W. TYLER, OFFICE—12, ABINGDON ST., WORKS, 4, WOOD ST. WESTMINSTER, S.W.

If the Metal is laid by Mr TYLER, who has become so well known among Architects and Builders, superior and careful workmanship may be depended upon, and a guarantee given for its durability, if the woodwork is prepared according to directions given.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31.—PRIZE MEDAL AWARDED FOR

BARTON'S PATENT STABLE FITTINGS

AND ENAMELLED MANGERS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to his newly erected PRACTICAL STABLE, now on view at the Manufactory, 370, Oxford-street, where an extensive Assortment of all kinds of Stable Furniture, upon the most modern and improved principles, is to be seen

The Public are cautioned against purchasing or using any Machines with infringements of Furness' Patents, the rights of which will be strictly maintained against all parties who may invade them.

THE LONDON

WARMING AND VENTILATING COMPANY,

LIMITED,

26, GREAT GEORGE-STREET, Westminster, S.W.

MANAGER, MR. WOODCOCK.

Churches, Greenhouses, Offices, and Buildings of every description warmed by means of a modification of the plans successfully used during the last five years by Mr. Goldsworthy Gurney in both Houses of Parliament.

Steam, Hot Water, Gas, and in open or enclosed fire-places, Coal and Coke, are equally available for the process.

The cost is less and the effect greater than that of any other known Plans.

The Horticulturalist will find herein an instrument of new and important powers.

The Apparatus may be seen in operation in ST. PAUL'S CATHEDRAL the various offices of the "Department of Science and Art," and at the Architectural Societies' House, 9, Conduit-street, Regent-street.

Particulars and testimonials forwarded on application.

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large sizes fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

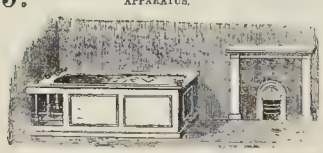
BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS, according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by G W GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

PROTECTION from LIGHTNING.—HART & SON beg to call the attention of Architects, Builders, and the Public to their IMPROVED LIGHTNING CONDUCTORS (Spratt's Patent), as presenting the most effective means of obtaining security from lightning. They are economical, easily fixed, and applicable to all buildings, including churches, chimney-shafts, breweries, powder magazines, dairies, and private houses. Price lists and estimates on application.—HART & SON, Wholesale and Manufacturing Ironmongers, 53 to 57, Wych-street, Strand, W.C. London



LIGHTNING CONDUCTORS.—R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

Three-eighths-inch diameter	1s.	0d. per foot.
Half-inch diameter	1s.	6d. "
Five-eighths-inch diameter	2s.	0d. "

R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being applied by architects, engineers, and scientific men, in all parts of the world.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

PAPIER MACHE AND CARTON PIERRE WORKS,

49, RATHBONE PLACE, W.

GEORGE JACKSON AND SONS

(Established in 1730)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV. XV. XVI. and many other styles; also rich carved and Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of all sizes, and to their varied select on of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and length ned experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them to offer a direct notice to that branch of their business.

Public buildings are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior inventions in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

VOL. XXI.—No. 1061.

Gloster or Gloucester.

THE discoveries of Roman remains in Gloster have been so numerous from time to time, as to afford positive proofs of its having been a most important Roman station and city, previous to which, from the earliest date of civilization, it had been a town of the British and Saxons, and hence the various names which it had borne under these dominations;—by the British "Caer Glowe"—the fair city; by the Saxons, "Gleaucester;" by the Latins, "Glovina;" by the Romans, "Glevum." There are some differences of opinion, as must always be the case, as to periods so remote as those we are now speaking of, and when records even at the time were so scanty; but its propinquity to the river Severn, the Forest of Dean, and its position so central in the kingdom, must at all times have rendered the spot an important and necessary one, both in a civil and military point of view. As modern Gloster exists, so was its form (we have the strongest belief), when Roman: its four straight and wide streets meet in a centre from whence a striking view of the city could be taken then, as it can be at this very day: from these diverged smaller streets or lanes, many of them, doubtless, existing at the time of the Romans; and near to the spot once occupied by a very beautiful Gothic cross,—a very shrine of Christian architecture, now, alas! removed,—once stood, it is presumed, the Roman Forum or Capitol, and it may, with a very probable conjecture, have occupied the spot upon which the present Tolsey stands: still forensic.

Hare-lane, Here-lone, or Army-lane, leading to King's Holm or Homested, is a gravelly district, chosen probably on this account for the Roman burial-place and adjacent palace. It may be a fair conjecture that this road, or that of Back Hare-lane, running parellel with it, may have been lined with tombs, as at Pompeii. Vast quantities of Roman remains have been discovered here. Stone coffins with, in some instances, a leaden one inside. One of the former weighed upwards of 3 tons. In it was found a skeleton, on the *os frontis* or forehead of which was a hole, with the appearance of having been pierced with an arrow. More than a thousand skeletons have been discovered, from time to time, on this spot. Urns filled with ashes, spears, battle-axes, and various other military weapons, parts of helmets, breast-plates, Roman steelyards, gold rings, glass beads, a very large quantity of gold, silver, and copper coins of Tiberius, Nerva, Claudius, &c.; lamps, lachrymatories, &c.

The most recent discovery of Roman remains has been that only recently brought to light by Mr. Addison, whose residence adjoins them,—and which residence, it may be observed *en passant*, was that in which the late Richard Raikes, the founder of Sunday-schools, lived and died. In digging the foundations for some buildings Mr. Addison is erecting on his premises, he observed the workmen were constantly bringing up quantities of shaped stones about an inch square. Seeing this, he at once gave directions that care should be taken in the removal of the soil; and, at about 10 feet below the present level of the earth, he came to a Roman pavement. He determined to trace this discovery as far as his right would allow him to do so, and this enabled him to lay bare a roadway of upwards of 60 feet in length and about 15 feet in breadth; but there were unquestionable evidences of its extending much farther east and west, in all probability in the latter direction to a decorated pavement now in a cellar under an ancient building attached to the church of St. Mary de Crypt, and, till lately, used as a foundation school. There are indications of this having been a residence of some consequence, and it is by no means improbable that the neighbouring church has been built upon Roman foundations. Eastward we have little doubt this roadway reaches the old city walls, not unlikely the old Roman ploughed boundary of the city: this would give a length in the whole of 750 feet. It is presumed that this was an open roadway—probably a street. It is in excellent preservation, and likely to continue so for centuries to come; for the gentleman upon whose property this very interesting discovery has been made has, at a very considerable expense, arched the whole of it over with stone, thoroughly drained the flooring, and has, in fact, made a room in which he might entertain his friends. Among the *débris* of the soil removed was found also an interesting and well-carved piece of stone-work belonging once to the adjoining church of the Black Friars. It evidently formed the centre of the springing of two arches right and left: it was as perfect as when fresh from the chisel of the mason. In corroboration of the idea that the four main streets,—namely, the North, South, East, and West,—described the form of the Roman city, it should be stated that very many remains of Roman habitations have been found running parallel with the existing streets, and directly under the *foundation* of the *present houses*, and in all cases,—we believe there was no exception,—these pavements were found to go on under the adjoining dwellings right and left; but of course discovery was limited to the one under repair or demolition. It is, therefore, no great stretch of imagination to suppose that could the whole town be laid bare, the greater part of the old Roman Glevum would be revealed to the eye. Scarcely an old house, wall, or foundation is removed; but relics, Roman, Gothic, and of later periods are found. We had brought to us, while looking on at some alterations, a crucifix in excellent preservation, of about the time of Henry VII., and some coins, not quite so well preserved. Few cities of the present day have more to boast of than Gloster, in discoveries of this kind. Mr. Lysons, of Hempstead, a gentleman well known for his devotion to art, and a nephew of the celebrated antiquary of the same name, made a very interesting discovery a few years since: on removing some old houses on which the Gloucester bank or the adjoining dwelling stands, the fragment of a stone was found; it was moulded round, forming a kind of framework to a figure of a boy, holding, as it seemed somewhat affectionately, a cat, for both hands embraced it: this fragment of Whittington (?) extended as far as the hips; but what was really very remarkable, as well as fortunate, the whole of the lower part of the figure was discovered in a garden far from the upper portion of the body; the two are now together, and form as interesting a relic as can well be imagined: the moulding on the right of the boy has been broken off. It is not generally known that Whittington's family resided in Gloster, and, as it would seem, at this very house; but, as one would take it for granted, the history of the cat is a mere fable—a mere nursery tale: the real cat, the source of his wealth, may have been his favourite vessel of that name. Mr. Arkell, an intelligent and respected builder of this town, has, much to his credit, formed a very interesting little collection of antiquities, mostly Roman. Among them will be found three horse-shoes, one of solid silver, and another has that part of the shoe which would describe the frog of the foot of the horse, partly filled up by a plate of iron, to protect this tender part from spikes or stones, thrown out by the enemy to disable the cavalry; the other shoe is entirely filled up, and it has been conjectured may have been used for the purpose of making shoes on it.

In relation to the hypothesis that the present outline of the four principal streets of modern Gloster formed the ground-plan of ancient Glevum, we will add a few evidences more in favour of it. In the cellar of Crypt School, as already stated, a Roman pavement of a dwelling has been discovered; on the *opposite side of the street* another has been met with in a house adjoining the Ram Inn; on the south side, the Westgate-street, in a house formerly occupied by Mr. Parker, some steps were found leading from the ground to an upper apartment, and the shaft of a broken Doric column; columns of freestone under houses belonging to Mr. Broughton, Miss Jones, Mr. Tooby, and the County of Gloucester Bank; in some instances Corinthian capitals have been found with them; they were about 10 feet apart, uniform in size and proportion, extending a frontage of about 180 feet:* either these pillars must have belonged to a building of immense size,—larger, perhaps, than the size of the city would lead one to expect,—or they formed a street colonade; in either case, the effect must have approached the magnificent. We rather incline to the idea that it was a street decoration; from the proportions of the fragments left, it would give a height to the pillars alone of 30 feet, and if to this be added the cornice, &c., the whole elevation must have been of considerable altitude. In the same line, reaching to the cross, other Roman remains have been found: a tesselated flooring of a room under the ancient mansion of that most celebrated of misers James Wood, commonly called Jemmy Wood. This floor extended to the adjoining house. At a house further on, and one forming the angle at the High Cross, where the four streets meet, and opposite the present Tolsey, in removing some earth at a considerable depth, the workmen came upon two very large stones, which seemed to have formed part of a gateway, as the *iron hooks* upon which the gates were hung were still remaining in the stones. They were directly opposite to what we have presumed may have been the capitol. In the Northgate-street, in making some alterations in the house of Mr. T. Mee, a tesselated pavement was dug up. In the year 1806, as the workmen were engaged in digging the foundation for the new Blue Coat Hospital, they came upon the remains of a remarkably fine Roman pavement, running, as in the other cases, in a parallel direction with the street, extending from east to west some 30 feet, and from north to south 20 feet. A very perfect specimen of this pavement is now in the possession of Mr. Bond, seedsman, of Gloster; it is 6 feet square, with a diamond-shaped border about 12 inches wide; within this border is a star filling up the whole of the remainder of the pavement, and alternately with its radiations is an oval ornament, the centre decoration of the star being a serpent. There were other rooms, or rather the flooring of them, discovered here, proving it to have been an abode of consequence; and in a direct line from it, under a large old house belonging to Sir Thomas Crawley Bary, bart., the same kind of pavement seemed to extend.

Near the old Roman road, the "Irwin-street,"

* Clarke's "Architectural History of Gloster."

in a field, was discovered, in 1820, a tombstone, and in a sunken panel is a group representing a soldier, with a legionary sword by his side and a spear in his hand, in the act of striking a naked, prostrate foe,—a Briton, most likely,—who is trying to protect himself with a sword. This monument has on its cornice a figure, apparently of a lion, at each angle; and a female figure kneeling or lying in the centre, supporting herself on her hands. At the bottom is the following inscription:—

RVFVS . SITA . EQVES . CHO . VI : TRACVM . AN : XI :
STIP : xxii HEREDES . EXS . TEST . E : CVRAVE .
H . S . E .

of which the following translation may be given: "Rufus, commissary general of the equestrian order and officer of cavalry, commanding the sixth legion, having served eleven years in the Thracian army of cavalry and twenty-two years in the army, lies buried here. This monument his heirs have carefully erected according to the terms of his will."

In the Northgate-street a votive tablet was found, having on it figures of Æsculapius and Hygeia, in excellent preservation. It is now in Gloster.

In addition to these evidences, foot-pavements have at different times been discovered running exactly parallel with the present streets, forming altogether tolerably strong evidence that the ground-plan of Roman Glevum may be found in modern Gloster. Here, as elsewhere, Christian places of worship have been built over the remains of heathen temples.

If additional evidence were required to prove that the ground-plan of the present city was pretty nearly that of the Roman one, it could be forthcoming. Accident merely has brought to light all that has been hitherto discovered; no organised plan has been hitherto adopted; indeed, from the very nature of the ground explored, such a proceeding would have been impossible; but enough has been brought to light by these casual means to show that here, in these distant domains of Rome, once stood a city not inferior, perhaps, in importance and magnificence, to some in its own native Italia.

Few cities at one time contained so many ecclesiastical edifices as Gloster. So numerous, rich, and important were they that it gave rise to the adage, "As sure as God's in Gloster." Some of these have altogether disappeared, but many very fine and interesting remains of them still exist. Taking precedence of all others would be its fine and graceful cathedral church, matchless in some of its parts, and equal to most in its remaining ones. We may hereafter give some description of this most interesting structure,—of the judicious and extensive repairs carrying on there and in the adjoining deanery. At present we will briefly notice some of the more remarkable edifices in the city, with a few observations of our own which may perchance have escaped former notice. The curious and inquiring antiquary and lover of these relics of bygone times will, like ourselves, have doubtless explored unpromising-looking avenues; dirty, out-of-the-way, forgotten passages; and have found himself, seemingly, not a very welcome wayfarer into half-public half-private domains,—a sort of debateable ground with rights not well defined, in search of remains so dear to our pursuits and tastes; and in this search the chances are that he may have hit upon some undiscovered nook, and, may be forgiven for hoping it may have escaped the eager eye of some former pilgrim and predecessor. In these rambles, sometimes alone, at other times with the companionship of a sympathising friend, have we often wandered through the remains of the Black and Grey Friars, trying hard to restore in our mind the blanks in the buildings, some of which we have been enabled thus to replace satisfactorily enough, and in others we confess ourselves to have been puzzled and lost in conjecture.

The design of the church of the Black Friars or Dominicans can at this day be sufficiently well traced. It was cruciform, and the walls of the choir and transepts are now of the same size as originally built, but the nave seems to us to have been shortened; but how it extended further west is a somewhat difficult conjecture, as there appears to have been always a passage and archway leading to what is now termed the Black Friars-square. It is by no means unlikely that this square was the seat of the cloisters, and some decorative arches in its various sides lead one very reasonably to arrive at that conclusion, and if so, the archway above alluded to may have led out of the lower part of the nave, as is often the case, into the cloisters; and in that case the difficulty as to the nave having formerly been of greater length is solved. The church must have been a fine one, for it is lofty, and of noble proportions, and the windows are, like nearly all the church windows in Gloster, of large size. The interior is now divided into many stories, and occupied as dwelling-houses. On the south side of the quadrangle is situate the scriptorium; it is 75 feet long. The south wall is divided into recesses, each recess having a small window in it. This fine large room has been termed the dormitory; and these recesses are said to have been the receptacle for the beds, but we think incorrectly: for the divisions would only allow of a bed so placed as to have the window at the head of the bed—obviously an inconvenient arrangement. We incline to think, therefore, that a seat and a desk were the furniture of this little retirement, and its occupant was engaged in the task of either copying manuscripts, reading them, or illuminating missals. There is precisely a similar arrangement in the great cloisters of the cathedral, where its use is most satisfactorily accounted for; and, indeed, in some of our university libraries, the book-cases are so arranged in blocks as to leave recesses of a similar kind,—a design well worth following in our domestic libraries, when built of sufficient size. It is possible,—indeed, very probable,—that other parts of this great room may have been occupied as a dormitory. At the west end of it is another large and lofty room, with an elegant triplet window in its gabled end, and to which we affix the name of "refectory." In stepping this room we found it to have been nearly 100 feet in length. It may have been divided: though we think not. At all events, the roof is a continuous one. In a narrow passage, made so by modern encroachments upon the old building, are the remains of some very beautiful and perfect tracery. It seems to us to have been the heading of a large square window.

Not far from the Black Friars, on the opposite side of the Southgate-street, and close upon the church of St. Mary de Crypt, stand the remains of the Augustins or Grey Friars. Here again must have been a large community. The church, a lofty and very fine one, seems to have been originally of two aisles only, as is now the case at St. Michael's, and not as it has been described, of three—a centre and two side aisles. There were seven windows in each aisle, divided by buttresses, and this strengthens our belief that the aisles were originally two, for we do not see buttresses inside a building.* These windows, with its two magnificent eastern ones, were once glorious with tracery, the greatest portion of which has only very recently been destroyed to make way for the requirements of a school. In reviewing this destruction of noble edifices—noble in their structure, if we deny even the usefulness of their original destination, or their applicability to modern wants,—one cannot but deeply regret the adaptation of them to purpose so utterly out of character with their plan and appearance. After all has been done that can be done to transform and disfigure them, to deface their original architecture, they make when so altered unsightly buildings externally, and in almost every case internally inconvenient and uncomfortable dwellings. Careful supervision of these things, and a few protecting genii at a place, might enable us to save and restore those gorgeous structures, relics of other ages, upon which so much time and wealth have been expended, so much, indeed, that we can never hope to reproduce them. Day by day, almost, have we to mourn over wanton destruction of those noble productions of our clever ancestors; our cities robbed,—for it is a robbery,—of those monuments, which might, we venture to say, be made useful embellishments to even a modern town. Few places have been richer in its architecture than Gloster, and very few have greater reason to lament over its destruction. We see mechanics' institutions, lecture-rooms, libraries, concert-halls, springing up in most country towns, and that frequently at an outlay that would more than suffice to restore these interesting and beautiful edifices to their original state; and when so replaced, it would be found that their plan was admirably adapted to such wants as those; and what we should gain in beauty of structure requires not a moment's comment. We would recommend those who may have a voice in these matters to reflect on these remarks.

Within the compass of a hundred yards of the Grey Friars is St. Mary de Crypt Church, cathedral-like in form, and grandeur of detail; on its north side are the buildings formerly occupied by the priesthood. In the chancel of this church, which, like the whole of the building, is of lofty and graceful proportions, three sedilla have been brought to light. They are of fine design. Close at hand are a piscina and credence-table. On the north side another sedile of greater pretension was found, probably intended as a seat of honour for an occasional visitor—some church dignitary.

On removing the whitewash some very superior paintings were discovered. The walls of the chancel, as well as the sedilla, appear to have been thus decorated. The first niche of the western one represents the consecration of a bell; the next the lifting of the serpent in the wilderness; the third a procession, headed by a noble presenting a chalice to an abbot, who has a retinue of monks behind him. The whole has been rich in gold and colours. The large arched panels have been filled with paintings of life-size figures. Those on the right side, looking east, can still be traced; those on the south represent the adoration of the Magi. Another subject is the ascension from the tomb, with the attendant Marys and the sleeping guards, apparently in the most accurate costume of their period. The colouring in these paintings must have presented a most brilliant appearance, for they were glowing with gilding and rich and harmonious painting. In a chapel on the north side are two oblong holes, cut obliquely through the thick stone wall, so as to enable any person there desirous of doing so, to take a peep at what was going on at the high altar. These were in the Vulgate, as all know, called "squints." At Tormarton Church is one of much larger dimensions. At St. Nicholas Church, in this city, are two of these squints, of four compartments each, in the two aisles on each side of the altar.

The tower of St. Michael's Church has much of grandeur in it. It is massive, yet rich and graceful, and owes much of this effect, we venture to assert, to the *size* of its details, which, though great, are in due proportion. And here, we trust, we may be forgiven for remarking that the want of this boldness,—this height, and depth, and shadow,—is one of the greatest defects in our modern architecture, whether Gothic or otherwise. Had some of our recent buildings had the tabernacle work fashioned after the model of the superb tower of Gloster Cathedral, they would not, notwithstanding the skill and taste exhibited in them, have that tame and somewhat uninteresting look too many of them present to the eye. Smallness of detail was generally avoided by the skilful artists of yore, and whenever or wherever it prevails, it presents a frittered and toy-like appearance. Wonderful strides have been made in our architecture of late, we are free to admit; but we are still deficient in that boldness and grandeur of *detail* so truly effective and magnificent both in the older buildings of England and on the Continental ones.

The steeple of St. Nicholas has been remarkably fine in its height, proportion, and decoration. Its style is Perpendicular. The tower has three stories, the lower one having been originally open to the nave. All three stages are remarkable for the richness of their decoration, the upper one being most so. Its beautiful octagon steeple has been reduced to nearly half its original height, from the erroneous idea that it was unsafe. The rising of the ground of the street here has been very great. You have to descend a flight of many steps into the church. This reduces the height of the spire, already shorn of its fair proportions, and dwarfs the external walls of the church. On a door in the south porch is a very remarkable knocker. The lower figure is evidently intended to represent Satan: is the upper one tasting the forbidden fruit?

The Church of St. Mary de Lode has been considered the mother church of Gloster. If this be so, the distinction can now only apply to its tower and chancel; all beyond this is modern. In a recess in the chancel is a recumbent figure, said to have been the tomb of Lucius, the first Christian king of Britain; and there seem to have been grounds for the assertion. The objection that the figure is arrayed in priestly robes would rather tend, taking into consideration his conversion from Paganism to Christianity, to favour the idea. The chancel has been well restored. It is worth a visit.

* Since these notes were penned a spiral staircase has been discovered winding up a richly-decorated buttress, which divided what we were justified in considering the two great east windows. The accidental discovery of this stair, and the tracing out some large massive piers, convince us that here stood the tower of the church, occupying what we conceived to have been a south-east window. This tower must have been of great proportions, and very probably greatly injured at the siege of Gloster, as there are marks of cannon-balls in the east end of the Crypt church, just beyond it; but as the Black Friars was nearer the walls, and covered the church of St. Mary de Crypt, it must have protected the latter, and borne the brunt of the cannonade.

There may be seen a good tower and steeple at St. John's, but the body of the church is modern.

There are one or two fair examples of modern church architecture in Gloster; amongst the most worthy of notice is a new church in Worcester-street.

The Priory of Lanthony, lying on the outside south of the city, has the remains of a fine gateway leading to it, and one of the most magnificent stone barns in the kingdom; both for its size, which is very great, and for its graceful proportions. On an eminence a little farther on was a residence of the prior, for him to retire to when the Severn overflowed the grounds of the priory below. The house was then called the New Ark, now corrupted to Newark.

The Priory of St. Oswald, latterly called St. Katherine's, has some remains worth visiting; it must have originally been a magnificent structure. Remains of the nave and side aisles may still be traced, and it would not be difficult to point out the place once occupied by its transepts and choir. Some years ago a great portion of the building was sold by auction; still enough remains to interest the antiquary, to whom the tracing out and discovery of its parts will be, as they always are, a labour of love.

There is an interesting, solitary-looking, little old building in the lower part of the left side of Worcester-street, with its grey stone and lancet windows. It is considered to have been a secular dwelling of the period, and most probably was so.

At the meeting of the four streets once stood a beautiful structure,—the High Cross, the erection of which has been attributed to Richard III. This was by no means unlikely. He took his title from the place; he was a benefactor to it, and came hither immediately after his coronation; and, it has been stated, issued his mandate for the murder of the two princes in the Tower, from Gloster. It pleases us to adopt the former belief, but not the latter. From engravings of this structure, we find it to have been octangular in shape, and divided into two stages, surmounted by a spire; but the plates differ as to its termination: one of them finishing with a kind of crown or canopy; the other one represents it in steps, with iron flags or vanes, and an upright centre. We incline to think the latter to have been the original shape, and the former an alteration: both designs are effective.

The lower stage of the cross was embellished with eight richly decorated canopied niches, containing statues of King John, Edward III., Henry III., Queen Eleanor, Richard II., and Richard III. Two former sovereigns had most likely been displaced to make room for Queen Elizabeth and Charles II. This cross we believe is still in existence in some neighbouring gentleman's park, and should, with a fine old conduit, be restored to the city. This conduit stood on the spot lately occupied as a vegetable market, but now by the Corn Exchange. It was a graceful specimen of the Early Elizabethan period, though erected in 1643 by Alderman Scriven, and called Scriven's Conduit; it was crowned with a canopy of arches of the ogee form, terminated by a figure of Aquarius. It was removed, as usual, for *improvements*, but it is fortunately preserved intact, and now in the grounds of Mr. E. Hopkinson, at Edgeworth Manor.

Though much of the domestic early architecture of Gloster has been swept away, and chiefly within the last twenty-five years, the lover of antiquity will still find much to interest him in a ramble through this old cathedral town; to enumerate all here would be somewhat out of place. A taste for such matters generally directs the ardent inquirer: he would, like a true sportsman, find out the game quickly enough; and very likely, as a stranger, beat up that which a denizen of the place might not have noticed: what we see every day is frequently but little observed. Among some of the old domestic buildings still left we would name the "New Inn" in the Northgate: here, as is generally the case elsewhere, the oldest in the place. It was the hostelry frequented by the pilgrims flocking to the shrine of Edward II., whose murder, by a most cruel death, took place in Berkeley Castle, about fifteen miles from Gloucester: the air resounded "with the shrieks of an agonized king." There is an underground passage from this inn to the Cathedral, through which the pilgrims took their way to his tomb, a magnificent structure of canopied stone tabernacle work, still in perfect preservation. An alabaster figure of the king lies on an altar tomb under this fretted canopy. The figures in the niches of the altar tomb, probably of silver, have of course long since disappeared.

The open galleries of this ancient hostel still exist, and much of its ancient Gothic and other carvings. There is a fine foliated bracket on the right side of the entrance gateway; the corresponding one has been taken away for improvements. Even still more to be admired is an angle-post of very large size, on that side of the inn running up the New Inn-lane; it springs from the ground up to the first overhanging of the building, the angle of which it supports. It has been a large beam of solid oak, carved into rich canopy and crocket work, under which stands a figure of an angel; above this is a similar one, but without the figure, supporting the second projection of that story; over this runs a length of Gothic window tracery, extending originally the whole extent of the building, which occupies a considerable portion of the lane. The extent of this inn was great; from east to west, including stalls, it measured nearly 200 feet. Lower down, at another "New Inn," which leans as much out of the perpendicular as the celebrated Tower of Pisa, is a charming specimen of a Gothic spandril—Tudor most likely—stretching across its gateway; the gate itself under it still exists, but, to all appearance, it has not been closed for a hundred years. There is an inscription in old characters, as perfect as when cut by the carver, its sheltered position having preserved it. Another hostelry of the same date, about 1450 and 1460, may still be seen in the Westgate-street, opposite St. Nicholas Church. All these are, of course, perfectly well known; but there is always a rising generation to whom these things should be pointed out. In the four principal streets of Gloster, or the cross ones, and in the lanes many old houses may yet be seen, with their projections, corbels, brackets, and carved gabels; and in recommending the artist and the lover of the picturesque to see and judge for himself, we take our leave of this ancient city, reserving a notice of the Cathedral of St. Peter and the ancient Deanery for another opportunity.

REVIEW OF DESIGNS FOR LIVERPOOL EXCHANGE BUILDINGS.*

BEFORE proceeding with our review of the plans, as much misconception exists among the public on the question, we would desire to call the attention of all those interested in the architectural success of the new Exchange, to the desirability, if not absolute necessity, of employing the successful competitor, always supposing his designs be adopted, to carry them out. So many instances of failure have occurred when the opposite course has been pursued, that it is hardly within the bounds of probability that any other but the author could do justice, more especially to the artistic portion of conceptions emanating from the individuality of his own mind. Justice, moreover, demands it. To return to our description, in which, while adhering to the regular form best calculated for reference, we have sought to illustrate, by contrast or similarity, the designs placed by us in juxtaposition. Among the first we notice in the North Room is—

"Every Man's Work shall be made Manifest," (No. 2 on the list), which contains a square inelegant news-room, with four large piers and eight sets of coupled columns supporting a square coved ceiling, lighted with glass in the coves. The mode of lighting the corridor, as in many of the other plans, is not sufficiently displayed. The underwriters' room faces South Chapel-street. The exterior is rather elegant, the windows being very simply treated, having principally square reveals. The strings and cornices possess that continuity so essential to the unity of the whole design; but the breaks in the several fronts rather tend in the opposite direction. The cornices are bracketed, and Mansard roofs and circular turrets are liberally employed in obtaining a picturesque outline. An Italian tower, of the Venetian type, in the angle, is useless, uncalled for, and quite unsuited to the character of the place. The two diminutive conical roofs over the centre block are the weakest feature of all. It is also doubtful if there be glass enough in proportion to the wall space, and the news-room is decidedly too low. The style adopted is a mixture of French and what might be termed baronial Italian.

M (9).—An original style of treatment pervades the ornamentation of this design, which approaches the Venetian manner, though a little Frenchified. There is much of merit and originality in the details; but the parts are small, and the whole would be deficient in grandeur. Three square domes are the most prominent features;—one central, over the passage into Oldhall-street; the other two at the intersection of the wings. It does not appear quite clear why or for what reason the latter have been placed there at all, for certainly a *re-entrant* angle does not require accentuation. The whole of the west wing nearly is taken up with the news-room and underwriters' room, which occupies the south-west angle. On the opposite side of the passage or vestibule, from Rumford-street to the news-room, the author has consulted the taste of the *merchant* by providing a large *bar*. There is a large vestibule to principal entrance of the news-room. The drawings are well executed, and in every way creditable. The motto "Labor omnia vincit" would be more suitable in these than in the set that bears it. In the arrangement of the general offices this plan departs from the corridor type of the previously-mentioned designs, having side entrances and staircases, and is consequently cut up into distinct blocks of offices, with no means of communication between. We can hardly approve of this arrangement as equal to the other, nor would the *public* who were forced to mount more than one flight of stairs, presuming that a man may possibly have business at the same time with more than the tenants of one set of offices. Telegraph offices are shown, arranged in alternative plans, with side and centre entrances. The interior of the news-room is shown in an excellently-coloured perspective, and possesses, notwithstanding a glass roof, a church-like character. The taste displayed in the interior *detail* is not as commendable as the execution of the drawing: indeed, we thought sufficient had been said of late against placing an insulated entablature on a column to support an arch, to have prevented any one committing that blunder for some time to come. The columns are octagonal, but too much broken in form, and the whole interior has a Rococco appearance, especially distasteful to those who look for more studied and perfect detail and ornamentation. The room has still a very gorgeous effect; but the wisdom of placing a stained-glass window where so much glass is employed in the roof, we question. The room would also be hot. Generally these drawings are well studied, and the authors deserve praise.

"Sine Labore Nil" (6).—This design, apparently, is received with great favour. The plan has been contrived on the supposition that it would be better to preserve a space for the public in the position of the present arcades. This in itself is in contravention of the published instructions, though we should hardly think the committee will be severe enough to exclude it on this account. Honest, literal, straightforward, trusting competitors have just cause of complaint when encumbered with restrictions which the committee, when it comes to the point, never insist upon. Great tact and judgment are required on behalf of the competitors to distinguish between what the committee really want and what they only think they want; and it generally occurs that the one who strikes out an original course is the most successful, simply because he shows the committee what they never thought of before; still it is very unsatisfactory working, as it were, under the *ban* of the instructions. On this head we have before now spoken. The exterior is very telling, great richness and powerful light and shade being obtained by an arcaded treatment of the first and second floors with columns supporting a massive entablature and cornice. The spandrils of the arches are profusely decorated with sculpture. The top story has a range of narrow circular-headed windows. The defect of this design is the semicircular windows of the arcade on the second floor, which, while being an inconvenient method of lighting the offices on that floor, are awkward in appearance externally. It demands very great skill in so uniting the two stories as to obtain the proportion necessary for a good order, and yet preserving the appearance of two stories without awkward and ungainly contrivances. Probably in none is this so successfully accomplished as in "Labor omnia vincit," before described. The truncated and Mansard roofs had better have been left out or made less prominent, though we must do the author the justice of saying that the sky-line is much better managed than in many that adopt that form of roof. Dormer windows are introduced in places, we presume, to light the fourth story. A central tower marks the position of the principal entrance on to the "flags." The exterior is distinguished by a certain magnificence and breadth of treatment similar to Sansovino's Venetian palaces, but the French element has crept into the roofs. The arcade would be a boon to the public, but not to the shareholders. The news-room is square on plan,

* See p. 381, *ante*.

surrounded by a colonnade, with recesses at back, of questionable utility, forming a sort of undeveloped Greek cross, the whole crowned with an immense monotonously coffered dome, overpowering the colonnade and crushing it to the ground. The disproportion between the height of the order and dome is painful, if correctly represented in the interior perspective. In such a dome, simply divided in square coffers of similar pattern, there is neither beauty nor grandeur. The underwriters' room is in the south-west corner. The arcade, it is stated, can be divided into offices if it be thought better to employ the space in that way; but an alternative design of that description looks, if executed too plainly, an afterthought. The whole exterior of the basement and ground, in the event of offices being placed in lieu of the arcade, ought to be entirely remodelled.

"Absque Labore Nihil (8).—A handsome news-room a parallelogram in form, with offices on the south side, somewhat similarly arranged to "Labor omnia vincit." The underwriters' room occupies the north side in the space devoted, in the latter plan, to a court. A recess, forming a sort of diminutive wing on either side, looking out on the flags, is left for the retiring-rooms. A lofty Venetian tower occupies the north-west re-entrant angle. The author, like most of the others, has deemed his design incomplete without the truncated roof.

"Aleph" (7).—In plan the news-room is of the nave-and-aisles type, veiled with three barrel-vaults, and belongs to the same family as "Fair-play," the recesses for conversation being formed by a continuation of the aisles in a similar manner. The offices for brokers and others are arranged in separate blocks, and are inconveniently large, and the access to them is not well planned. The exterior is of arcaded character, very little stone being used in proportion to the area of glass. A spire, square on plan, occupies the north-west angle. The angles of the wings are *accentuated*, as in most of the designs.

"Non Quo sed Quomodo" (14).—A design peculiar in having a two-story order of deep square pilasters, instead of the usual three-quarter columns. The basement is rusticated, and the structure would possess a certain dignity of character, though the elevations are too simple and plain to prove very attractive. An attic story surmounts the whole. The façade to Rumford-street is shown with a recessed portico of square columns, of almost Egyptian severity and of doubtful utility; the influence of the back colonnade of St. George's Hall being very apparent. The news-room is a parallelogram, with a surrounding colonnade and two recesses facing the flags. The square piers of the colonnade would be a material objection, and the passage or surrounding cloisters would be useless for anything but exercise.

"Enterprise" (12).—The news-room is a parallelogram running north and south,—a direction contrary to its position in most of the plans; and we cannot see that any advantage is secured by so placing it, otherwise than its presenting a longer frontage to the flags. The ceiling takes the form of a semicircular vault. The exterior is Venetian in character, and crowned with rather diminutive Mansard roofs. The central octagonal campanile is not successful in design, and the exterior is meagre. It possesses no attic story, properly so called, but dormers light the rooms in the roof. The elevation is divided into two parts, in which it differs from most of the designs,—two stories plain and two stories under one order,—the usual arrangement being rustic basement order and attic. The corridors are central.

"Fides" (11) differs from most of the exteriors in treatment, being divided into two arcades in height, each containing two stories of windows. It is rather a relief to get out of the beaten track of architraves, pediments, intervening strings, and order above order; but the nightmare roofs must of necessity appear either in one form or another, and in this plan take the form of truncated square domes, arranged by the usual recipe on flanking angular towers to each wing, the central feature of the main quadrangular front being a similar roof of a larger character. It is really extraordinary that so many competitors should have managed to hit on this arrangement, the utility of these *large* decorations being not at all apparent, or at all proportionate to the profuseness with which they have been employed. It seems to have been a general impression that they must be got in somehow; and the above arrangement most naturally suggests itself to the mind. In the plan marked "Sine Labore Nil," though truncated roofs are employed, that of the west wing is continuous, the centre being brought forward in place of the angles, it forming far the most judicious composition; and the author, in his particulars, shows that he appreciates the quadrangular form, which, as we have before stated, many of the competitors have lost sight of. The offices in the centre of the west wing, it strikes us, would be dark, having only borrowed lights to depend upon. The ceiling of the news-room is coved and groined, with flat centre, and two arcades high; the plan of the room a parallelogram, lighted by windows in the south and east façades. The author of these plans exhibits, also, an alternative scheme, in which the news-room is square, and surrounded with offices; but the square form is not well adapted for so large a room. The elevation possesses very considerable merit; but it is questionable if the style of etching with warm brown lines is the most presentable way of exhibiting its beauty. We incline to the opinion that a good sepia drawing would have exhibited it to much greater advantage.

"Cosmopolitan" (10) is distinguished from all the others by a circular reading-room, with vestibules opening out east and west. The interior is evidently suggested by the Pantheon at Rome, but cannot vie with that structure in beauty. The corridors are central. The external elevation is one of a few with three-story pilasters, a very objectionable mode of composition. It has a central campanile. On the east wing are the ubiquitous flanking towers, while (certainly an original idea) the west has only one. The underwriters' room is situate in the south-west angle. The plan seems a very elegant one.

"Fortiter et Fideliter" (17).—A very handsome domed news-room singles out this plan. Among its class it is by far the noblest, most proportionate, and tastefully decorated, and is well represented in a perspective of careful, correct, and effective drawing in ink line. Four grand semi-circular arches support a segmental dome, which again is surmounted with an eye or dome of glass, by far the most effective mode of lighting a room of that form if taken in conjunction with the side lights. A two-story arcade, artistically treated, surrounds three of the sides, and the gallery so formed would be a useful and effective feature. The pendentives are nicely graduated, from the square to the base of the dome, forming a harmoniously proportioned and lofty hall. If we contrast the treatment of this interior with that in "Sine Labore Nil," it is much to the detriment of the latter, the half-developed pendentives of which are abrupt, and appear too weak, as they really would be, were they of brick construction, to support the immense dome. The segmental form of dome is adopted from very judicious motives, allowing of longer pendentives. The court to the north of the news-room appears to throw away space merely to light the corridors. It forms a vacuity the author did not know how to employ for anything more useful. The treatment of the exterior is original, but inferior to the internal design. The flanking towers again appear, but this time surmounted with ogive domes. The central passage is also flanked with similar towers and domes, giving it the aspect of the portal of an Elizabethan court, such as we see in the domestic architecture of that period. The windows are much too small; the chimneys *outré*; and the external design not generally suitable to the site and object. The interior and exterior might have been designed by different hands, so opposite in character are they. The underwriters' room is little better than a long corridor, the author not having placed his news-room well, though this might be remedied.

"A. B. C." (16).—A very suggestive motto. The drawings appear, from the style adopted, or rather the *manner* of the style, as if they had been got up fifty years ago, to which delusion the yellowness of the paper rather adds. The news-room is the only one of its class, being divided into nine smaller squares by four columns, from which nine equal domicular vaults spring,—a mode of covering the space not possessing the charm of variety or thoughtful composition,—a mere check-plan or draftboard pattern: it looks more like the crypt of a cathedral than a room devoted to such every-day work as reading the morning papers.

"Nobis Bene Nemine Male" (20).—A one-domed reading-room of Greek-cross type, apparently a favourite arrangement with the competitors; for while the parallelograms, as might be expected, are the most numerous, this form occupies the second position. The underwriters' room is oblique, the want of parallelism in the sides of the west wing forming a difficulty that all have not been able satisfactorily to surmount, though in some of the plans this is skilfully managed, among which may be mentioned "290," which has the underwriters' room canted round parallel with Rumford-street. The area left on each side of the news-room is objectionable from the loss of space occasioned thereby. The general arrangements are simple, but we cannot class it among the best plans. The exterior presents a neat columnar front, and the author deserves credit for avoiding the usual domes. Of all the plans revelling in an abundance of light this has the most solid-looking and sensible exterior. In no plan is so much window-space provided with an avoidance of a wiry and gridiron effect. There must, of course, be plenty of light, but solidity and breadth we would not willingly dispense with. The basement is ornamented with pilasters, not rusticated as is usual; the first and second stories contained under a Corinthian order crowned with an attic story. These plans may be best described as *sensible*, the cost, no doubt, also forming an element in the author's considerations.

"Alpha" (22), contains the usual parallelogram form of news-room, with a surrounding colonnade of piers and columns combined. The interior, from the management of the colonnade, most people would mistake for a sculpture gallery. The external design is of the common French character, sporting the invincible Mansard roofs. The first and second floor windows are circular-headed. The central feature is a well-developed tower and square dome of the Tuileries type. The wings are flanked with Mansard roofs, so large as to appear jostling one another. The basement is rusticated, but there is such a similarity in the designs of this character as to make description a mere repetition of what we have before written.

"Ω" (21).—A mere screen of columns and glass, wanting in solidity and unity, but possessing a good news-room and an underwriters' room in the north-east angle (re-entrant), with an adjoining court for light. The central dome to light the news-room is supported on heavy elliptical arches, the worst form of arch for such a span. We may contrast the interior of this room with that mentioned in our description of "Fortiter et Fideleter," very much to the advantage of the latter, the graceful sweep of the dome arches and pendentives of which is so accurately delineated in accompanying perspective. The corridors are central. Had the detail drawing of a portion of the exterior been hung it would have created a much more favourable impression than is conveyed by the general elevations alone. A court and gallery occupy the east wing. The "instructions" insist upon abundance of light, but it is never satisfactory or successful to design upon *one* idea, as in this and one or two other plans. The four small courts to light the corridor are objectionable. The accompanying description is written in an educated hand, but the author is a little too much engrossed with the notion of "light! light! abundance of light!"

"Veritas" (23).—The author would have done well had he left out his written description, or have been more careful in correcting it. Probably some young and inexperienced hand has produced this set, and sent them in merely for the sake of gaining practice and experience, and we sincerely hope he may profit by it.

"Ich Dien" (18).—The author seems to have been, like a few others, unable to bear up against the "instructions" respecting abundance of light: the result, therefore, is too much of a shop-front character. The elevation is divided into basement, two-story order, and an attic; and the centre is crowned with a circular campanile. The news-room approaches the square form, covered with a barrel vault, supported by coupled columns, and surrounded by offices. A large staircase occupies the north-east angle of east wing. The architectural design is wanting in high qualities.

"Cotton" (19).—A motto, we presume, thought taking with Liverpool brokers, whose business lies so much in that direction. The news-room adjoins the flags, Rumford-street, and South Chapel-street, and the mistake of not concealing the irregularity of the site, mentioned as to "Veritas," is also here committed. The two courts north of the news-room are very objectionable, and the courts in the building facing Tithebarn-street are not less so as sacrificing valuable space. The immense square dome over central passage drowns the whole composition. Generally there is more waste of space in this plan in the shape of courts than in any of the forty-four. The interior of the news-room is not elegant, and the semi-fluted coupled columns supporting the vaulted ceiling are objectionable in point of taste. A large cornice crowns the whole, with attic windows under, the usual flanking Mansard roofs again

appearing. The elevation generally is plain in design. We must complete our review next week.

We understand the first premium, 1,000*l.*, has been awarded to Mr. T. H. Wyatt, of London; the second, 250*l.*, to Messrs. Conningham & Audsley, Liverpool; and the third, 250*l.*, to Mr. Parnell, of Newcastle-upon-Tyne.

ON THE ART COLLECTIONS AT SOUTH KENSINGTON, CONSIDERED IN REFERENCE TO ARCHITECTURE.*

IT is easy to dilate in a merely general manner on the educational influence of museums and galleries of art. Everybody agrees that such collections are important objects of national concern, as civilizing and refining agencies; and there is an implicit belief in the minds of most people, that somebody else, entire classes in fact, are making a profound and earnest use of them in directly practical ways. Few care to think of museums as mere shows or places of pleasant recreation; though in truth, ninety-nine out of a hundred use them as such. I wish I could show that our national art-collections were as extensively frequented and as intimately studied by artists as the non-professional world imagines to be the case; but unfortunately, alike amongst architects, painters, and sculptors, the systematic students of our museums and galleries are but few in number: they are, I fear, but rare exceptions to the general rule of almost contemptuous indifference.

To point out in detail the positive educational value and relation of a collection to any given art or subject of inquiry, on the other hand, is not an easy matter: to begin with, it pre-supposes in the illustrator an adequate knowledge of the particular speciality, and a perfect acquaintance with the collection in question. In reference to the former qualification, it would be the height of presumption in me to omit to bespeak the kind indulgence of such an audience as the present: in the latter respect I have more confidence, inasmuch as this collection has grown up, in great measure, under my hands.

I am, I trust, sufficiently impressed with a sense of my own inability to deal adequately with this subject, and particularly with a feeling of the vastness, complexity, and inherent difficulty of the subject of architecture in general; for, as I estimate the province of architecture as a fine art, I am obliged to confess to myself that it includes, in a greater or less degree, nearly all the other arts; and that, to grasp and fully master all its branches, would seem almost a superhuman work, scarcely possible within the limits of a life.

As we all know, this was the view of the father of architectural literature, Vitruvius; but, if the ideal architect of Vitruvius seems to us a being of impossible perfections, what must be our estimate of that great master who shall grasp the enormous mass of knowledge and precedent which has accumulated since Vitruvius's day? Doubtless there is danger of confusing ourselves with visionary and impractical ideas; in other words, of forming an overstrained estimate of the extent and limits of architecture. I am convinced, however, that there is no evil in rating any art or concern at its highest value; and I shall, therefore, adhere to the highest view of the status of the modern architect.

But there have been men who have mastered the sum of all arts and practical knowledge of their epoch;—I allude to those true universalists the great artists of the period of the Revival in Italy; to Brunelleschi, Bramante, Leonardo da Vinci, Michelangelo, Raffaelle,—all architects in the fullest sense of the term.

Under our modern system of subdivision of arts and labour, the versatility of these great men seems to us inexplicable; and we are apt to look back to them in despair as to a superior race of beings. Rather let us ask on what system were their vast powers acquired. By what previous training, for instance, was Raffaelle enabled to give to the world the beautiful Pandolfini Palace; his Madonnas and life-like portraits; the great philosophical and religious fresco pictures of the Vatican; the arabesques of the Loggie, and the marble Jonah of the Chigi Chapel?

The answer I would give is,—Less by any methodic or strictly academic system of training than by a tacit belief in the inherent unity of art, which induced a habit of studying and taking daily—nay, even hourly—note of its monuments of every kind. It is well known that the vast and varied æsthetic knowledge displayed in the works of Raffaelle, setting aside his wonderful natural aptitude, resulted from the enthusiastic zeal with which he studied the monuments of precedent art around him.

But, it may be said, what has this to do with the question of modern museums? The Vatican in Raffaelle's day was not the vast art gallery it has since become. True, but to Raffaelle Rome itself was one vast museum. It is well known that Raffaelle was one of the most enthusiastic connoisseurs of the age—an eager collector, giving up much of his precious time to the acquisition of antique remains, either for himself or the enlightened princes and prelates who were only too happy to avail themselves of his knowledge and taste; and we have evidence enough, in his drawings and sketches, that every ancient relic he acquired was a lesson to him, its particular facts of design or *technique* being assimilated in his mind, transmuted by the subtle alchemy of genius, and reproduced in new and noble guise. Now, if we are to have Raffaelles and Michelangelos in our own day, I feel convinced they must be formed in the same way.

A principal object of my lecture to-night, then, is to show, that this metropolis contains in its various collections, a vast, perhaps an unequalled treasure of works of art, far beyond anything Raffaelle or Michelangelo can have had access to; and to impress upon young students and art-workmen in particular, the fact that, with such sources of instruction, the attainment of excellence in art is freely in their power,—that there is now, indeed, no excuse for ignorance,—that, in future, there need be no more, so called, self-taught architects—no blundering, half artists—no incompetent art-workmen, unable to get out of the old hackneyed grooves,—no more complaints, in short, of want of the means of instruction.

When Lorenzo de' Medici gave Michelangelo the run of his garden filled with antique statues, the boy quickly understood that he was expected to teach himself, and that there were masters all around him, each on his pedestal,—mute marbles, it is true, and yet speaking to him with the voices of Phidias, Scopas, and Praxiteles.

Here, too, is a garden better stored than the good Lorenzo's:—here, indeed, Michelangelo teaches in his turn!

I have not the felicitous expression of your excellent president, and therefore I the more admired the just and striking manner in which, in his opening address, he made it evident that the non-acquaintance of artists with precedent monuments of art led but to a laborious travelling over old ground, to a finding out of supposed novelties, which had nothing new in them,—in short, to a constant striving without any real progress.

I cannot but think that when a man knows little or nothing of what past generations have done, he will himself produce little or nothing of good for the future: for obvious reasons, the ignorant are rarely, if ever, original: it is impossible even for the most self-reliant or indifferent artist entirely to escape the influence of the monuments of art around him; and, if he be ignorant of the historical development of art, he will only the more easily be influenced by the passing fashion; that is, he will blindly follow some favourite model, who, for aught he knows, is but an imitator himself: need I say this is the great evil of our day?

It is an old objection, that too great a familiarity with precedent art is liable to enslave and deaden the inventive faculties. I shall not stop to expose this fallacy: it is, however, true, that at the present day we have too many special devotees of special styles, of which they know but the outer husk: this comes of getting a smattering only: it is exactly what a wider and more universal range of study would prevent.

Let us then see what the South Kensington Museum in particular offers to the architectural student.

In the first place, it must be borne in mind that the Museum is but, as it were, a creation of yesterday; that the collections are still rapidly growing; that they are only provisionally arranged; and that from necessary causes they are liable to continual shifting and displacement: at present, therefore, the Art Museum must be regarded as a rich treasury, in which all may make research; in which discoveries may be made, sometimes the more interesting even from their being unexpected; but not as a completely methodised institution.

It must not, however, be supposed that these art collections have been got together without design or definite system: on the contrary, a methodic and well-understood scheme has from the first been carried out.

The museum, on its first foundation in 1852 was specially intended to serve as an adjunct and necessary complement to the Government Schools of Art,—and, generally speaking, to forward the interests of industrial or ornamental design: with the latter view the incipient collection was, of course, soon made accessible to the public, and a new national museum was founded.

Two leading principles thereupon, as it were, came to the surface, and have never since been lost sight of: the first was, that it was not desirable to trench on the province of any existing public collection; and the second, that whatever were its range or speciality, it should be developed on the widest and most liberal basis; that the collection should in fact become *the* national museum in its own speciality. Now the nation already possessed a vast and rapidly-increasing collection of works of art of the classical epochs: the arts of Greece and Rome,—of all Pagan antiquity, in short,—were well represented at the British Museum; but there they stopped. A beginning, it is true, had been made in the direction of Mediæval art, but efforts in that direction were not very kindly looked upon by the governing body of that great institution; and whilst France, for instance, with her Musée de Cluny, possessed a most valuable and practically useful collection of works of Mediæval and Renaissance art, England had taken but the first timid step in that direction.

The work to be done was thus clearly indicated; and thenceforth the creation of a collection, illustrating all art, of what we may term the modern or Christian epoch, other than painting and its accessory developments,—branches already provided for elsewhere,—was undertaken; and I think we may now point with satisfaction to the progress made in ten years' time; for at this moment we have a collection almost as much superior to the Musée de Cluny as the latter was to the Mediæval collections of the British Museum in 1852. The South Kensington Museum, then, offers to all and especially to architects, as the true masters and leaders of all industrial artists, a treasure of works of decorative art in almost every vehicle, ranging from the first timid efforts of the Byzantine artists of the early centuries, when art awoke in Europe from the night of barbarism which had eclipsed the old Roman Empire; through the successive phases of Mediæval Christian art; Gothic, as it is still convenient to term it; Renaissance, or Cinque-cento in all its varieties,—Louis Quatorze, Rococo, Barocc, &c., down to the revived Gothic of our own day, and the brilliant and facile styles of modern France.

To follow all these phases in detail would be far beyond my present limits. I am embarrassed with the abundance of materials at my choice. I have selected,—not, it is true, at random, but with great indecision,—the beautiful objects you see before you, to serve me in some respects as texts for the imperfect and discursive illustrations which are, I fear, alone possible to-night. But, in the first place, let us say a few words on the great question of the present aspect of art in reference to the revival of obsolete styles; because I fancy it will occur to some of my hearers to suppose, that I am going to advocate an eclectic system of culling forms and details from first one object and then another, from styles and local peculiarities, from characteristic features induced by specialities of material or vehicle, &c.; and so forming as it were a modern composite order of architecture. Now this is exactly what I wish to guard against; and though I fear the endeavour is beyond my skill, I am most anxious to show that this is not the true use of precedent art; and that, on the contrary, as I have said before, the wider and more liberal are the studies of the true artist, the more completely exempt will he be from the enthralling influence of obsolete styles. My wish is to show, that a close and earnest analysis of beautiful works of art will not lead to their vulgar imitation; but, on the contrary, to a healthy perception of the great principles which are as it were latent in them, and which, when truly apprehended, will exercise such a general refining and instructive influence on the student as will strengthen and invigorate his original powers, and not warp and fetter them as the weak fibre of ignorance.

There is a great chain of art, as it were, reaching down from classical antiquity almost to our own times. I say *almost*, for the only sudden breaks in the links have been in our own day, by the eclectic revivals of the present century: we are now, in fact, operating a great Renaissance. Just as, in the fifteenth and sixteenth centuries, European society at large reverted with passionate eagerness to the arts and literature of classical

* By Mr. J. C. Robinson, F.S.A., &c., read at the Architectural Museum, on the 2nd instant.

antiquity; so now we, in this present age, are reviving Mediævalism,—we are even reproducing the Renaissance itself. Unhappily, however, these revivals are for the most part only literal resuscitations of extinct styles: from what cause I scarcely know, they nearly always lack that vitality, that creative or rather transmuting force, which, in the Middle Ages, laid hold of precedent art, and gave an entirely new colouring, fresh and distinctive garbs of beauty, to old and well-known forms: it is this which we cannot do now-a-days.

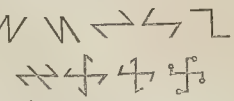
That there is great impatience of this thraldom of the styles, as I may characterize it, amongst young architects, I am quite aware; and on all hands we witness endeavours to escape from bondage; but these efforts, unfortunately too often take the shape of—earnest, it may be, but—inevitably cold-blooded attempts to achieve absolute originality. Now, I believe, there is some occult law in nature—some fatality, which makes itself felt in all such instances: whoever openly professes originality, usually achieves either novel ugliness and absurdity, or at best a new medleysome, glaring, and disjointed pasticcio.

What, then, remains for us? In plain words, how is the young architect to form a consistent and truthful style for himself? Certainly on the basis of learning and respect for previous canons:—we have already assumed this principle.

First and foremost, I hold that he must teach himself how to get professional knowledge—how to observe. Now there are two methods of looking at architectural monuments; I mean ancient buildings, and also such works of art as are on the table before us. The first is the historical or archæological view. This of course is very important to the architect: he should so critically study such works as to master their principal facts of style, in reference to their date and conditions of productions. Knowledge of this kind should underlie every other. In many ways, impossible to be specified, such knowledge will improve the practical judgment and power of the architect. Next, all these things should be studied *abstractly* or *analytically*; that is, taking up, for instance, any one of these objects; knowing, at a glance, all that is necessary about its history, origin, use, or intention. The student should ask himself, "And now what is the inherent æsthetic value of this object?" "What can I gather from it of direct use to me or my art?" "What particular facts of form, colour, materials, juxta-position of details, arrangement, contract, balance of parts, &c., can I learn from it?" "Can I assimilate, as it were, certain valuable facts embodied therein,—fortify my own perceptions thereby,—and in some future act of my art show that I have practically gained by this analysis?" Mind, I do not advocate any tedious turning and turning about, sketching, and note-writing, about every interesting specimen met with: life is scarcely long enough for this; but it is astonishing how rapidly,—intuitively as it were,—valuable facts and impressions are apprehended by the mind which has trained itself to habits of active observation and analysis of this nature: a few brief glances will then often tell the student more than he could detail in ten pages of description.

Let us take up this object, the famous Gloucester candlestick,—one of the bronze altar candlesticks of Gloucester Cathedral at about the year 1115; perhaps made at Gloucester, but more likely at Cologne.

Now, on our principle of culling knowledge from every source; if I had any particular subject uppermost in my mind, it is pretty certain I should be immediately struck with any fact or peculiarity seeming to have a bearing on that subject. Now, this is a specimen of very remarkable and indeed beautiful art in cast metal; and it strikes me that it offers valuable suggestions for the treatment of cast metal—cast-iron, I mean—employed on a grander scale; for observe how completely this utensil is architectural in treatment. Of course it was designed, and perhaps executed, by an architect,—by an artist, in short, who in all probability could have built a great minster, as well as executed its ritualistic furniture, and all with the same noble uniformity and congruity of style.



Doubtless the maker of this object was a cloistered monk, working to the glory of God in this his practical way. But let us consider this work. Have we not to all intents and purposes a rich and beautiful column, with its base and capital, intervening shaft, and central band or knop? Now it strikes me that the rich and intricate interlaced ornamentation is admirably suggestive for the modern treatment of cast-iron work. Of course, considered as a column, we might elongate its proportions to any extent, even to that of the slenderest shaft. Now the proper artistic treatment of cast-iron in architecture is a most interesting and important problem,—one that architects are bound to take serious note of; for it is certain that this material, whether we like it or not, will play a far more important part in architecture than it has hitherto done; and on the suggestive qualities of the material itself, together with a coincident reference to the peculiar treatment, the æsthetic expression, if I may so call it, of monuments in cast metal of past epochs or styles, alone, I think, can be gradually concreted the leading features of a consistent and genuine style of treatment of this new material. I have not time to dwell in detail on this matter, otherwise I could enlarge on the radical difference of artistic expression which should be made to prevail betwixt works in cast and wrought metal; how ornamentation in cast metal should not suggest carving in wood or stone; how, in consequence, it should rather be in full high relief, under-cut, or in open work, than in bas-relief; and taking up one specimen after another of different ages and schools from amongst our collections, I could show how leading principles were embodied and illustrated by them. But to show how intimately the different arts are connected with each other in the question of cast-iron ornamental architecture, we are not concerned with form alone: colour, also, forces itself strongly upon us. *We must paint iron. It cannot be left with its irregular coating of rust and dirt.* Iron architecture, moreover, naturally takes the shape of a slender framework or skeleton-shafts, girders, slender arch-bands, spandrils, string-courses, narrow horizontal fascia; and, generally speaking, a multiplicity of detail necessarily result from the physical qualities of the material; and the very meagreness, the linear character, and multiplicity of parts, at once suggest the use of colours as the natural means of giving emphasis, richness, and variety to decorative construction in this material. Here, then, at once a field of the widest and most interesting nature presents itself; and surely here, if anywhere, the trammels of bygone styles may be shaken off.

This one subject, colour as applied to interior architecture, would alone furnish ample matter for a lecture: it is a field in which precedent example will be most precious, and where, happily, this museum can boast an unequalled store of illustrative matter. For instance, there is first an admirable series of original drawings of painted wall decorations, from the principal monuments of Italian art: some of them are hung around this room; but here, again, the student must cull from indirect sources; and here, under my hand, occurs an original monument, which illustrates this theme in a very interesting manner. I allude to this splendid *chasse* or *reliquary* of the same period, and, perhaps, the same school, as the Gloucester candlestick: what, indeed, could be more suggestive than the striking contrasts of sculptured metal and brilliant colour here exhibited? How rich, and yet how harmonious and free from gaudiness are the *champlevé* enamels of this fine work. Note the admirable taste with which these miniature columns are picked out in gold and colours; each of different design, yet harmonizing perfectly one with another. Here is no want of balance; nothing fragmentary nor disturbing; no discordant contrasts interfering with the general repose or stability of the composition as a whole. In short, I cannot but regard this object, and others of similar style in our collections,—for instance, this beautiful enamelled tryptich,—as practical examples of the highest value; and I maintain that their great historical or archæological importance is at least equalled by their actual suggestive use to the art studied.*

ON GEOMETRICAL AND OTHER SYMBOLS.†

HAVING thus far paved the way for some further remarks on Freemasonic and other symbols, I must now revert, as I before proposed to do, to Mr. Godwin's very suggestive letters in the *Archæologia*; and also to what others have said of some of the symbols, including the hexalpha, not yet here treated of; before I can conclude with any suggestions of my own more especial origination on the general subject of geometrical symbols.

It will have been seen, by the selection, in my last letter, from the collection of mason-marks in the *Archæologia*, that a symbol resembling the letter N assumed a variety of modifications in the hands of the working guilds of the Freemasons. The N thus in fact becomes distorted, reversed, and compounded into a multiplicity of shapes, as for example thus;—

the exhaustion of the modifications of the simple or single N only constituting the basis of more complex modifications. Thus a straight line cuts it into its two terminal angles or halves, *as if to draw our attention to the duality and reversal of the angles:* then a second N takes the place of the dividing straight line; and we have thus the cross, combined with the terminal angles in various ways; one of which, the third last in the selection here given, is identical with a sectarian mark of the ancient Jains of India; and the last in order is a symbol known and regarded as of extremely ancient Chinese and Indian origin; and is also still in use from old times, even in this country, as a heraldic symbol; just as, by the way, the Y symbol also is, here and elsewhere, not only among laymen, such as the Conyngham family, but as "the pall," an official vestment of the Roman Catholic archbishops.

In all the varieties of the N symbol there is this one peculiarity,—that in each N there are two reversed angles, just as there are in the X or St. Andrew's Cross; and indeed in the Greek cross itself; although this latter may be regarded as showing forth a duality of decussating St. Andrew's Crosses, just as we have regarded the last three of the N symbols as displaying each a duality of these N symbols.* Here, then, in the N symbol, we have something very like an equivalent for the sexual union of the V and the Λ or feminine and masculine symbols of the Egyptians, as the true elements of this N symbol, as well as of the cross and the tau; and by putting the Λ and the V together thus ΛV, just as we did the reversed taus, of which Dr. Barlow speaks, thus $\frac{1}{T}$, we at once perceive that the N itself may be regarded as a compound symbol, made up of the Λ and the V, or masculine and feminine symbols, just as the St. Andrew's Cross also is. The more elongated forms of the N symbol, however, show this of themselves, and were probably intended, like the dividing line, to do so.

With these preliminary remarks, let us now turn again for a little to the letters of Mr. Godwin, in the *Archæologia*.

In the second of these letters, the author draws attention to a symbolical mark, which he illustrates by a drawing, from a monument at Westley Waterless, in Cambridgeshire. This mark had been called by others "a monogram probably of the artist by whom it was executed." It consists of the N symbol, flanked by a star and crescent, or sun and moon, and surmounted by a cruciform mallet or hammer. In reference to this compound mark, or "monogram," he gives a quotation from a work on Monumental Brasses, of which the following is a portion:—

"The occurrence of a similar device in two instances seems to show that it was not an individual mark. May it not have been the badge of some guild of masons? If so, it will suggest that the same minds that designed the architectural structures of the Middle Ages also designed the sepulchral monuments."

The great probability that this mark was not an individual one clearly appears, not only from the second example, which is also given, though it does not include the N symbol; but also, and chiefly, from the fact, shown by Mr. Godwin, that the N symbol itself is one of the most frequent and distinguished of mason-marks; and which, as he informs me, he has recently found, in various parts of Canterbury Cathedral, even accompanying and overriding, as it were, many other symbols;

---

* To be continued. The lecture was illustrated by a large number of rare and beautiful specimens. At the close, Mr. Beresford Hope, president, proposed in warm terms a vote of thanks to Mr. Robinson, which was carried with acclamation.

† See pp. 273 and 245, *ante*.

* The simplicity of the form of the cross, and its aptness to serve as a mere mark, of whatever kind, cannot alter *the fact* that, in all ages, and in all countries, almost, it *has* been used *as a symbol*, denotive of certain religious principles, of universal significance,—heathen and pre-Christian no less than Christian, and American or Western no less than Eastern. I may here note, by the way, as to the Greek cross, that just as the Y symbol may be regarded as the yoni, so the Greek cross, especially in an ancient form used by the kings of Jerusalem, with bulbed or rounded head and arms, may, *on a like principle*, be regarded specially as a bisexual symbol.

and in one instance curiously distorted and elongated, and crossing a straight line like a sort of angularized caduceus of Mercury.

I may also here note that on the coins of the Ariarathes, a series of Persian kings who lived before Christ,* there is not only the N symbol, but the Λ, which overrides it; the Μ, a trinity of angles, which also appears among Mr. Godwin's marks; the T;† and the hexalpha; which last, in this instance, wants the base line of the lower triangle, and is thus made to assume the shape of an oracular tripod or altar, with small circles at the ends of each line, like those on the last of the cruciform N symbols given above from the collection in the *Archæologia*. These Ariarathan symbols are associated with the figure of Minerva, on whose hand is the usual diminutive winged "Victory," as it has been called; reminding one of the Virgin and Child, and also of the Hindoo gods and their wives, whom they hold, like small dolls, in their arms. The N symbol also appears on a coin of Amyntas, king of Galatia in the time of Strabo.

In a volume of engravings printed for the Spalding Club of Scotland, representations are given of many curious sculptured stones of ancient date, on almost all of which a symbol appears, which has been called "the broken sceptre," but which I recognized as an elongated modification of the N symbol, although I was not aware of the importance and the extensive use of this symbol till I afterwards saw Mr. Godwin's collection of mason-marks in the *Archæologia*. In most instances this Scottish symbol has something analogous to the head and butt-end of a sceptre or an arrow; and in one case it is entwined with a well-defined serpent, as if it were a broken caduceus. This N symbol, or "broken sceptre," is frequently laid across what has been called a "spectacle ornament;" but I scarcely think the form in question can possibly be considered to represent anything like spectacles; because, in one example of it, the surface of each of the two discs, or rounds, is studded over with knobs, as if to represent a setting of precious stones on one side of an opaque object; and it at once struck me as more probable that what was intended to be represented might be a small double mirror, one forming a handle to the other; or, indeed, a single mirror, with a co-symmetrical handle; the studded side being the back of the mirror: and sure enough, in my hurried glance over the plates, I came at last upon a veritable *mirror and comb*, placed together, at one side, as if to show more clearly what was intended to be signified by the similar but more prominent form combined with the N symbol. This single mirror closely resembled one of the discs of the double figure or symbol. And here I may note that on a Phœnician coin, found, I believe, at Citium or Cyprus, and engraved in "Higgins's Druids," p. 117, there is, on one side, a form which very much resembles the studded mirror, but without a handle; with an E and an 8, which might stand for the comb and the double or handled mirror; and it is also notable that on the same coin there are a cross and an animal something like a hippocampus or sea-horse, both of which, or the cross at least and some such animal, also appear on the sculptured stones of Scotland. The same two things, a cross and a half mammal half fishy or reptile looking animal, but called by Mr. Hodgson, of Newcastle-upon-Tyne, a basilisc, appear together also on a mythraic sculptured slab of the Roman period, found in the north of England; and what is more remarkable still, the star and crescent, or sun and moon, as in the monumental mark given by Mr. Godwin, here also appear; the whole, moreover, being enclosed in what has been called the fire triangle, or triangle with its apex upwards. I may here also observe that on a Roman altar, found at Maryport, and engraved in Dr. Bruce's "Roman Wall" (2nd Ed., p. 377), a water-jug is surmounted by a handled mirror, just as the triangle alluded to by Dr. Barlow is surmounted by the bird drinking out of it; the symbols being, perhaps, equivalent.

This altar is inscribed on one side to the *Genius loci*, with the words *Volanti vivas* on the reverse side.

As regards the mirror and comb, there is a curious magical traditionary superstition in Scotland; namely, that if, "on Hallowmas eve, when the night hags do glide," a maiden, at midnight, proceed to a solitary apartment, with a candle, and there *comb* her hair, before a *mirror*; the vision, *image*, or apparition, of *her true lover* will show itself in the mirror. The "magic mirror," too, is a well-known article, in use even at the present day; and not only in Egypt and India, and probably in China; but in Scotland, and also in England. Among the hill tribes of India the comb is held sacred, and is given by the priests to newly married persons. The double mirror, if it be such, may be denotive of the same duality of principles as those symbolized by the two angles of the N symbol, which is always dashed across it, very much in the distorted and elongated form of that one of the N symbols recently seen by Mr. Godwin at Canterbury Cathedral, and already specially alluded to as crossing a straight line somewhat like the serpent on the caduceus of Mercury. The N symbol itself, as well as the hexalpha and other kindred symbols made up of reversed angles may also be said to bear another relation to mirrors, inasmuch as their reversed angles are *images* one of the other, *reversed*, as images are in a mirror.

Mirrors and *Images* are of peculiar significance both in magical science and in the ancient mysteries, as well as in true religion. Thus Bishop Warburton, in his "Divine Legation of Moses," speaks of the "Shining Image" of Isis ("the Midnight Sun,") which Shining Image "appeared" by night to, and in fact *in*, Lucius or Apuleius; and Warburton says it is often referred to by the mystics, as representing the divine nature in general. This Shining Image was probably imagined to be identical with that *Image* of *Glory*, or Shining Image, alluded to by St. Paul in the following singularly mystical passage:—"We all, with open face, beholding, as in a glass [or mirror] the Glory of the Lord, *are changed into* the same Image, from Glory to Glory,"—from Image to Image, or the "glorious body," or body "full of Light," just as we nightly are from sleep to sleep in the body full of darkness.

The same idea of a shining image or likeness, or a luciform body, is given in such other Scriptural passages as the following:—"We know not what we shall be; but we know that when He [the Lord, at his second coming] shall *appear*, we shall be *like* him," for "this vile body *shall be changed into* the likeness [or Shining Image] of his glorious body;" going "in and out," or "ascending and descending," from glory to glory; or, in other words, mankind shall be made or created anew, in Paradise regained, or the *inward* kingdom of heaven, in the likeness or *Image* of God, as he was in Paradise lost. The same twofold principle of life or existence, one the Image or likeness of the other, is denoted in the myth of Narcissus seeing his *Image* in the *water*, and falling *in love* with this his own ghostly double, simulacrum, counterpart, or second self,—whom, according to Plato and Aristophanes, every one is *seeking*,*—as Isis sought Osiris, Ceres Proserpine, or as the Jews and Christians seek "the Lord for the body," into whose Image of Glory,—body full of Light, or Shining Image, "as in a glass,"—the counterpart of themselves,—*in* their own physical form—they (doctrinally) desire to be daily or nightly *changed*;—"dying daily," as from their own vile body, into his glorious body, in this divine transfiguration of ecstatic entrancement and God-possession.

'Every night to this life lost; in the Spirit all safe slept;
In ecstacy entranc'd till each morning;
Beyond fell Age's reach while in Youth's fair Fountain dipp'd;
Death conquering, and Grave ever scorning.
* * * * *
Every night in lucid rest; every limb array'd in Light;
Vile bodies into glorious brighten'd:
No sun needed for THE EYE: no eye needed for THE SIGHT.
Night itself by the Glory enlighten'd.
* * * * *
Every night a holy *day*, with an Angel lover spent,
In bliss divine, at will, never failing:
Thus pervading Flesh and Blood, God, indwelling, will prevent
Disease and death from ever prevailing.'

What has just been said of *Shining Images* also reminds us of the occasional *similitude* of the Ferocher to him who is protected by this guardian angel, or "*Image* of his Soul," as Maurice, not altogether incorrectly, calls it.

Much more might be said on this curious and interesting subject;—as in reference to the mirror of Venus, called "the divine mirror," and "the mirror of the Deity;"—to the use of the mirror in the Japanese temple crypts, cells, or "caverns of initiation,"—a "significant emblem of the all-observing EYE of the God Tensio Dai Sin;" —and to the Brahminical doctrine of the Soul, in abstract contemplation and divine absorption, *becoming* "the all-pervading undivided Brahma, as the face only remains, when *the looking-glass* in which it was *reflected* has been removed."*

As the N symbols on the Scottish sculptures and on the Ariarathan and Amyntasian coins are paralleled by the N symbols of the mason-marks and of the monumental and medallion-like compound mark also engraved in the *Archæologia;* so the star and crescent, or sun and moon, of the monumental mark are paralleled by a symbol, among the Scottish sculptures, which consists of the crescent or moon, *crossed by an open angle*, somewhat as the Freemasonic *square* is symbolically crossed by the open *compasses;* and as if the angle crossing the crescent were intended to denote the rays of a sun, and therefore took the place of the sun or "day star;" suggesting also the accordance of the elongated two-angled N symbol of the Scottish sculptures, and indeed of all the N symbols, and the interlacement of angles and of triangles, such as the hexalpha, as well, with both sun and moon conjoined in one. The cruciform mallet, maul, or hammer, suggests the hammer of Thor, or "the holy maul," by means of which, like the conjunction of serpents by Mercury's rod, marriage conjunctions were said to be consecrated or effected,—perhaps as Mars and Venus were linked together by the hammer of Vulcan; the marriage, of course, being still significant of the conjunction of two principles, a masculine and a feminine, a bridegroom and a bride, as are the various modes, including the N, of conjoining the Λ and the V, such, for example, as the following:—

and many others, all of them among the mason-marks in the *Archæologia*. It is notable that the fourth symbol, reversed, and surmounted by the sphere and cross, forms part of the arms of the City of London. The diamond-shaped symbol, with its lower angle shaded or dark, and the upper one light, appears among Freemasonic symbols, representing the pavement on which the temple as an emblem stands. The ⧖ is a curious symbol, not only used by the Freemasons and by the Buddhists, as already mentioned, but also repeatedly sculptured on certain slabs found on the site of ancient Carthage, and of which Mr. Godwin gives drawings engraved in the *Archæologia*. Sometimes this symbol has one end open and the other closed; and often one end is obviously and purposely made smaller than the other. Were there space to go into such minutiæ I believe that reasons could be given for some of these and other peculiarities in Masonic symbols; such as the twist or obliquity intentionally given to many of them; the N, for example; which more generally slopes, or *falls to one side*, than stands *upright*, or "on the square;" which, however, it sometimes does, as on the Ariarathan coins, and on the monumental mark given by Mr. Godwin in the *Archæologia*. As to the ⧓ form, I may note that this symbol has since been found at Canterbury, where it appears with the angles enclosed as triangles, thus ⧓; and hence, not only suggestive of the distinct recognition of the two separate and similar angles of the St. Andrew's cross and the lama, or ⧖, as indeed the open-angled form itself and the ⧗ seen by Mr. Godwin at Canterbury are; but also closely analogous to the hexalpha; though not precisely that; since the point or apex of each triangle in the hexalpha extends beyond the base line of the associated angle. The open angled

* See Smith's Mythological Dictionary, under the head of "Ariarathes."

† Maurice, in his "Indian Antiquities," gives an engraved figure of Diana with the T on her forehead in place of the crescent or moon. Did not the reversed tau, ⊥, then, denote the (inward) sun, as the T thus seems to have denoted that moon *in human form*, which reflects the light of this sun? Such a view would accord with my suggestion that the T may have denoted "the life that now is,"—the reflex, lunar, or concentrative life; and the ⊥, "the life to come," or the solar or radiative life of entrancement, physiologically and anatomically conjoined, in our physical organism, with,—and, as I shall endeavour to show, *precisely the reverse* of,—the lunar or concentrative life, or life of the ordinary waking state: indeed, it is self-evident that a concentrative principle and a radiative principle *must* be, thus far at least, the reverse of each other.

* See letter on Symbols in *Builder* of 15th January, 1859.

* *Asiatic Journal of Bengal*, vol. xiv. p. 124. On the Vedanta Philosophy.

figure, more or less varied, as in the acuteness of the angles, also appears at Canterbury Cathedral, as on many other edifices.

Having already said a good deal on the subject of open angles, in various forms, let us now see,—thus coming a little closer to the hexalphan climax,—what has been further said of symbolical *triangles*, which we thus observe to be sometimes alternatively or co-ordinately used instead of the open angles. And here, though we are much beholden to the Freemasons, as before, for what is known or believed as to the meanings or interpretations given of all such symbols as those I am treating of; nevertheless, I must confess that I have much less faith in the interpretations or explanations of the modern Freemasons than in their traditional forms, expressions, and symbols themselves. We will also find, I think, that the interpretations are neither very consistent nor very satisfactory. Still, we are bound to give these interpretations along with others, and especially since much more, it would appear, is to be found regarding both the symbols and their explanations among the Freemasons than anywhere else.

The triangle, according to Gadicke, quoted by the Rev. Dr. Oliver, in his "Dictionary of Symbolical Masonry," is

"A geometrical figure which every Freemason knows; and he must, in particular, study that triangle which has three equal sides, or which is called an equal-sided triangle. The ancient Egyptian priests expressed the origin of all things by the triangle; and, when they afterwards wished to describe the Godhead in its various attributes, they also adopted the triangle. The kind, good, gracious, and merciful God they delineated by the water triangle, ▽; and the just and angry God by the fire triangle △. The triangle, considered as a geometrical figure, is composed of three things, which, united, form one whole; viz., of three particular points and angles, by the union of which the triangle itself is formed, as one whole or complete figure. It is for this reason that it has been adopted as the symbol of the triune God. If we unite a ▽ with a △ we have a six-pointed star ✡ as a symbol of the perfect Godhead in all His attributes and works. If we surround this figure with a circle, there will be seven points in it if we include the centre point of the circle; which represents the sacred number seven."

On this interpretation of the symbolical meaning of the triangle it may be observed, that various explanations of what the ancient Egyptians symbolically meant by it are given; and according to Oliver himself, "in the hieroglyphics of Egypt we sometimes see the suppliant presenting a triangle to his God." Surely, then, the devotee did not conceive that his triangle represented either "the origin of all things,"—"the kind, good, gracious, and merciful God,"—or "the just and angry God:" none of these could he be "presenting to his God." It is much more likely that *this* presentation was meant to denote his own human life or person, in order that it might become God possessed, or "become the God," as Iamblichus describes the true chief purpose of all their devotional acts. Oliver, also, in his masonic plates, says, —"*The equilateral triangle*, with H T in the centre, *signifies Holy Temple*; or this temple shall be holy: this triangle was cast in gold." And then, again, if the triangle "has been adopted as the symbol of the *triune* God," does the interlacement of *two* triangles, or the hexalpha, denote two triune Gods? Much more likely is it here, too; that while the one triangle may denote the nature of the Deity, or the divine Spirit, the other may denote his "holy temple" or the human nature; since the true grand purpose of all religion is the accomplishment of a conjunction of the divine nature with the human; as is implied, for example, in all such Scriptural passages as these:—"We dwell in him and he in us, because he hath given us of his Spirit" (1 John, iv. 13). "God dwelleth in him and he in God" (1 John, iv. 15). "For ye are the temple of the living God; as God hath said, I will dwell in them, and walk in them" (2 Corinth. vi. 16).

Again, the ancient Egyptians are said to have denoted ecstacy or joy by the triangle; and this they may have done on the Buddhist and mystical principle that the Deity *is* himself the Rest or Repose in ecstacy which he gives to the human soul; and "This *is* the Rest wherewith ye may cause the weary to rest! This *is* the refreshing;" for, "in returning and in rest shall ye be saved:" "Return to me *and I will return to you*, saith the Lord:" "Return to thy Rest, O my soul." But this Rest is only given by the Holy Spirit, who is "the Spirit of Rest," as well as "a Spirit of Watching;" so that, on this idea, what the Egyptians ought, properly speaking, to have meant, and what they probably did mean, was just that the triangle here referred to symbolized the divine Spirit itself; and this would be quite in accordance with the Christian symbol of a triangle, surrounded by rays, and sometimes surmounted by a dove, to show that it denoted the Holy Spirit. Kircher, therefore, is probably somewhat more correct, or less incorrect or inexplicit, when he puts it thus; that the Egyptian symbol of the Deity was *a* triangle. But we have already seen that it is probable the ancient Egyptians also denoted the human nature as well as the divine by *a* triangle. There would thus be two symbolical triangles, just *such as we find in the hexalpha of the Egyptians themselves*, as well as of their cognate religionists the Hindus, and others, denotive of the marriage conjunction of the human nature with the divine, as in God possession, or the invocation of the oracular and ecstatic Spirit in the human body, as its "holy temple." This idea of the true meaning of the hexalpha is corroborated, as we shall see, by other evidence and reasoning.

Speaking of the equilateral triangle, Maurice, in his "Indian Antiquities," says that "when *illuminated* with a single jod, this initial letter, jod, denotes the thought—the idea—of God: *it is a ray of Light*, say the enraptured Cabalists, which *darts a lustre too transcendant to be contemplated by mortal eye*." The triangle, "now called the trowel," according to Oliver, in his Signs and Symbols, "signified equally the Deity, Creation, and Fire." Elsewhere he tells us that "a single triangle, bearing the secret name of God, was given to the Israelites on Mount Horeb."

In the "Asiatic Journal of Bengal," vol. xiv., pp. 633-40, I find it stated that "among the Cabalists, as well as among others whose systems originated in the same source, *the triangle, with its apex upwards, typified fire, as did that with its apex downwards water*." This so far accords with Gadicke's intimation as to the ancient Egyptians, that "the kind, good, gracious, and merciful God they delineated by the *water* triangle ▽; and the just and angry God by the *fire* triangle △." It was the water triangle, then, or the triangle with its apex downwards, that must have denoted the ecstatic Divinity, divine Spirit, or "Living Water" with the Egyptians; and this identification of the Holy Spirit, "the Comforter" with the attributes of kindness, grace, and mercy, as the highest good, or *summum bonum*, and the beneficent refresher and restorer, of man, in this "weary world,"—while the just, and angry, or wrathful principle is something very like its antithesis, and identifiable with the Father,—accords, so far, with Christian doctrine. The Christian mystics, moreover, taught that the human soul *per se*, or without the divine illuminating Spirit, is a dark and cold principle, of the nature of the wrathful principle itself; and the arch-mystic, Jacob Behmen or Böhme, identifies this wrathful and cold yet fiery principle not only with the human soul but with the attractive force throughout all creation; and it was this view of Bohme's that is said to have led Newton to investigate the nature and law of the Cosmical principle of attraction. This fiery principle Böhme, too, calls the dark principle, while "the Divine Sophia," or Divine Wisdom, "the spouse of the Soul," he identifies with the principle of Light, as the Holy Spirit, and Sabbath of Rest; and declares that the *fire* of the *Soul* ought to be *alight* with the illuminative *Spirit*, or "wrapped up into the holy Sabbath of Rest," as St. Paul was "caught up into Paradise .... the third heaven," within him, entranced *in the highest state* of perfection; "whether in the body or out of the body," as "a glorious *church*, without spot or wrinkle;" so that here, too, on the whole, we find the conjunction of the human nature with the divine to be what the two embracing triangles of the hexalpha probably denote in the architecture of the inward man and the temple of the Lord and Master of all.

Of the hexalpha, itself, which Dr. Oliver improperly calls the pentalpha, and the pentangle, he says,—

"In the Royal Arch Degree the name of God is depicted in the centre of old floor-cloths by a double interlacing triangle, thus ✡, inscribed within a dark circle, representing unlimited space beyond the reach of light, and the top representing the Light shining in darkness, and the darkness comprehending it not. This had been used as a Christian symbol *to denote the two natures of* Jehovah *the God-man*, for centuries before the Royal Arch Degree was ever thought of. In this form ✡, or this itself ✡, it was called the pentangle or Seal of Solomon, and the Shield of David, and was employed all over Asia as a preservative against witchcraft, in which superstition the Jews are said to have participated. It constituted the Pythagorean pentalpha, and was the symbol of health."

The pentalpha proper is an interlacement of reversed triangles as well as the hexalpha; and indeed the chief difference between them is that the pentalpha is made up of one continuous line ending where it began; but, from what is said of both, the hexalpha and the pentalpha have probably both had one and the same meaning. That of "God-man" is a meaning quite in accordance with what has already been concluded as to that probable meaning. It is somewhat strange, however, that as Dr. Oliver miscalls the hexalpha the pentangle and pentalpha; so he miscalls the pentalpha the hexad. Thus, in his "Theocratic Philosophy of Freemasonry," ed. 1856, p. 147, he says:—

"The duad represented [with the Pythagoreans] Light, and the pentad darkness The hexad or triple triangle was an emblem of Health. The hexad is to this day used among the Jews."

In his "Dictionary of Symbolical Masonry," however, he quotes Stukely, who more correctly calls the "triple triangle"—as Oliver terms it,—the pentalpha, and says that it is

"A pentagonal figure called Hygeia. The Pythagoreans used it as a mystical symbol denoting Health [*mens sana in corpore sano*, doubtless, in the highest and most transcendental sense; as implying the maturing, developing, perfecting, and health-bringing influence of the Holy Spirit on the human body *possessed* by it]. And the Cabalistic Jews and Arabians had the same fancy. It is the pentalpha or pentagrammon among the Egyptians, the *mark* of *prosperity*."

The interlacement of triangles assumes other forms than either the pentalpha, the hexalpha, or the kindred symbols already treated of. Just somewhat as the N symbol becomes duplicated by one N crossing another; so the pentalphan interlacement is sometimes farther complicated, showing a complete circuit of interlacing and reversed triangles, crosses, and various other symbolical outlines, thus

An example of this form of the interlacement of triangles, of large size, Mr. Godwin informs me, may be seen with a glass on the tower of a church in Sussex.

The hexalpha, however, is by far the most universal and distinguished, as well as the simplest and clearest, form of the interlaced and reversed triangles; and hence, perhaps, it is, that *it* is the form chosen by the Freemasons, and worn on the breast or neck as a permanent symbolical "jewel" of the Royal Arch degree; the true meaning of which the highest order of Freemasons *may* understand; but assuredly this is not the case with the lower orders; and the not very clear and consistent ideas of Dr. Oliver himself say little even for his knowledge on the subject. I may here, however, quote once more, as to the hexalpha, from his voluminous Freemasonic writings.

In his "History of Initiation," at p. 45, he states that in the caverns of initiation at Salsette, in India,

"Amongst an innumerable multitude of images and symbolical figures with which the walls are covered, the linga, or phallus, was everywhere conspicuous; often alone, and sometimes ..... typified equally by the petal and calyx of the lotus, the point within the circle, *and the intersection of two equilateral triangles*."

Maurice says that, in the Hindu initiations in these caverns, the candidates were plunged in *alternate* baths of *fire* and *water*. This reminds us of the two interlaced triangles themselves, the one denotive of fire and the other of water,—the one of the wrathful, fiery, restrictive, and attractive or concentrative principle, and the other of the beneficent and radiative, expansive, and luminous principle: it also reminds us of various symbolical and mythical ideas, indicating *alternation* as well as *reversal*.

Thus Dr. Barlow describes the *alternate reversals* of the T in Tuscan ornaments. Thus, too, we obtain a similar idea of alternation and reversal from certain rude sculptures at the entrance to the "transe" or passage leading into the "sorcery hall" of the Druidical rites at New Grange, in Ireland: there we find what has been called the water symbol, but which might more properly be called the fire and water symbol, since it is just a series of reversed angles, with their apices alternately up and down; or, in fact, just a series of N or M symbols, in a connected string; each N containing, in itself, an alternation and reversal of angles;—also a similar series of St. Andrew's crosses, laid, as it were, side-long, so as to form, when the tips of the stalks of the crosses meet, a series of diamond-shaped figures, in which the

angles or the Vs and Λs, or >s and <s rather, are also alternative and reversed. It is the alternation between the human state and the divine state,—between the waking state and the "God-possessed" state of entranced repose in the divine oracular Spirit,—which these and other symbolical and emblematical ideas of alternation and reversal seem to indicate; and the alternation between the waking state and the state of sleep may be taken as a type of such an alternation and reversal of the two life states, human and divine, in conjunction.

Thus, too, the Druidical "God of Mystery," Hu, is said by the Taliesin to have "lived and died *alternately*," just as Castor and Pollux "lived and died *alternately*;" each "dying daily," a "voluntary death;" the one dying in the other's life or revival, and living in the other's death or entrancement, every other "day,"—the day of Castor and the day of Pollux,—the outward day of the human life of the waking Soul, and the (nocturnal) day of the divine life of rest in the Spirit;—so "sharing an immortality between them." In like manner Proserpine, who is called "the life and death of all men," is said to have lived a "half existence" *alternately* in the regions below, and in the regions above. It was in allusion to just such an alternation that the Druidical Taliesin said, "I went the circuit: I *slept* in a hundred isles: through a hundred caers I *toiled*: a second time was I formed: I have died: I have revived;"—and "thrice have I been born;"—that was, "first *in* the egg" of the natural life of the "ovate," or pupil of initiation; next "out of the egg" into the second birth, or bird-life of the winged God, Hu, or the entranced and bard-life of the divine oracular Spirit; and thirdly, back into human life, like the birth of a *new* egg from the new bird-life; so having "gone the circuit,"—like the Freemasonic circuit or procession *with the sun*,—a diurnal circuit, of which hundreds of thousands of similar *alternations* were but a repetition of one and the same series, of alternations and reversals, which constituted, theoretically and figuratively, but not, it is to be feared, practically speaking, the twofold or mysterious life of the fully developed or perfected, divine, and "deathless brotherhood."

In the "Symbolical Interpretation" of the Hindu "Dream of Ravan," it is said:—"Man is a duality: he comprises two modes of existence,—one natural, one *reversed*;" and, according to Scripture, "the Flesh lusteth against the Spirit, and the Spirit against the Flesh; and *these two* are *contrary* one to the other." Neander, in his work on Christian Dogmas, speaks, from ancient doctrine [see vol. i. p. 92: Bohn], of "the *alternations* of the ecstatic and common state," and of "the *contrast* between the Divine and the human;" and the French Freemason, Chevalier Ramsay, alludes to the "double" state of the perfected, as being enjoyable "by turns,"—which, in truth, they must be if they accord with the alternations and reversals of sleep and waking; and if, as we are told, the perfected or "righteous have the promise of *the life that now is and* of that which is TO COME;"—*taking* "*root downwards, and* bearing fruit upwards."

All such Scriptural ideas, and many more than these, imply that *man's perfectly developed state*, like his imperfect, is still a twofold and conjugal state, involving a diurnal *alternation* and *reversal*,—an active waking, human life, in short, together with a life of divine and glorious rest, in "one tabernacle." This idea is also clearly embodied in such passages as this:—"We that are in this tabernacle do groan, being burdened; *not* for that we would be *unclothed*, but *clothed upon*,—["with our house which is from heaven,"—"*putting on* the Lord Jesus," the true "Light of the World"], that mortality might be swallowed up of life." Thus, too, the tabernacle in the wilderness, which was the model of the Temple of Solomon, the architecture of which is the Freemasonic architecture of the inward man, comprised two places, apartments, or houses, "the heavenly house," or "most holy place," and "the earthly house," or "holy place," divided by the vail, but *bound together*, for all that, by strong bonds or bars, that the whole might constitute "one tabernacle."

I fear I must now again pause without even yet having completed my self-imposed task; but I hope the curious interest of the subject will serve as a sufficient excuse for the length of this much more extended series of remarks on geometrical and other symbols, than I thought I had materials for at the outset.

I have yet to show the *reason* why precisely such forms as those of which I have been treating were probably chosen to symbolize the principles indicated.

J. E. DOVE.

THE FREEMASONS' HALL COMPETITION.

AT a meeting of Grand Lodge, held on Wednesday evening, whereat the proceedings were of a stormy character, and lasted till the small hours of the next morning, the committee on Grand Lodge Property made a report, recommending for the first premium the design marked "*L'Union fait la Force*;" for the second, "Stability;" and for the third, "Experientia." They had advised with two professional architects, Mr. J. T. Knowles and Mr. P. C. Hardwick, who agreed with them as to the two first, but for the third substituted the design marked with two intersecting triangles coloured red and blue. The committee, however, adhered to their own recommendation, and Grand Lodge confirmed it. The names of the successful competitors are,—1, Mr. F. P. Cockerell; 2, Mr. E. M. Barry, A.R.A.; and 3, Mr. Daukes.

These names were perfectly well known to us last week,—known to every one interested; in fact, in no case has the farcical and deceptive nature of the motto-system been made more obvious. By the course that has been pursued in this competition, giving two or three of the competitors information that could not be obtained by others, great injustice has been done.

THE EXHIBITION BUILDING OF 1862.

ON Wednesday night, at the Society of Arts, after a paper read by Mr. Hawes on "Results of the Exhibition of 1862," the Duke of Cambridge in the chair, a discussion ensued between Mr. Cole and Mr. Marsh Nelson, following upon an assertion by the latter, that Mr. Cole had not duly protected the interests of the Society of Arts in the negotiations between the contractors and the Government, and upon Mr. Nelson's comparison of the space in the buildings of 1851 and 1862, the space being stated by him to be less in the latter case than the former, and upon his reference to the defects of the 1862 building, some of which, he said, were incurable. Mr. Cole was able to deny that he had had any concern whatever with the negotiations; whilst he made an opposite statement to that of Mr. Nelson as to the space. Mr. Nelson was about to reply, showing that after the removal of the *annexes*, the structure purchased would contrast, as he had said, with that of 1851, and would involve waste of public money, but was stopped by the chairman.

A supplementary Civil Service estimate has been published, showing that a vote of 172,000*l.* is to be asked for, for the "purchase of land and purchase and alteration of buildings used for the purposes of the late International Exhibition." The following are the particulars of the vote:—

	Total Estimate for the Service	Vote Required for 1863 i.	Further Amount that may be reqrd.
	£	£	£
For the purchase of land and certain buildings from her Majesty's Commissioners for the Exhibition of 1851	120,000	67,000	53,000
For the purchase of existing Exhibition buildings from the contractors	80,000	80,000	—
For repairing altering, and eventually completing the building	284,000	25,000	259,000
Total.....	484,000	172,000	312,000

It thus appears that the total cost will be about half a million.

In reply to a series of questions put in the Commons by Mr. Gregory on the subject, the Chancellor of the Exchequer gave the following statement as to the estimated value of the building and site. The value of the building itself, he remarked, can best be judged by the agreement which was made between the commissioners and the contractors for erecting the building. The price which it was agreed to pay for what is termed the use and waste—that is, the temporary occupancy of the building—was 300,000*l.*; and the price which they were to pay in addition, if they purchased the building, was 130,000*l.*, making 430,000*l.* in all. The price which we shall propose to pay to the contractors for precisely the same object as was effected by the transaction I have just described is 80,000*l.*, in lieu of 130,000*l.* The site of the Exhibition building we have agreed to purchase for 120,000*l.*, together with certain buildings used as refreshment-rooms, which belonged to the commissioners. The estimated value,—and I think the moderately estimated value,—of that site for building purposes is 280,000*l.* The result was that 710,000*l.* was the estimated value of the property for the purposes of the market and as regards the site for the purposes of the commission as it was estimated between the commission and the contractors; and that value is, by a conjunction of circumstances, to be had by her Majesty's Government for 200,000*l.*

PROVIDENT INSTITUTION OF BUILDERS' FOREMEN AND CLERKS OF WORKS.

THE anniversary dinner of this Institution was held on Wednesday evening last, at the London Tavern.

Mr. A. J. B. Beresford Hope, F.G.S., occupied the chair, and was supported by Mr. W. Lee, M.P.; Professor Donaldson, president of the Royal Institute of British Architects; Mr. Gilbert Scott, R.A.; Mr. H. Hill, governor and treasurer; Mr. G. Jennings, Mr. G. Smith, Mr. R. Thomas, Mr. Patman, Lieut. Rogers, &c.

About 150 gentlemen having sat down to dinner; on the removal of the cloth,

The Chairman proposed the usual loyal and patriotic toasts, including the army and navy, and volunteers, for which Lieut. Rogers returned thanks. Mr. W. Lee, M.P., returned thanks for the House of Commons; observing that he would much prefer to see the chairman at the festive board than his political opponent at Maidstone. The hon. member added, that he had the greatest confidence in the wisdom and sagacity of Lord Palmerston, and that in his opinion the honour and well-being of the country were secure in his hands.

The Chairman, in proposing the toast of the evening, "Prosperity to the Provident Institution of Builders' Foremen and Clerks of Works," said it was somewhat difficult to dilate upon a subject the truth of which was self-evident and which nobody felt disposed to call into question. In the present case he was persuaded that there was not a single person who heard him who was not a well-wisher of the Institution. If he were to dwell at any great length upon the social advantages which accrued from such societies, and so forth, it was just possible he might be met by the rejoinder that they were assembled on a Wednesday and not a Sunday evening, and that they had come to eat a dinner, and not to hear a sermon. He would not, therefore, sermonize, but would venture to indulge in a few commonplaces. The Institution they were met to serve was a very good one. Such an institution might be supported in many ways. Its friends might dine support, speak support, or subscribe support. The ability to dine was undoubted: the capacity to speak was granted; and, therefore, what was wanted was the particular kind of support meant by subscriptions; and they should take care that their donations were not stopped in the block between London Bridge and the Southwark branch of the London and Westminster Bank. In looking at the balance-sheet of this society, he found that it differed from many similar institutions in this respect, that they lived on their income, and not upon their capital. They might not, it was true, be able to boast of as long a list of pensioners as other societies, but they might depend upon it that when others had eaten all their dinners, and were forgotten, their society would remain, respected, trusted, and useful. He recommended them to stick to their capital; for, if they did, their capital would stick to them. He need scarcely say that he sympathized greatly with the humbler class for whom, and by whom, the Institution had been founded. There were many professions which required good health and spirits, a sound frame, and a clear head. The builders' foremen and clerks especially required a combination of those qualities; for if they were deficient in them they could be of very little use to their employers. There were a thousand things connected with the building trade that required forethought, resolution, endurance, and ingenuity. There were also the winter's snow and the summer heat; and against these the foremen and clerks of works had to contend like soldiers on a perpetual campaign. Then there were the men who conceived the great works which the hands of others called into execution: but what would the designers be without the subordinates? The architects would be like generals without officers to command their regiments, viewing the physical perils of the position which the foremen and clerks of works had to contend with, and the integrity and talent which they brought to bear in

all cases where their services were enlisted. He thought they had peculiar claims upon the sympathy, not only of architects and builders, but of the public generally. He regretted that a greater number of the architects of the metropolis were not present, but he believed that many of those who would have otherwise attended were called away to an anniversary meeting elsewhere. In conclusion, he hoped the society would long continue to prosper, and to enjoy the confidence of the class for whose benefit it was originally promoted.

The Chairman next gave the health of Mr. H. Lee, the governor and treasurer of the Institution.

Mr. Lee returned thanks, and observed upon the gratifying circumstance that the Institution had now invested the sum of 2,900*l.*

The health of the patrons and subscribers having been drunk,

Mr. Kay, the corresponding secretary, read a list of donations, which included among others the following: the Chairman, 15 guineas; Mr. T. H. Lewis, 5 guineas; Mr. Gilbert Scott, 5 guineas; Messrs. W. Cubitt & Co., 10 guineas; Mr. R. Thomas, 5 guineas; Mr. W. Ellis, 5 guineas; Mr. C. M. Foster, 5 guineas; A. Z, 5 guineas, and 2 guineas annually; Mr. Jennings, 2 guineas; Professor Donaldson, 5*l.*; Messrs. Patman & Fotheringham, 5 guineas; Mr. H. Lee, 10 guineas; Mr. G. Baker, 5*l.*; Mr. H. Fielder, 5*l.*; Mr. Currie, 5 guineas; Messrs. Hobbs, Hart, & Co., 5*l.*; Messrs. Francis (Brothers), & Pott, 5 guineas; &c.; making a total of 165*l.*, irrespective of annual subscriptions.

Mr. Scott, in proposing the health of the Chairman, spoke of the obligations which the builders were under to a gentleman of his high social position, who had devoted a quarter of a century of his useful life to the particular arts of architecture and building. No wonder, then, that the architects and builders should feel deeply grateful to one who had exhibited so much practical sympathy towards them. The Chairman had observed, with truth, that the architects and builders could do little without the assistance of the foremen and clerks of works. They it was who bore the heat and brunt of the day; and if it were not for them it would be impossible to give form and substance to the designs of the architect or the exertions of the builder. No one could better estimate the value of an able and conscientious clerk of the works, for it was his misfortune to have been deprived of one by a fall from a scaffold; a circumstance which, he could truly say, was the most painful of any associated with his professional practice. That melancholy circumstance proved the value of a provident society like that which they had met that evening to commemorate; and he was happy to say that the Institution was, in the truest sense of the word, provident; because it was only in cases of accidental disability that its funds were drawn upon.

The Chairman, having acknowledged the compliment, proposed "The Architects and Engineers," coupling with the toast the name of "the learned, accomplished, and respected Professor Donaldson."

Professor Donaldson said that he had accepted the invitation to be present that evening as a private individual, and as an architect. Since that period his brother architects had conferred upon him the highest honour which it was in their power to bestow, by electing him to the office of President of the Royal Institute of British Architects. In that capacity he now attended, because he felt he was bound to do all the honour he could to an honourable society. He was sure that the architects present would agree with him that the chief responsibilities of an architect, after his plans were accepted, were, first, to get a competent clerk of the works; and, second, to secure a builder's foreman. In point of fact, the architect, the builder, the clerk of works, and the builder's foreman, were all bound up together; and it was impossible for any great work to be carried out successfully without their hearty co-operation. In his experience he had found the clerks of works and foremen, as a class, to be men possessed of great integrity, capacity, and ingenuity; and he was bound to state that, in the whole course of his practice, he had never found it necessary to discharge one. Approving as he did entirely of the Institution, he was bound, however, to state that he would like to see something more added to the allowances made to the recipients of their bounty in excess of the 4*s.*, 5*s.*, or 6*s.* per week now awarded. On looking over the balance-sheet he found that the sum of about 140*l.* only had been paid during the last year to pensioners and members. Looking, then, to the fact that 165*l.* had been contributed that evening in donations alone, he hoped the managers of the Institution would soon find themselves in a position to make some addition to the modest stipend now paid to the pensioners. He begged, in conclusion, to propose "The builders of the day,—the leading stars of the science of construction;" and to couple with the toast the name of Mr. George Smith.

Mr. Smith returned thanks, and said he was happy to be able to boast that he began as a builder, and hoped to end one.

The Chairman next gave "The Ladies."

Other complimentary toasts followed; after which the company separated.

A selection of vocal music was performed during the evening, under the direction of Mr. Fielding, assisted by Miss Poole, Miss Rose Hersee, &c.

BLACKPOOL PIER.

A NEW pier has been constructed for Blackpool. This place lies about midway between the rivers Ribble on the south, and Wyre on the north, facing the Irish Sea, in latitude 53 deg. 15 min. N; longitude, 3 deg. 1 min. W. It is situate in the township of Layton-with-Warbrick, in the parish of Bispham, and contains a population of about 4,000 settled inhabitants, whilst in the season which lasts from May to October, the visitors add some 14,000 to 16,000 to the number sojourning in the place. During the summer months alone upwards of 200,000 persons are brought by railway to this favourite watering-place.

The pier was designed by and has been erected under the supervision of Mr. Eugenius Birch, C.E., Loudon, the engineer to whom the people of Margate owe their landing and promenade pier, which was the first sea structure of the kind composed of ironwork resting upon iron screw piles. The contractors for the pier are Messrs. R. Laidlaw & Son, of Glasgow, Edinburgh, and London. The first column of the pier was fixed in May last year.

The pier is constructed almost entirely of iron, the only woodwork employed being that used for the deck and the fender piles at the head. The following are the dimensions of the pier:—Approach, 80 feet long; abutment, 120 feet long and 45 feet wide; main portion, 1,070 feet long and 28 feet wide; and the head, 135 feet long and 55 feet wide, giving a total length of 1,405 feet available as a promenade. The entire superstructure rests upon clusters of iron piles, vertically fixed into the ground by means of screws. The piles at the abutment and main body are wholly of cast iron, and those at the head are partly of cast and partly of wrought iron. The largest of the cast-iron columns are 12 inches in diameter, and of an average thickness of 1¼th, and the whole of the columns are filled with concrete, which imparts to them additional stability as a means of support. The piles are placed in clusters, as this mode of arrangement has been found by the engineer to answer in exposed positions; for, the piles being trussed together, and well secured longitudinally, transversely, and diagonally, by the rods and braces, are capable of sustaining sudden shocks of the sea, a most important consideration at this point of the coast, where there occurs an extraordinary rise of tide of 35 feet. The clusters are placed at intervals of 60 feet; and resting upon them are the main girders, constructed of wrought iron, and in lengths of 72 feet. The description of girder employed is that commonly known as the plate girder, which, for works of this kind, where great strength is required, is undoubtedly superior to that known as the open or lattice girder. Throughout the entire length of the pier an ornamental casting surmounts the main girder; and this forms a very good back for the sitting accommodation afforded by these girders. The head of the pier stands 50 feet above low-water line, and every means have been used to give it strength and stability. The total weight of iron employed upon the pier is 760 tons, consisting of 420 tons cast, and 340 tons wrought.

CLAYTON & Co.'s NEW WORKS.—The first stone has been laid of intended extensive engineering works on the banks of the Grand Junction Canal, in rear of the Harrow-road, for the firm of Henry Clayton & Co., of the Atlas Works, London, the inventors and makers of machines for brick and tile manufacture. The new works will occupy an area of nearly two acres. The architect is Mr. R. Palgrave. The quantities were supplied by Mr. P. Wilkinson. Contractor, Mr. G. Weller; clerk of works, Mr. Coultart.

MEMORIAL OF THE GREAT EXHIBITION OF 1851, AND OF ITS FOUNDER, THE LATE PRINCE CONSORT.

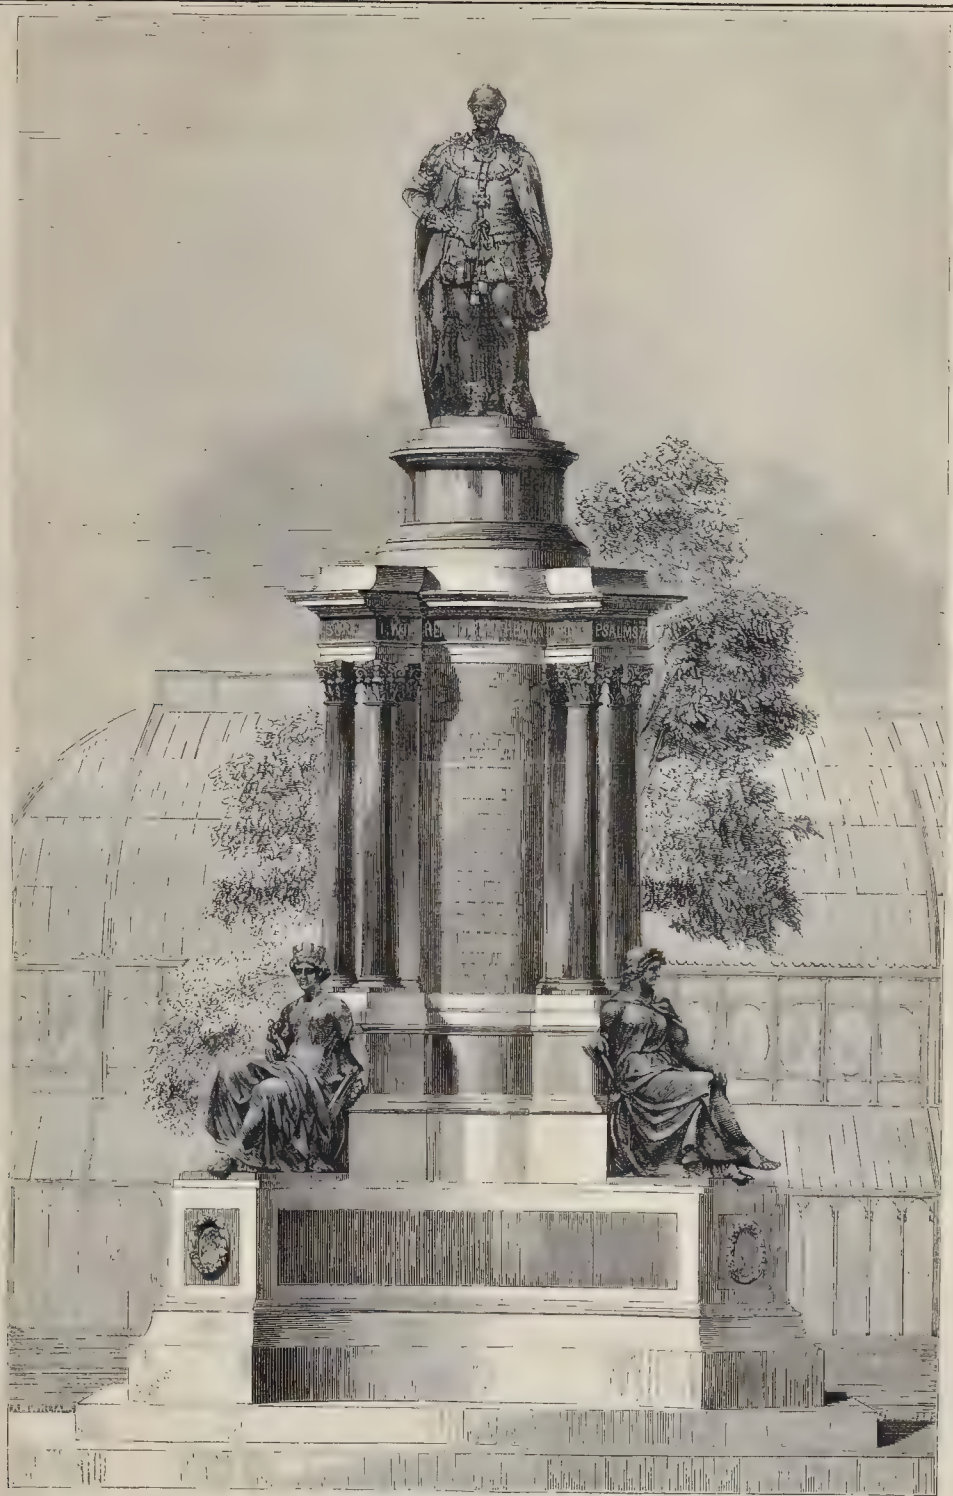
ROYAL HORTICULTURAL SOCIETY'S GARDENS.

HALF-A-DOZEN men have remained faithful to an idea for ten years, and are at last rewarded by its most complete and satisfactory fulfilment. Readers of our earlier volumes may remember of the difficulties which obstructed the proposed erection of a monumental tribute, in connexion with the Great Exhibition of 1851, to the Prince Consort, initiated in 1853 by Mr. Alderman Challis, then Lord Mayor: they will recollect, too, the selection, in competition, of the design by Mr. Durham; how that the illustrious Prince himself, afterwards, when the personal character of the Memorial was removed, gave his invaluable aid to the enlargement and completion of the design; that a site for it was obtained in the Gardens of the Royal Horticultural Society; and how, after the painful event for which the nation is still grieving, her Majesty the Queen and H.R.H. the Prince of Wales concurred in enabling the Memorial Committee to return to the original intention of the subscribers, which was,—to render the Monument a lasting tribute to the Great Founder of the Exhibition. Mr. Durham has now completed his work; and on Wednesday next, the 10th, it will be uncovered in presence of the Prince and Princess of Wales and every other member of the Royal Family, with the exception of the Queen, who will probably visit it previously with the utmost privacy. Foreign ambassadors, grand officers of state, the presidents of societies with which the Prince was connected, the Lord Mayor and sheriffs of London, 100 mayors of provincial towns, and various bodies interested, all in uniform, court dress, or robes of office, will take part in the procession and assist in doing honour to the occasion,—the inauguration of the first public monument raised to the memory of our BLAMELESS PRINCE. Sir Wentworth Dilke and the other officers of the Horticultural Society, in conjunction with the Memorial Committee, are sparing no pains to make such arrangements as may ensure a gratifying spectacle.

Not desiring to forestall our contemporaries by means of any facility we may accidentally possess, we shall confine ourselves at present to very brief particulars. The Memorial stands on a stone basement, erected to receive it by the Horticultural Society, at the head of the lake and facing the conservatory: this we have omitted in the view. The idea embodied is Britannia (typified by the Prince), supported by the four quarters of the globe,—marking that the Exhibition originated in England and was supported by all other nations. The monument is 42 feet in height and 18 feet across the base at the angles. The inscriptions are very full. On the south face are the names, incised and gilt, of all who were mainly interested in the Exhibition; on the east face is a complete list of the exhibiting countries; on the west are the salient statistics of the Exhibition; while the north face is thus inscribed:—

ERECTED
BY PUBLIC SUBSCRIPTION,
ORIGINALLY INTENDED ONLY TO COMMEMORATE
THE INTERNATIONAL EXHIBITION
OF 1851,
NOW
DEDICATED ALSO TO THE MEMORY OF
THE GREAT AUTHOR OF THAT UNDERTAKING,
THE GOOD PRINCE,
TO WHOSE FAR-SEEING AND COMPREHENSIVE PHILANTHROPY
ITS FIRST CONCEPTION WAS DUE;
AND TO WHOSE CLEAR JUDGMENT AND UNTIRING EXERTIONS
IN DIRECTING ITS EXECUTION
THE WORLD IS INDEBTED FOR
ITS UNEQUALLED SUCCESS.

ALBERT FRANCIS AUGUSTUS CHARLES EMANUEL,
THE PRINCE CONSORT.
BORN AUGUST 26TH, 1819. DIED DECEMBER 14TH, 1861.



"He was a man: take him for all in all,
We shall not look upon his like again."

SCULPTOR.—JOSEPH DURHAM.

EXECUTIVE COMMITTEE:

THOMAS CHALLIS, *Alderman, Lord Mayor 1851, Chairman*
FRANCIS BENNOCH
T. B. BRANDRETH GIBBS.
GEORGE GODWIN, *Honorary Secretary.*
PETER GRAHAM.
S. CARTER HALL.

The body of the Memorial is of grey granite from the Cheesewring quarries: the columns and antæ and the panels in the plinth are of red polished granite from Aberdeen. The statue of the Prince, in the robes of the Great Master of the Bath, and the statues of the four quarters of the world, are of bronze, produced by Messrs. Elkington by means of the electrotype process. Of this same material, too, are the caps and bases of the columns, and the medals in the plinth. The Memorial is an important addition to the sculptural monuments of the metropolis, and places Mr. Durham in the front rank of his profession.

MEMORIAL OF THE GREAT EXHIBITION OF 1851, AND OF ITS FOUNDER, THE LATE PRINCE CONSORT: SOUTH KENSINGTON.——MR. JOSEPH DURHAM, SCULPTOR.

ARCHITECTURE OF SOUTH OF FRANCE.*

I MUST now call your attention to some civil and military works in the province; viz., the Palace of the Popes at Avignon, and the walls of Avignon, Villeneuve, and Carcassonne,—all of the thirteenth or fourteenth century. Than the Mediæval fortifications of Avignon, nothing more picturesquely bold can be imagined. They are so boldly machicolated, so grand in outline, and so varied in form, that one feels a sort of irritation against their modern successors, which give us the wretchedly low uninteresting earthworks that now are said to guard our modern towns.

These Avignon walls date from about the middle of the fourteenth century, and put us in mind of the frieze fortifications of Tolentino and such like towns in the Italian marches. And as Pope Clement constructed the Avignon walls, it is likely enough that their design may be owing to an Italian architect; the more so, as the heavy corbelled parapets were little used in France up to this date, the machicolations having been formed in wood until the end of the thirteenth century, with the exception of Auvergne, where stone was used a century earlier. But in another town of Provence, Carcassonne, we have the true French type of fortification of the thirteenth century. The walls throughout are nearly perfect *where not restored*; and, with the bold masses of Avignon in one's mind, have a somewhat feeble look, owing to the absence of the massive crowning corbelled parapet to which we are accustomed. The curtain walls are simple, plain, unbroken masses of masonry; whilst the towers that break their line, though picturesque beyond almost any other example in plan, have no further termination than a slightly-projecting eaves cornice, from which springs a high and conical slated roof. Mons. V. le Duc, as you well know, has exercised great ingenuity and research in planning the restoration of these walls, and has published most elaborate restorations of them in his "Dictionary," and in the national work produced under the auspices of M. Achille Fould. He there states that the upper parts were finished by timbered galleries, and has illustrated this restoration in a very interesting way in both the above works. The portions of the actual work, however, restored by him at Carcassonne, presents nothing of this; and the slight, slated roofs, which now finish the towers, have a most painfully meagre look; though it must, however, be said in justice to him, that the remains both here and at Bordeaux justify his restorations as actually carried into effect at Carcassonne. The other great work in Provence is the palace of the Popes at Avignon — a gigantic pile of the fourteenth century. It was half palace, half prison, with little of the beauty of the one or the massive grandeur of the other; and however interesting many of the details are, more especially of the interior, it owes its interest, I think, chiefly to its historical renown; and few would care to sketch its gigantic barren walls, except as they group picturesquely with the neighbouring cathedral and bridges. Before leaving Provence I must call your attention to one more peculiarity, which it shares, to a considerable extent, with Aquitaine: I mean the enormous, wide-spanned churches of one single aisle only on the plan, though on an enormously enlarged scale, of that of Avignon. Such is the great church of the lower town of Carcassonne, whose clear span must be 60 to 70 feet; the nave of Toulouse Cathedral, the span of which is still wider; and the nave of the cathedral of Bordeaux, 60 feet in span and 200 feet long. These churches have plain groined ceilings, and are, I suppose, about as bold and successful pieces of construction as one could well find; but no one comparing them with the aisled churches would wish to change the latter for these great plain rooms, although they have in the deep side altars a means of procuring bold shadows and decoration, and affording a massive abutment to the thrust of the groined roofs; and if the aisles are to be given up, as some propose with us, in order to give a clean and uninterrupted view, these southern churches offer models deserving of careful study. To make the contrast complete in the cases of Toulouse and Bordeaux, the choir has been added with aisles, to the aisleless nave; and no one seeing the two thus brought directly together could possibly hesitate in deciding between them. The difficult problem of the best form for our Protestant churches would not be solved by copying these southern ones; but no one entering deeply into the subject must overlook them.

I was not able to get a section of these enormously spanned roofs; but they seem to be fine pieces of construction; and I could see no sign of failure, though most of them, including the ribs, are of ordinary bricks.

I shall have to allude, shortly, to the very interesting cloisters of St. Trophime, at Arles, of various dates, from the thirteenth to the fourteenth centuries. But, beyond these, the remains at Avignon and the beautiful choir of Carcassonne, there seems no pointed work of any great interest in the province; whose skill in architecture seems to have suddenly stopped in the fourteenth century. In fact, the interest of Provence is in its Romanesque and thirteenth century work; and it is only at intervals, after their time, that one gets a few straggling examples of later styles; and I shall not detain you with any further allusion to them. Temptingly near to Provence lie Auvergne and Aquitaine, and the southern part of Anjou, with those interesting towns Limoges and Perigueux; but, most of these have been already well described, and I shall content myself by alluding to a few general points of interest.

With respect to the best known work, St. Front, at Perigueux, you had better lose no time in going to see it if you wish to see it at all. Most part of it is now nineteenth century work instead of the tenth; and the student may well give respecting it the same sarcastic reply that the American gave as to the restoration of the Colosseum, "It will be a fine building when it's finished." It was about half-finished, *i.e.*, half-rebuilt, when I saw it no long time since; and if you are very quick, you may, perhaps, arrive in time to see some of the old sculptured work before it is broken up for lime. Mr. G. Scott tells me that he tried, since I was there, and had no little trouble in seeing any even then. However, the great characteristics, the pendentives of the domes, remain or have been reconstructed like the old; and one sees, in a moment, that they are genuine Byzantine, and quite unlike the Avignon type; betraying, in fact, completely, their Venetian or Byzantine origin. The Venetian colony founded at Limoges in the twelfth century, accounts well enough for this; but it was too late to have much, if any influence, upon the architecture of Provence, most of whose characteristic works are of earlier date and seem to owe nothing to the Byzantines but some of their sculptured accessories.

I shall pass over this St. Front style, for it is well known and has been so often described that I should weary you now, perhaps, with the repetition; and I give you, as specimens of the Romanesque work of Aquitaine, the Cathedral (St. Caprais) of Agen, St. Croix and St. André at Bordeaux, St. Etienne (before 1218) and St. Sernin at Toulouse, and the singular church of Moissac—all of the eleventh or twelfth century.

Now, the first thing that strikes one in most of these churches, including that of St. Front, is the free use made of the pointed arches at a time when they were scarcely used at all in England, Germany, Northern France, or Italy. But here we find them quite naturalized and evidently to have been in use some time. In St. Front, of the eleventh century, all the main arches are pointed. At the beautiful church of Agen, nearly all the main arches are also pointed; and, after a very careful examination, I had every reason to suppose that they formed part of the same original work as that wherein the round arches occurred. At St. Sernin, Toulouse, and at Agen, again, we have the barrel roof in one part and the groined roof in another, pretty well contemporaneous, so far as I was able to judge.

At Moissac, the cloisters, dating, it is said, at the early part of the twelfth century, have all the arches pointed. These pointed arches certainly did not come, like St. Front's design, from Byzantium; but the ease and grace which they unite in outline in work of the same period, with the round, may give us a useful lesson in our use of them when we need them.

The next peculiarity is that of the great churches without aisles I have alluded to already. Both at Toulouse and Bordeaux cathedrals they are put in direct comparison with the aisled choirs added in the thirteenth century; and the picturesque effect of these latter place the inferiority of the plainer plan in a very striking point of view. Next to this, we are struck with the wonderful amount of sculptured ornamentation lavished on some of these churches. St. Front, indeed, is plain enough; but Moissac St. Croix at Bordeaux, and St. Sernin and St. Severin at Toulouse, have a wonderful amount of sculpture.

Now, throughout all the Romanesque work of Provence and Aquitaine that I have described, we get no regular eleventh or twelfth century work, such as we are used to in more northern parts. I do not remember, for instance, one single example of a cushion capital. Such ornaments as the chevron, tooth, beak, moulding, &c., which we find not only in Northern Europe but so far south as Sicily—wherever, in fact, the Norman was found—are comparatively rare. Altogether, we may, I think, class it as nearer to the Lombardic work of Northern Italy than to any other; but I believe that the one owes little, if anything, to the other, and that what little of the work of the South of France was not the result of native art, came as much from the Rhine as it did from Byzantium or the East. This Romanesque work in Provence is of no great importance in actual size or amount, but contains, in common with the more important Romanesque work of Germany, a vast amount of material for suggestion. Many of my hearers, and many, too, who can admire the Mediæval remains in general, quite think, no doubt, that our modern usages so utterly differ from those of the eleventh and twelfth centuries, or that their comparatively rude work had been so altered and improved, and so worked out and adapted in later times to later requirements, that this old work is scarcely worth the trouble of dissecting. To me, I confess, the feeling is quite different. I think that there is an amount of real genuine knowledge to be gained by the study of the twelfth and thirteenth century work, which makes it gainful and interesting beyond even that of the more beautifully finished and elaborated work of later times. True, all this is rude and rough, the sculpture wanting in grace, the mouldings in elegance, and the whole work, outline and details, wanting the finish of the Romans before and the Gothic architects after. But we see, in this same rude, rough work, a bold, masculine power of design, which seized on all the appliances within its reach, and used them indifferently, unfettered by the ties of any style to the required purpose of ornament or of use. They used the round arch where they wanted it, and they pointed where they wanted *that*. They took the spire-like form and contrasted it with the dome, as one sees so constantly in the Rhine churches. They used the groined roof, as at Agen and Toulouse, and on the Rhine, or the barrel vault as at Arles, and Avignon, and Toulouse; and all done with so skilful an eye for effect that the result is a fine, bold, strong outline, strong in contrast and yet not harsh.

Now I say that, with no wish to copy, we may learn no unprofitable lesson from this, at a time when fixity of design and fixity of style can scarcely be said to be the characteristic of our art; and I will go farther, and say that from these twelfth and thirteenth centuries we may get some lessons of real practicable value for our every-day practical work.

I never yet saw, in any church that it has been my lot to visit (and I include boldly in this the churches of Sir C. Wren, held up to us as models), any plan worked out so well for our Protestant worship as many of the great Rhine churches of the twelfth century—the Apostles' and St. Mary's at Cologne, for instance. And, take the old sculpture: think of the Roman Maison Carrée, and then on its rude successor in the cloisters of Arles. It is a bold comparison. I do not wish to say one word against the skill and the beautiful carving of the Corinthian capitals of the Roman temple—and no one can admire more than I do the fine effect of the continuous range of these capitals and columns, all alike to a hair's breadth, which build up the graceful outline of the Greek or the Roman temple;—but then, when you have grasped this effect, you have all. Look at the work in detail; and when you have seen one capital or one length of cornice, you will reckon it a sheer defect to find that it differs, no matter how little, from the rest. No art workman could go over the same ground in this way, over and over again, and care much for his work. But to take any other illustration: at Arles, each capital there is a separate study, worked out with care and skill. You have a veritable sermon in stones as you walk round the cloisters and see the Bible history traced gradually round it. A workman may take pride in that; and no workman who did not care for his work could make much of a hand of it. I do not say that we are to copy Arles; but I do say that these Arles workmen were in the right way, and that our art sculpture would be of a higher kind if we went some way in following them.

It seems strange that, when the French architects of the Romanesque times had got so far as to design and execute St. Sernin at Toulouse, and the Germans their great cathedrals of Spires and Worms, all this work should be suddenly stopped

* From a paper by Mr. T. Hayter Lewis, read at the Architectural Exhibition, on the 26th ult.; Mr. B. Ferrey in the chair.

and a new style at once begun; but it certainly was so, and these splendid works fell back into the past and left scarcely a successor.

Of the Gothic works that followed my time will allow me to say but little, though many of them, as the choirs of Carcassonne, Bordeaux, and Toulouse, and many of the other churches of the same date, are of very good and even fine character. I have given some sketches from Toulouse to show some very elegant examples and how very eccentric some of them are: in fact, any drawing does not, from its small size, show well enough how very eccentric this last is.

The South, however, is not the place for studying the Pointed architecture of France; and I shall not, therefore, detain you with it.

I must say a few words upon the modern architecture of France. It is a large subject, for in every town that I have seen the same sort of work is going on as at Paris; for it is quite a mistake to think that the Emperor gives his attention to Paris only: Lyons, Bordeaux, and other great towns come equally under his care; and new streets are there being cut, and new public buildings erected as at Paris. I need not describe the style; for throughout the provinces the same prevails as one sees throughout the new streets of the capital. One can scarcely give it the credit of great boldness or much novelty, its chief features being very delicately cut moulding, with a good deal of graceful ornament, the projections being slight, and almost the only variety given by projecting balconies, often of very good design, and by dormers carried up more or less boldly. In some cases, as the Palais de Commerce at Lyons, the Palais de Justice at Montpellier, the theatre at Avignon, the mass is treated with more originality; but, generally, the chief attention is given to the delicate finish of the details which the clear air and bright sun of France bring out well, but which would scarcely do in our climate, even if it were wished. Be it good or bad, however, the French seem to have worked out and to have adhered to this style, quite irrespective of anything before them; for there are few, very few, of their works that would remind us that they had (to go no farther even than Paris) such works as St. Germain de Pres, or Notre Dame, or the Temple, or that grand old building the Hôtel de Ville.

Now, as to the general arrangement of the Southern towns, it is a question really to be deeply studied by us; for not only is every town of note in our country being rapidly enlarged, and new towns, under the name of suburbs, being added to it; but, for the first time for many a century in our country (and nowhere else, so far as I know, in the whole world) are new towns being founded, *ab initio*, on the waste or the sea-sand, as have been in our time Birkenhead, Fleetwood, and Crewe; as though the old time of the colonists had come again; and it is our part to see that the old town is improved, and the new well designed, so far as lies in our power. Now, take the case of a traveller in an English town, confined to it by ungenial weather or by business; and, when the day's work is over, or the old church seen (if there be one), what more is there to see? The answer was, until quite recently, very simple, —Nothing. But in these French towns one may reckon pretty safely, even in those of very inferior size, to find a good museum of local antiquities and some very tolerable paintings. But the chief thing to be admired, so far as external look is concerned, are their public gardens, always placed so as to command, if possible, a fine view, most carefully planted and attended to, and with almost invariably some statues or fountain really worth seeing, and on which the art of some of their best sculptors has been employed.

I must now ask your attention for a short time to the restorations proceeding with the ancient buildings of the South, as well as of every other part of France; and I shall confine my notices to those to which I have already alluded, and which I have myself seen. It is a matter of great moment; for there is not one building that has not been, or is about to be, rubbed and pulled about and repaired, sculpture and all, until nearly every trace of its antique look has gone. These fine old walls of Avignon are now having their turn, and being rubbed, scraped, and brought to look as bright and new as though they were put up yesterday.

The two transepts of St. Front, Perigueux, have been rebuilt almost entirely; and I looked in vain to find one capital even that had been spared. In the amphitheatre of Nismes the old seats and podium are being rapidly pulled down and rebuilt, not cut out and restored, as we should do it, bit by bit only.

Arles is left for the present; but Carcassonne is sharing the fate of Nismes and Avignon. Those parts commenced upon are being, in fact, utterly rebuilt, so that no vestige of the old can be distinguished so as to settle the point (in many cases very doubtful) as to whether the restoration is a faithful one. Much of the restored work of the Romanesque parts of Carcassonne cathedral, for instance, is open to very grave doubts. In the courtyard of the cathedral I saw three very fine windows of large size put out regularly on the ground. There was scarcely a stone in them that could not have been used again; but I find that they were merely laid there to be more easily copied; and that new, with clear sharp arrises, were to be worked in the places of these time-worn, but still almost perfect old ones.

But the strangest case that I have yet seen is at the very interesting old church, St. Croix, at Bordeaux. I saw there, hanging up in the choir, a drawing of the proposed restoration, and took a rough copy of it. It is proposed there, to rearrange all the windows, doors, and arches of the front, which is a very irregular plan; to finish the tower and the front according to the architect's notion of what it ought to be; and to add on another tower, all quite new, at the west side, so as to match in design with the old work. I saw the foundations dug out for this; and, most certainly, there was no doubt that no tower or work of any sort had ever existed there to warrant this restoration. Now, when we can clearly see from existing remains what the original design was; I, for one, should no more object to its being now carried out, than I should object to the completion of Cologne cathedral. But when an old work like St. Front or St. Croix is rebuilt, the new parts, be they never so closely copied, will be *but* copies; and when they are subjects more of archæological interest than of intrinsic beauty, their value is gone; but to invade an old work like St. Croix, to alter and rearrange and to add to it, in the very face of the knowledge that the new work is a new design and no restoration at all, is to remove altogether one of the landmarks in the history of art; and we see the old church as improved and re-arranged by Abbadie of Angoulême, whose design we do not want, in place of the old which we do—work that had come to us direct from the hand of the old monk who reared it, and had left the mark of his time and of his race cut deeply in every moulding and carved in every leaf.

ELECTION OF DISTRICT SURVEYOR FOR HAMMERSMITH.

At the meeting on the 29th ult., the Metropolitan Board of Works proceeded to elect a surveyor for the district of Hammersmith. The result of the first vote to determine the six for whom subsequent votes should be taken was as follows:—

Sidney Godwin	24	J. Liddiard	9
T. E. Knightley	23	T. Allom	8
W. Lightley	22	J. W. Papworth	8
— Tolley	20	E. Adams	7
A. Peebles	17	J. Houle	5
H. S. Legg	15, 19	T. L. Benham	5
— Marshall	15, 15	— Elkington	5
S. Salter	14	— Nicholls	4
— Saunders	14	E. S. C. Baker	3
C. A. Long	10	F. Todd	1
H. Laxton	10	— Waller	1
E. Paraire	9		

Ultimately Mr. Knightley was elected to the vacant office.

DECORATIVE ART AT PAINTERS' HALL, LONDON.

THE Exhibition of Graining, Marbling, Writing, and Decorative Work, at Painters' Hall, is instituted by the Company of Painter-stainers, it will be remembered, to stimulate the exertions of those engaged in the painting trade; and consists of specimens of graining, marbling, writing, and decorative work. It opens on the 1st of June, and continues until the 30th. The public are admitted gratis.

The prizes consist of four silver medals, four bronze medals, four certificates of merit, and the freedom of the Company, the prizeholder paying only the stamp duty to the Government. There are four classes of work, viz., graining, marbling, writing, and decoration; and three gradations of merit.

The present Exhibition, the third at the Hall, includes the work of twenty-nine competitors. The awards have been made as follows:—

Marbling on wood, Henry Goodwin, bronze medal; marbling and graining on slate, Samuel Burnby, bronze medal; writing on canvas, G. Hewett, bronze medal; marbling on slate and wood columns, Charles Ross, silver medal; graining and marbling (capital woods), Alfred Tyndall, silver medal for graining, and certificate of merit for marbles; writing on glass (overdone with flourishes), W. J. Cloake, silver medal; imitation inlaid woods and ivory, Foster Spotiswood, silver medal; decorations, J. J. Lovegrove, bronze medal; writing and illuminating on glass, Beedoe Edmett, selected for bronze medal, but the writer had been awarded one in 1861.

After a somewhat careful examination, we feel disposed to indorse the awards made by the judges. The marbling, by Mr. C. Ross, and the imitation inlaid woods, by Mr. Foster Spotiswood, deserve particular praise. Amongst those who have not received medal or certificate we may name for commendation Mr. W. Pitman and Mr. J. J. Lovegrove.

The offers of the Company ought to lead to some higher efforts as to decoration than have yet been made.

On former occasions we have given full particulars of the Company and of its Hall.

ECCLESIOLOGICAL SOCIETY.

AT a meeting of the Committee held at Arklow House on May 19th, it was agreed to hold the Anniversary Meeting on Friday, June 19th, at eight p.m., at 9, Conduit-street: the subject of discussion to be The Basilican Arrangement of Churches. It was further agreed that the members of the society should be invited to meet at the Tower at 2·30 p.m., on that day, in order to visit the White Tower and other historical antiquities of the place, by the permission of the Lieutenant.*

The president (Mr. A. J. B. Hope) reported that he had been in communication with the Dean of St. Paul's on the subject of the removal of the grilles, according to the resolution of the committee at its last meeting. He was informed that nothing definite had been decided by the Dean and Chapter. He was requested to urge further that the old grilles—extended (if necessary) to fill the broader arches—should be replaced at the eastern part of the choir to separate it from its aisles. He was further requested to sign, in the name of the society, a petition to Parliament against the Ludgate-hill Railway viaduct.

The coloured cartoons designed by Mr. E. J. Poynter for a window, about to be presented by Mr. Foster White, the Treasurer of St. Bartholomew's Hospital, to the church of St. Bartholomew the Less, were also received from Messrs. Powell: the subject is our Lord's miracles of healing, and the design is very free and vigorous, but scarcely conventional enough (it was thought) for the material.

Various architects submitted designs which were discussed, including the designs for the sumptuous new church of St. Michael, Shoreditch, about to be built by private munificence.

Mr. Clarke called the attention of the committee to the possibility and expediency of preserving the remains of the Augustinian Church in Austin Friars, instead of substituting an entirely new design in the proposed reconstruction.

THE ARCHITECTURAL ASSOCIATION.

THE usual meeting of members was held on the 29th ult., at the House, in Conduit-street; Mr. Blashill in the chair.

The following gentlemen were, on ballot, elected members of the Association:—Mr. Saxon Snell, and Mr. John H. Swan. Mr. R. O. Harris was, on ballot, elected an ordinary member of the committee, in the room of Mr. E. L. Paraire, resigned.

The subject of delegates to attend the approaching meeting of the Architectural Alliance was again brought under notice; and on the motion of Mr. C. J. Adams, hon. secretary, seconded by Mr. Walter Paris, the following resolution was proposed, and after a short discussion agreed to:—

"That our delegates be requested to inquire whether it is the intention of the members of the Alliance to pass under their authority a list of professional charges, or simply to discuss and recommend such list to the individual associations; also whether it is their intention to deal with other important questions on the same principle; and, in the event of their finding that it is intended

* Persons interested in the society's pursuits (including ladies) are also invited to be present. By permission of the Lord de Ros, the White Tower, including the Norman Chapel, and the other historical antiquities of the place, will be open to the inspection of the party. The visitors are requested to mention the President's name to the Warders in charge, and are to meet in front of the Governor's House.

to finally decide on such questions in the meeting of the Alliance, that our delegates be requested to retire, and report to the next meeting of the committee of the Architectural Association."

Mr. Adams next read the report of the sub-committee on the affairs of the Association, containing a number of suggestions and recommendations.

Mr. Paraire expressed himself dissatisfied with the report, and moved that it be referred back to the committee, with a view to reconsideration as to certain points to which he called attention. After discussion, the consideration of the report was adjourned until the 13th inst.

Mr. Arthur Allom then read a paper "On Building Materials and their Adaptation," an abstract of which we will give in our next.

THE ACCIDENT ON THE BRIGHTON AND VICTORIA LINE.

UNDUE haste, to make up for lost time, and so to escape some other catastrophe, appears to have been the real cause of the appalling and fatal accident at Streatham, which so many of the survivors will have cause to remember to the last day of their lives, shortened as these lives may in many cases be in consequence, even where no visible injury resulted. There must certainly be something defective or dangerous in the line of railway near Streatham. The writer of this some time since saw an overturned train at this very spot; and on one occasion, as already recorded in the *Builder*, while he was in a train at the very same place, a signal-man, who had in vain been trying to signal its passage through the tunnel, came running in hot haste to the driver of the engine, sputtering out,—"It's of no use: it won't work: go through like h——." Had the steam or the fire been a little stronger, or had there been a little more weight or pressure on the valve, the result, in that case too, might have been a little more "like h——" than it fortunately happened to be. The incident, however, was significant and suggestive; and it is full time the public were looking (through their legislative representatives) a little more heedfully to their own safety in respect to such matters. In the House of Lords, it was properly remarked, in allusion to a proposal by Lord Brougham that the rapidity of trains ought to be restricted, that it was strict timing at every station (and we might add correct signalling) that was requisite much more than limitation of speed.

NEW PRESBYTERIAN CHURCH AT THROPTON, NORTH NORTHUMBERLAND.

A NEW Presbyterian church is in course of erection on the banks of the Coquet at Thropton, near the famed Simonsides, Northumberland. The scenery in this district is as wild and mountainous as that of North Wales. It is a region of hills. The hill tops rise one behind another and side by side for miles. The slopes are covered with short grass, interspersed with vast patches of heather, ferns, clusters of bilberries, solitary mountain-pinks, lances of foxgloves, and myriads of blocks and fragments of porphyry, deadened in tint by storms to the colour of a rain-cloud, presenting wonderful and inexhaustible beauties in detail, but appearing from a distance uninhabited and inaccessible billows of barren land. But, dotted about, some few miles apart, are small, grey stone houses, thatched with heather and ferns, occupied by shepherds in charge of the large flocks that pasture on the hill sides; and, as sparingly studded, in more sheltered places are the sturdy stone farmhouses of their owners. The shepherds are tall, sinewy, sunburnt men, remarkable for their primitive piety and learning; not a few possessing a knowledge of mathematics. Their regular attendance at places of worship involves walks of many miles to and fro their isolated dwellings. The area from which the congregation of Thropton Presbyterian church gathers together, for instance, is not less than from twelve to sixteen miles in length and breadth. The lithe forms of the stalwart shepherds, wrapped in their long woollen scarfs, lingering in groups near the kirk doors, after services, to say a kindly word to old acquaintance or make inquiry, perhaps, after a daughter in some distant service, are Sabbath pictures, in the quiet, grey, thatched villages among the hills, that it is pleasant to remember.

The new church at Thropton is close to the roadway, in the centre of the village. The site was determined by that of a former building, which it covers with some extension of space. The style adopted is that of the ancient priory church, at Brinkburne, a short distance down the river—Transitional Early English. To suit the requirements of the services, it consists of a nave only; but an ecclesiastical outline has been given by arranging the east end in a five-sided apsidal form, with hipped roof. A porch, on the north side, advances to the boundary line of the village street: over it rises a small tower, surmounted by a spirelet. A small vestry is placed on the south side, near the east end. The west gable end is lighted by a four-light window grouped, with tracery, under a pointed arch. Each plane of the apsidal end is pierced with a cusped lancet; and the rest of the fenestration consists of the same formed lights. They run round the building alternately with buttresses.

On Wednesday, the 27th ult., the foundation-stone of the vestry (the body of the church being already ready for the roof timbers) was laid, with due ceremony, by Mr. James C. Stevenson, South Shields, who placed, in a hollow made for its reception, a glass bottle containing the usual coins, newspapers, &c., and a writing stating that the stone had been laid in the presence of the North-umbrian Presbytery, the Rev. D. S. Feargus, minister, the elders, members of the congregation, the building committee, architect, and contractors. A substantial dinner terminated the proceedings.

When finished, the interior of the church will be fitted with three lines of sittings, leaving two ambulatories, at the west ends of which will be open fire-places—efficient heating apparatus being a matter of more than moment in Border churches. The pulpit and desk, and table of the precentor, will be placed in the centre of the apsidal end, where provision will be made for a stove. The roof will be open timbered, having arched ribs to the principal rafters, opposite every buttress: it will be covered with slates. Messrs. Hunter, Pyle, & Weatherstone, of Thropton and Rothbury, are the contractors. The architect is Mr. F. R. Wilson, Alnwick.

PROGRESS AND PUBLIC WORKS IN WORCESTER.

WORCESTER is still making considerable progress in improvement; and by-and-by its borders, says the local *Herald*, will be so changed as to constitute the ancient city an old picture with a new frame.

The arrangements for the Royal Agricultural Show, although not embracing permanent works, are noticed first by a writer in that paper in a "ramble round the city."

Battenhall-lane is a widely different locality to the narrow, dirty, and sometimes impassable highway till lately existing there. It is now a fine wide drive, with villas erected at various points of its route, which command charming views across the vale of the Severn; and ere long, no doubt, the whole line of road will be dotted with the cottages *ornées* of retired tradesmen, who, just now, have a passion for suburban retreats from business. Passing up the "lane," we arrive at the great show-ground for 1863. The site is about 30 acres in extent. In the centre and west side of the field are the sheds for implements. These will soon be roofed in and covered with sail-cloth. The sheds are upwards of 250 feet long, 20 feet wide, and 7 feet high. On the left-hand are offices for the director, steward, and builder. Further on is the cattle-yard. The contractor for the works on the show-ground was Mr. Manning, the society's regular contractor.

Wyld's-lane has long been distinguished for its narrow approaches from Sidbury. It is intended to lay out and improve it. Wyld's-lane is being widened all the way up; and, in order to do so, Mr. Hayes, contractor, has been engaged, under whose direction some small houses at the Sidbury end of the lane, and on the Red Lion side, have been pulled down. If the houses on the south-east side had been removed instead, Wyld's-lane would have formed a continuous line with the Bath-road. Portions of land and garden-ground at various points on the south-east side of the lane have been purchased, sliced away, and walled up, so as to make the outline of the highway regular, and the road itself wide enough for all purposes. Another road from the bottom of Red-hill, near the Seabright Arms, to join the Wyld's-lane road, is talked of, and has been staked out. Christ Church College have in contemplation to lease their lands in the Wyld's-lane and Perry-wood fields district, for the purpose of erecting villas on the rising ground in front of Perry-wood, and which will be approached by a bridge over the railway.

Railway works are in progress for the combined traffic of the Midland, Worcester and Hereford, and Severn Valley lines. There will be a large increase of sidings and other works, including the erection of a new platform on the east side of the station. The platform will be about 20 feet wide, and will be connected with the main one by a bridge. A large addition has been made to the area of the goods yard east of the passenger station, and another goods shed will be erected near to the present one. Cattle-pens are being constructed at the south-east end of the added area, and stables are being built at the east side. The present carpenters' shops will be cleared away, and new ones of a more permanent character erected on a site considerably to the south of their present position. On the completion of the works now in progress, there will be about six miles of sidings, and space sufficient for increasing them two-fold. Goods trains will no longer run into the passengers' station. A new road into the goods yard from Newtown-road has been constructed, and the extension of the sidings has metamorphosed the country near the station. The new engineering and locomotive offices are approaching completion. Among the alterations is the carrying of the sidings over the old roads leading to Virgin's Tavern and Newtown. Mr. Wilson, the engineer of the company, has had the management of the whole of the works.

PROVINCIAL NEWS.

Norwich.—Some commotion has been caused in this city, according to the local *Chronicle*, by a pamphlet published by Mr. R. N. Bacon, of the *Norwich Mercury*, animadverting upon the alterations of St. Andrew's Hall, and especially censuring the rebuilding of the porch to that edifice. Mr. Bacon, says our authority, calls upon the mayor "to stay so sacrilegious an innovation as this porch," but as its erection has already been commenced and carried forward some way, it is not at all probable that Mr. Bacon's wishes on this point will be met. Some fears have been expressed as to whether the Hall will be completed in time for the Festival. The work of demolition is now completed, and that of restoration has commenced. Over 1,000*l.* have already been subscribed towards the restoration fund by inhabitants of all parts of the city and county.

Luffenham (*Rutland*).—The following were the tenders for erecting a new rectory-house at North Luffenham:—Messrs. Jeffs & Roberts (Stamford), 2,426*l.*; Perkins (Easton) & Bagnall (Stamford), 2,500*l.*; Richardson (Stamford), 2,610*l.*; H. Bradshaw (Stamford), 2,690*l.*; J. W. Timms, 2,700*l.*; Simpson & Malone (Hull), 2,925*l.* The first named was accepted. The architect is Mr. Browning. Little Casterton stone will be used.

Grays, near Purfleet (*Essex*).—On Saturday morning a numerous company proceeded by train from Fenchurch-street to Grays, near Purfleet, to inspect and be present at the inauguration of the South Essex Waterworks. During the inspection Mr. Alfred Smee, the chairman of the South Essex Waterworks Company gave an account of the circumstances under which the undertaking had been founded and of the works which had been established. The water, he observed, was far superior to any now supplied to London. After explaining the properties of the water in detail, and stating that they intended to open the line to Brentwood that day, he called on Alderman Gibbon, who represented the Lord Mayor of London on the occasion, and who started the engine.

Longton (*Staffordshire Potteries*).—The new covered market and the enlarged townhall have been opened. The building, says the *Staffordshire Advertiser*, occupies an area of 5,070 square yards, with a frontage of 927 feet. Nearly the whole of the ground-floor is occupied for the purposes of the market; and the townhall is situate over that portion fronting the market-place. The site is very irregular, and consequently presented many difficulties. The building is in the Italian style; but, in consequence of the great frontage and the limited expenditure, effect has been obtained from the introduction of party-coloured bricks, with stone dressings, and a few Minton tiles; except that the townhall portion of the frontage is executed entirely with Hollington stone. The roof over the market is in three spans of about 55 feet each. The principalsare constructed with wrought-iron rafters and ties, the struts being of cast-iron. The roofs are boarded and slated. Light is obtained from large iron windows in the walls, and also from the roof by means of lantern lights, at an angle of 22½ degrees, running along the centre of each roof, and a ventilating chamber is formed

above the same. The centre roof forms a clerestory 10 feet higher than the side roofs, being 53 feet high to the apex. Ample means of entrance and exit are provided from the surrounding streets, and the loftiness of the market renders it almost free from draughts. A peculiar feature in the market is that along one side of it, fronting one of the principal streets in the town, a row of seventeen shops is provided, having a double frontage, one to the street and one to the market. Over these shops two galleries are provided at small expense, to be used for bazaars, auctions, &c. The total cost of the market, exclusive of that portion under the townhall, will amount to about 10,250*l.* The old townhall occupied about half the frontage of one side of the market-place, and the additions have extended it along the whole frontage, with a portico 32 feet wide in the centre. The interior of the hall has been remodelled. It now affords ample means of entrance and exit, and proper accommodation for public meetings, concerts, balls, &c. The interior is decorated with Corinthian caps and entablatures, and the external stone carving, representing groups of fish, fruit, flowers, &c., on the keystones of the portico, has been executed by Mr. F. Gladwin. The cost of the alterations and additions to the hall has been about 4,250*l.*, making a total cost for the market and townhall of 14,500*l.*, exclusive of architect's commission. The general contractor for all the work has been Mr. Randal Stap, of London.

CHURCH-BUILDING NEWS.

Reach (*Cambridgeshire*).—A clock for the church has been ordered from Mr. Benson, by the incumbent, the Rev. T. Preston, and is to be paid by public subscription. The church has recently been enlarged and beautified. The clock shows the time on a skeleton dial, 2 feet 7 inches in diameter, and strikes the hours on a bell of 1½ cwt. It is already fixed.

Cambridge.—The chief stone for a new church, for All Saints' parish, has been laid, opposite to the College. Mr. G. G. F. Bodley, of London, is the architect. The style will be that of the fourteenth century. The plan will consist of a nave and south aisle, there being five arches between them, with octagon columns and moulded capitals; a chancel, which will form the lowest stage of a central tower; with a vestry at the south-east angle. The chief entrance to the church will be through a porch, at the north-west corner from Jesus-lane. The arrangements of the interior, when completed, will comprise open seats in the nave and aisles, and stalls in the chancel. The arches which support the tower will be of lofty proportions. The nave and aisle will be lighted by windows of two and three lights having geometrical tracing in the heads. The tower, which will span the nave, will eventually be surmounted by a belfry stage, having two traceried windows on each side of the tower, and be finished by a lofty octagonal spire. The east end, which will be seen from the Barnwell-road, will have an east window of early tracery. The walls externally will be built throughout with Casterton and Ancaster stone, and the roofs covered with tiles. The works are in active operation, and will be so far carried out this year as to build the church and base of the tower with the 4,000*l.* now in hand. The tower and spire will be completed gradually, and new bells, font, organ, seats, and other necessary furniture obtained as further subscriptions come in. The spire is to be 180 feet high—estimated cost, about 1,000*l.*

Bringhurst (*Market Harborough*).—The church at Bringhurst has been for some years in a very bad state. The interior has been renovated. These walls have been cleared of plaster and whitewash. A new window has been cut just above the west or belfry door, and the small tower arch re-opened, which some years ago was blocked up to make the church warm. The two aisle arches are Norman, and were washed over. These have been cleared, and the caps thoroughly restored as far as practicable, some being much broken. The walls have been replastered, but are not to be whitewashed. There is a new stone floor, the ground being raised full nine inches above the old one. There are new open seats of deal, stained and varnished. A new chancel arch has been put in, for as they were repairing the old one it fell. An open timbered roof has been put up in the chancel. These and other improvements will cost about 500*l.* The chancel has been restored by the Ecclesiastical Commissioners, who are the patrons of the living. The cost has been about 200*l.* Mr. Christian was the architect. The works have been performed by Mr. J. Stanyon, mason, Harborough; and Mr. J. Loveday, carpenter, Kibworth.

Hertford.—The new Independent Chapel at Hertford, the first stone of which was laid in August last year, has been opened for public worship. The new building stands partly on the site of the old chapel at Cowbridge. The style is Transition. The dressings of the doors and windows are of Bath stone. The walls are faced with cut flints having white brick bands and quoins. The eaves-course is formed of white moulded bricks projecting from the walls. The capitals, bosses, and various parts of the stone work have been left in block. The chapel consists of a nave, with side aisles and transepts, which appear in elevation, but do not project beyond the aisles. At the west end of the chapel there is an organ gallery within a large arch; and at the east end there is a gallery for children. The roof, which is open-timbered, is supported on cast-iron columns, of chocolate colour, with foliated caps, into which mauve tints are introduced. From the columns spring large curved ribs which span the whole width of the nave, and form the principal brace of the roof. The clerestory is formed of wood, and is a continued series of trefoil-headed lights extending the whole length of the chapel. In the transept windows coloured glass is sparingly introduced in the centre, in the form of the hexalpha, which of late has been treated of in our columns. The seats are all open with low and slightly inclined backs. The old pewing of the chapel has been used. The chapel is lighted by two star-burners. The pews in the nave and aisles are estimated to accommodate 370 persons. The architects were Messrs. T. Smith & Son, of Hertford. The design has been carried out by Mr. H. Norris, of Hertford.

Cricklade (*Wilts*).—The parish church of Cricklade St. Sampson, North Wilts, is at present in a bad state. The Earl of Radnor is about to repair a part of one of the aisles, and the lessee of the rectorial tithes the chancel, and the parishioners, desire to put the other parts of the building into thorough repair, and to replace the pews by better arranged sittings, which will give increased accommodation. An estimate of the cost of these works has been made by Mr. Christian, of London, architect; and upwards of 2,000*l.* will be required to effect them. About half the sum required has been obtained, and the balance is to be raised by rate extending over a period of ten years.

Biddulph (*Staffordshire*).—The new church, just erected on Biddulph Moor, has been consecrated. The edifice is named Christ Church, and stands on an elevated plot of ground on the higher part of the moor. It is built of stone, in the Norman style, but plain in design. It consists of a nave and chancel, with vestry, and a recess on the south side for Sunday scholars. It will accommodate upwards of 300, more than 200 free. The building (exclusive of the burial-ground) has been erected at a cost of about 1,400*l.*; the contractor being Mr. Jos. Stanner, Biddulph; and the architects, Messrs. Ward & Son, Hanley.

Handsworth (*Staffordshire*).—The foundation-stone of a new church intended to supply the wants of the rapidly increasing population at Birchfield, in the parish of Handsworth, has been laid by the Earl of Dartmouth. The church is being erected from the designs of Mr. J. A. Chatwin, and comprises a clerestoried nave, apsidal chancel, side aisles, and transepts. The church will accommodate 612 adults. The extreme length will be 117 feet. The nave will be 84 feet long, and the chancel 33 feet; and the width of the nave and aisles together will be 48 feet 6 inches. The chancel will be 21 feet 6 inches wide. The interior of the building will be faced with Bromsgrove stone, with Bath stone dressings to the chancel arch and windows. The roof will be open-timbered. Hamstead stone will form the facing of the exterior, and the dressings to the doors, windows, &c., will be of Bath stone. The site is at the junction of the Heathfield and Birchfield roads, and was the gift of the late Mr. William Haughton. The edifice will cost 3,800*l.* Mr. Samuel Briggs, of Walsall, is the builder.

Chaddesley (*Worcestershire*).—The Church of Chaddesley is to be restored. Mr. Butterfield, of London, architect, was employed, and his plans included the scraping of the nave, opening its roof, removing the galleries, carrying the wall of the north aisle further out so as to give room for a double instead of a single row of seats in that aisle, and thereby compensating for the removal of the galleries; reseating the church, and filling the north chapel with seats and the organ; renewing all defective masonry; opening the western arch; stopping the western door under the tower with a window, and making an entrance in the south side of the tower wall instead. Also to rebuild the eastern portion of the south aisle, and remove from the south wall an archway, now blocked up, to do duty at the entrance-door under the tower. With regard to the chancel, the restoration of that portion of the edifice belongs to the lay impropriators. The tender of Mr. Lovett, of Wolverhampton, has been accepted for the works in the nave, &c., at 1,540*l.*, including 90*l.* for the south aisle, which, it is hoped, will be postponed for the present. Towards this sum 1,500*l.* have been promised; but this does not include architect's charges or extras.

Bristol.—The restoration and enlargement of the ancient church of St. James have been commenced. Mr. Scott, according the local *Times*, lately inspected the building; and the local architects, Messrs. Popes & Bindon, will give attention to the undertaking until its completion. The erection of a north aisle, and the enlargement of the chancel, will afford increased accommodation. ——At a meeting of the parishioners of St. Stephen, Mr. Fripp, architect, explained the present condition of the church, and the works contemplated to be carried out. From his statement it appeared that the walls are considerably out of the perpendicular, and that the roof is in an unsound state. It was estimated that some 560*l.* would be required to execute the repairs, while there was an estimate of 1,500*l.* for some further works, and it was said that for 5,000*l.* the church could be so renovated and restored as to render it safe for the next 400 or 500 years. The meeting, however, seemed to be of opinion that only the necessary repairs should be now undertaken; and the only question at issue was the manner in which the funds were to be raised. After some discussion, it was deemed advisable to give the matter further consideration, and the meeting was adjourned.

METHODIST CHAPELS.

Nottingham.—The first stone of the new Independent Methodist chapel to be erected in Great Freeman-street has been laid. The contractors are Messrs. Lamb & Stevenson, their tender being the lowest of the eleven sent in. The building will be of Early Gothic design The entrance is so constructed that a speedy exit from all parts of the interior, in case of fire or other emergencies, may be gained. Where the nave and transepts intersect a turret rises and crowns the whole. School-rooms and out-offices can also be erected according to the present plans. Near the eastern end of the chapel a platform will be raised, and from this the service will be conducted. Behind this platform will be the orchestra in which the choir will be placed The following is a list of the tenders:—Ward Ansell, & Co., 1,230*l.*; Claricoat, 1,220*l.*; Brassington, 1,219*l.*; Dawson, 1,219*l.*; Bradbury, 1,119*l.* Wright, 1,160*l.* 10*s.*; Bell & Wood, 1,136*l.* Slim, 1,128*l.*; Wood & Gilbert, East Bridgford 1,118*l.*; Lamb & Stevenson (accepted), 1,114*l.* 10*s*

Acock's Green (*Birmingham*).—The foundation stone of a Wesleyan chapel has been laid here. The building will be Gothic. The front and return ends will be faced with front bricks, varied with stone and coloured brick dressings. The inside will be fitted up with open stalls. The roof will be open, the ceiling being carried part way up the rafters, the better to allow for ventilation. The internal dimensions will be 45 feet long by 21 feet wide, and 18 feet from floor to ceiling. The chapel will accommodate about 200 persons, and will cost to erect about 400*l.* Mr. F. D. Johnson of Birmingham, is the architect; and Mr. W. Bennett, of Birmingham, the builder.

Bootle (*Cumberland*).—The foundation-stone of a new Wesleyan chapel has been laid in Balio road, Bootle. The edifice will accommodate some 800 persons. Mr. C. O. Ellison, of Liverpool is the architect; Mr. E. Hughes, of same town, the builder. The contract is for 3,300*l.*; but it is anticipated that the cost of the building will amount to 4,000*l.*, besides the heating apparatus, gas-fittings, and boundary wall.

Manchester.—The first stone of a new Wesleyan chapel has been laid at Openshaw. At the rear of the chapel a school will be erected. The chapel is to be built in the Anglo-Italian style, and will seat 610 persons. The works are being carried out by Messrs. Warburton, Brothers, builders, Harpurhey, under the superintendence of Messrs. Hayley & Son, of Manchester, architects. The cost, exclusive of lighting and warming, but inclusive of boundary wall, &c., will be about 2,600*l.* The architects, remarks the local *Courier*, have originally designed a smaller chapel only (in the

Gothic style), to occupy the site of the diminutive and insufficient Wesleyan chapel in Ashton-road; and the works were just about to be commenced when, by a donation of 1,000*l.* from Mr. John Ashbury, the committee were unexpectedly enabled to abandon their limited scheme, and to venture on the erection of the chapel, school, and outbuildings now described.——The foundation-stone of a new Primitive Methodist chapel has been laid in Hyde-road. The edifice will be a plain structure, having a red and white brick front, with dressings of stone. It will be 43 feet long by 31 feet wide; and the basement will be devoted to the schools. There will be forty-six pews, for about 300 persons, and further accommodation may hereafter be given by the erection of galleries. The cost is estimated at 800*l.* Mr. J. E. Smith is the architect, and Mr. C. Genney and Messrs. Hoyland, of Bradford, near Manchester, are the contractors.

Southport.—The foundation-stone of a new Wesleyan chapel, to be erected in Duke-street, Southport, has been laid by Mr. Fernley, at whose sole expense the building is to be raised. The chapel is to be a stone building, in the Early English style, to contain about 800 sittings. The interior measurement will be 111 feet by 57 feet, exclusive of transepts. There will be a nave, side aisles, apse, tower, clerestory, and two vestries, but no gallery. The architects are Messrs. Starkey & Cuffley, Manchester. Contractors:—Mr. Riding, bricklayer; Messrs. Ellis & Hinchcliffe, masons; Bowden & Edwards for the remainder of the work. Clerk of the works, Mr. G. Ogg.

Boroughbridge.—The chief stone of a new Wesleyan chapel and schools has been laid here. The chapel will be in the Early English style. The plan is a parallelogram, the internal length being 55 feet and the breadth 38 feet. There will be galleries on two sides and one end, supported by quatrefoil iron columns, with moulded capitals. The roo is to be open-timbered, with Gothic arches springing from column to column; and the rafters will be overlaid with boards, and the whole of the woodwork stained and varnished. The chapel will seat 400 persons. The estimated cost of the whole, including land, drainage, fencing, warming and lighting, &c., is 1,300*l.* The works are progressing by the several contractors, viz., Mr. Leaf, woodwork; Mr. Taylor, brickwork; Mr. Thornton, stone work; Mr. Daggett, plumbers' work, &c. The plans, &c., have been gratuitously supplied by Mr. Thornton, of Boroughbridge.

MONUMENTAL.

THE present Mayor of Hull (Mr. Moss) has had an interview with Mr. Earle on the subject of the statue of her Majesty ordered by the late mayor, Mr. Z. Pearson, who became bankrupt; and arrangements have been made, we understand, whereby the statue will be taken to Hull, and formally inaugurated in the People's Park, for which it was originally intended, in a few months' time. It is the unanimous wish on the part of the inhabitants that the Prince and Princess of Wales should visit Hull on the occasion, and that the former should officiate in the inaugural ceremony.

During the sitting of Parliament last year a monument was erecting at Hughenden Manor, Buckinghamshire, the seat of the Right Hon. Benjamin Disraeli. Its object was unknown till the session was over, and Mr. Disraeli for the first time saw this tribute erected without his knowledge—to the memory of his father, the late Isaac Disraeli. The inscription is as follows:—"In memory of Isaac D'sraeli, of Bradenham, in this county, Esq., and Hon. D.C.L. of the University of Oxford; who, by his happy genius, diffused among the multitude that elevating taste for literature which, before his time, was the privilege only of the learned. This monument was raised in affectionate remembrance by Mary Anne, the wife of his eldest son, the Right Hon. Benjamin Disraeli, lord of the manor, Chancellor of the Exchequer, 1852, 1858, 1859; and now, for the sixth time, knight of the shire." The monument is placed prominently on the summit of a high hill, flanked by woods, opposite to the elevation upon which the manor-house stands, and can be seen from many places at a considerable distance. The monument is in the Renaissance style: it is built of Bath stone, upon a rustic base. In the centre of the shaft there is a medallion of the elder Disraeli. The monument is 50 feet high, and is the design of Mr. E. B. Lamb, of London, architect.

The long-talked-of project of a monument to the memory of Tyndale, the translator of the Scriptures, has at length taken a practical turn by the laying of the foundation-stone on Nibley Knoll, a spot in the parish where Tyndale was born. The site is a lofty eminence, from which the whole county of Gloucester is presented in one panorama. The monument will be in the form of a cenotaph, of Hampton-Common stone, erected from a design supplied by Mr. Teulon, of London. The cenotaph will consist of a tower, 26 feet square at the base, rising to 22 feet, and by gradations to 16 feet 6 inches, and diminishing 2 feet above that. The entire height will be 111 feet, exclusive of the terminal, which is proposed to be a reflector. The entrance will be on the east side, and there will be a staircase inside to ascend. The cardinals will be filled with sculpture. The top of the erection will be terminated with a machicolated cornice. Within the doorway a place will be provided on which to chain a Bible, and there will be a book-rest on the outside, on which the public may read the work.

THE STAGE.

Royal Italian Opera.—Mario and Madlle. Patti have been admirable in "Il Trovatore," the latter more so, considering her youth and *physique* than even her warmest admirers could have anticipated. The strange proceedings with which her name has been recently mixed, would seem to bespeak for her additional sympathy. The revival of the "Prophète," a few evenings ago, with its gorgeous colourings, both musical and scenic, raised the house to enthusiasm; Tamberlik and Madame Didiée supporting the two main parts. *La Gazza Ladra* is announced for Saturday, with a strong cast, including Madlle. Patti.

Her Majesty's Theatre.—The daily papers have spoken with praise of the new ballet here, *Bianchi e Negri*. Less comprehensible rubbish was surely never set before a public. Mdlle. Amalie Ferraris is an admirable dancer nevertheless.

Princess's Theatre.—"Court and Camp," the drama (from the French) with which Mr. George Vining has inaugurated his management of the theatre, is full of bustle and incident, and affords a capital part for himself, which he plays with great spirit and vivacity. He is aided—so far as the plot will allow—by Mr. Belmore, Miss Amy Sedgwick, and Miss Lydia Thompson; but the villain of the piece, the *Conte Salviata*, comes out flatly from the hands of Mr. Charles Verner. Versailles at night with a fountain; the destruction of Lawfeld Mill; and the Watteau *Fête*, with which the piece concludes, are the three great scenes, and do infinite credit to Mr. F. Lloyds, who shows in them inventive power as well as artistic skill. Mr. Vining must not forget that he has in Mr. Belmore a real actor, and should give him something to do whereiu he may show that he is so.

The Olympic.—Mr. Neville has never done anything so good as *Robert Brierly*, in Mr. Tom Taylor's drama of every-day life, called "The Ticket of Leave Man." Mr. Neville has a good future before him if he continue as he has begun. Mr. Telbin has produced two capital scenes for the play, a suburban tea garden, with which it opens, and a city churchyard, with which it closes. Both are excellent. The piece is very interesting.

COMPETITION.

Girls' Industrial Schools, Coventry.—In answer to a correspondent in last week's *Builder*, I beg to inform him and others interested in this competition, that the successful competitors were Mr. Pratt and Mr. Nevill, both residing in Coventry. As the designs were all submitted under motto, it may appear a strange coincidence to those who are not familiar with competitions, that out of twenty designs sent in, the two to which premiums were awarded were the designs of residents in Coventry; but to those who are familiar with competitions, I am sorry to say it is not at all singular. R.

FIGURE DRAWING FOR ARCHITECTS.

WILL you allow me to call your attention to the following? Such articles are sure to do good; and perhaps some day the Institute may think fit to have a life class in its rooms, open to all members; for depend upon it there will be no advancement in our profession until the architect can draw the figure.

In the meanwhile, in order to expedite the good time, I most respectfully leave it to your consideration to reprint the article of the *Standard*. It is in the main but only too true, although a notable exception should have been made with regard to the figures in Mr. Hardwick's design, which, to my certain knowledge, were drawn by an architect.

The School of Art at South Kensington on its side might do a great deal more good if it were to teach the figure at once instead of disgusting the beginner with their objectionable book, "Dyce's Outlines." W. BURGES.

*** The article in question, in noticing the drawings by students in the schools now exhibited at South Kensington, thus proceeds:—

"We cannot help avowing here that it seems to us that the Academy should insist that their students should all pass a satisfactory examination in perspective and geometry; and that the architects in their turn should declare that no one, unless he were able to demonstrate that he could draw the human figure, should be recognized as an architect. How necessary this is was proved by the late exhibition of drawings for the Prince Consort's memorial. In all these designs, where the architect pretended to show how sculpture should be employed, the drawing of the human figure was beneath contempt, not excepting even Mr. Scott's chosen design. We do not flinch from our duty in making these remarks; for we think, from what is before us in this present exhibition of pupils' studies at South Kensington, that the course here established promises a higher artistic education than can at present be obtained anywhere else in Europe. The best proof of the correctness of our assertion is to be found in the reports of the foreign jurors of the International Exhibition. These gentlemen, headed by M. Michel Chevalier, testify their absolute amazement at the progress of England in the domain of taste. 'The upward movement,' writes M. Chevalier, 'is visible, above all, among the English.' 'The whole world has been struck with the progress which they have made since the last Exhibition in designs for stuffs and in the distributions of colours, as also in carving and sculpture, and generally in articles of furniture.' M. P. Merimée distinctly pronounces—'It is particularly in what concerns the application of art to industry that England manifests the happiest and most notable improvement. A new school has been founded on a plan admirably devised for the industry, and neither care nor money has been spared to render it worthy of its mission.' The director of the Royal Industrial Italian Museum at Turin, Signor G. Devincenzi, declares his opinion that there is not 'any other institution that has been of more advantage both to the progress of industry and of the industrial education of the country.' By his advice the Italian Government have established a museum on the same principles at Turin; and the director is sanguine that 'nothing will be more useful to promote the progress of Italian industry and of the national education.'"

SHAKSPEARE'S MORTAL REMAINS.

WILL you allow me to endorse your opinion that the remains of the great Bard of Avon should not be disturbed. Pleasant leafy Stratford-upon-Avon, at any season, and more especially when seen after a summer shower, when the scarlet passion-flowers, climbing up the fronts of some of the quaint houses, are full of rain, and the gravel-paths are newly washed with the drippings from young linden trees; and the river, as it skirts the churchyard, is chequered with cloud shadows, appears as fit a resting-place for the great master of song as it was a birthplace; and the latter no man chooses. The removal of the body of Mary, Queen of Scots, by her son James I., from Peterborough Cathedral to Westminster Abbey, twenty-five years after burial, took place four years before the death of Shakspeare. This ceremony, with a recognition of the possibility of a similar post-humous honour in stone for himself, may have given rise to the sentiment attributed to the sexton and stone-cutters. F. R. WILSON.

LIMITS TO RESPONSIBILITY OF MASTERS FOR INJURIES TO WORKMEN.

IN the Bail Court on May 26th and 27th, the cases Sullivan (administratrix) *v.* Booth, and Leahy *v.* Booth, were decided in sittings at *Nisi Prius* before Mr. Justice Mellor and a Common Jury.

It appeared that the defendant had bought several lots of buildings in Hungerford-market, which were to be taken down, and the materials were to be removed. The deceased Sullivan and the plaintiff Leahy were two of the workmen, or labourers, employed upon the work of demolition. On the 21st of June the defendant came upon the premises and superintended the work that was going on at Lot 1. There was a stone flooring above the shop: some of the stones weighed as much as two tons. The defendant ordered the men to remove this stone flooring; but, as they did not work sufficiently fast for him, he ordered the deceased and Leahy to assist. The men proceeded to use levers to remove one of the stones, which tilted up and fell down, taking the deceased with it, through a floor into the cellar, a distance of 35 feet, and the deceased was crushed to death and Leahy injured. It was alleged that this arose in consequence of the stones or flooring not having been properly supported by props at the time.

Evidence was led, *pro et con.*; and, after counsel for all parties had urged the interests of their respective clients,

Mr. Justice Mellor proceeded to sum up the case; and, as regarded the law upon the subject, which is one of great importance to masters and servants, said:—If a master is to be made responsible under all circumstances, it would be a very dangerous thing to be a master. No doubt under many circumstances the master is responsible for damage done by his servants, because he has the power of selecting them; but it has been established, by a multitude of cases, that a servant cannot maintain an action against a master for an injury resulting from the carelessness or negligence of a fellow-servant; and

you will see the principle upon which this goes. The principle is this,—that a servant when he engages to serve a master undertakes to run all the ordinary risks of the service, which include the negligence of other servants: the master does not warrant to the man he engages that he will be responsible for the negligence of all his servants. But if a master negligently select or choose an incompetent servant, and give him the general superintendence of the particular work, and the power of giving directions how it is to be carried out, the master is responsible. If the master intrust the direction to a foreman or a manager,—for it is impossible for a master to be personally attentive to or cognizant of all that takes place,—therefore, if he give the superintendence of the work to a foreman, and give him power to give directions, and do nothing more than generally look and see how the work is going on, that is not such an interference as will make a master liable: the mere encouragement to go on with the work is not such an interference as will make the master liable. The interference that will make the master liable is that which supersedes the authority given to the servant. If they thought there was no negligence by Hollingsworth [the foreman], then there would be an end of the case. If they thought Hollingsworth did not use reasonable precautions; yet if they thought the master reasonably warranted in employing Hollingsworth, the master would not be liable. If the master employed a skilful workman, it was not necessary for him to give specific directions.

The jury returned a verdict for the defendant in both cases; but they thought the defendant might have used more caution.

LIABILITY OF SURVEYORS.

THE case of Young *v.* Davis has at length been definitely settled by the Exchequer Chamber. At the Oxford Assizes, in July, 1861, an action was tried before Mr. Justice Keating, between Joseph Young, of Oxford (plaintiff), and William Davis and Richard Davis, surveyors of the parish of Alkerton, near Banbury (defendants). The case was this. In November, 1860, Joseph Young was proceeding down Alkerton-hill, when he fell and broke his leg,—as he alleged, through the negligence of the surveyors in not filling up a hole at the bottom of the footpath, into which he fell. The defendants insisted that as the hole was there when they took the office of surveyors, and for many years prior to that time, they were not liable for the accident. After a lengthened trial before a special jury, a verdict was returned for plaintiff, for 150*l.* damages and costs. The defendants succeed in setting aside the verdict, and the plaintiff appealed to the Court of Exchequer Chamber, and on the 15th ult. the case came on for argument before the Lord Chief Justice Cockburn and other Justices, when the Court decided that the verdict in favour of the defendants was a correct one, and confirmed it accordingly. They held that the 5 & 6 William IV., cap. 50, did not throw upon surveyors a new liability; and that the action was not maintainable.

CASE UNDER BUILDING ACT.

MR. JOHN WARNER was summoned, on the 2nd inst., to the Wandsworth Police-court by the District Surveyor, under the Building Act, for that, after digging out for the foundations to five houses in Battersea Fields, he had filled in dry brick rubbish to receive concrete, instead of laying it on solid ground. The magistrate held that no objection could be made thereto, inasmuch as no building had been commenced, and dismissed the summons.

Books Received.

Catalogue of Macfarlane's Cast-iron Manufactures. Fourth edition. Vol. I. Architectural Appliances. Bedford-street, Strand.

THIS volume might be more correctly styled a book of engravings than a mere catalogue; and it must have cost more than a trifle in the getting up.

The branches of trade to which Messrs. Macfarlane & Co. (of Glasgow and London) have directed their attention are somewhat peculiar, and have been almost entirely developed by themselves; evincing an amount of originality and striking individuality rarely to be met with in a manufacturing firm. The amount of detail given in this catalogue enables the most inexperienced person thoroughly to understand what is described. The price list also, at the end of the catalogue, has peculiar features, simplicity of reference and completeness being their aim. The want of this desideratum we have long complained of in reference to most manufacturers' books.

The erection of Messrs. Macfarlane & Co.'s works at Glasgow (the Saracen Foundry, formerly in Saracen-lane, now in Washington-street) is a matter we would also especially notice. A general view of the building is given as the frontispiece to the volume under notice, and enables us to form an opinion as to its merits. In the erection, while keeping strictly in view the requirements of their business, the fresh purpose-like novelty of many of the features shows what may be accomplished in even the most smoky description of public works. On a first glance at the structure the campanile-like stalk in the foundry yard first attracts attention; and forms, indeed, one of the most conspicuous and striking portions of the general design. It rises, we understand, to a height of about 135 feet, and is about 12 feet 6 inches square at the base, the lower portion forming a pedestal, from which start pilasters of white brick, three on each facing, having red brick panels between. The pilasters, which lend an appearance of graceful lightness to the shaft, are carried up nearly to the top of the stalk, and are there connected by arches, springing from enriched capitals, above which again a cornice is placed, constructed of white and red brick boldly moulded and appropriately enriched to suit the nature of the material. An ornamental cast-iron cresting with angle finials and gilt bannerets surrounds the whole; looking like a crown, on what, though but a chimney, is yet in its way a work of art.

The general design of the building is after the Venetian type. The front to Washington-street is mainly occupied by the warehouses, which have a frontage of 104 feet in length, and are flanked north and south by stone screen walls surmounted by ornamental iron crestings. The walls are built in narrow courses of blue stone with dressings of white Kenmuir stone, a massive-looking sloped basement extending along Washington-street, being of a dark toned freestone. The main cornice is formed by a large cast-iron moulded gutter, supported by foliated iron brackets, alternating with gargoyles in the gutters, this again surmounting a deep splayed stone frieze course. An ornamental eave cresting is secured to the roof immediately above the cornice. The roof is pavilioned in three sections, the central span being the greatest, the ridges on all sides supporting ornamental crest rails with corner terminals and bannerets. As "art-workers" in iron, Messrs. Macfarlane seem to have lavished the resources of their skill and long experience in making their foundry an evidence of what they can do. The ornamentation of the building is all iron. The architects were Messrs. Boucher & Cousland.

Miscellanies, Historical and Biographical; being a Second Series of Essays, Lectures, and Reviews. By WILLIAM S. GIBSON, M.A., Barrister-at-Law. London: Longman & Co.

OUR readers and the general public are well acquainted with Mr. Gibson as a popular writer. The present volume is mainly a reprint from *Bentley's Miscellany*, *Household Words*, *The Ecclesiologist*, and the *Morning Post*. It comprises essays, topographical, scientific, biographical, historical, and miscellaneous. Among the topographical essays are those on Alnwick and Auckland Castles, Finchale Priory, Byron at Newstead Abbey, Summer Days in Scotland, and others. The scientific essays include those on Art Treasures at South Kensington, Impressions of the International Exhibition, the British Association at Oxford, and others; and there are various biographical and historical essays, well written and entertaining.

The World's Debt to Art. By A. J. B. BERESFORD HOPE. London: Ridgway. 1863.
The Condition and Prospects of Architectural Art. By A. J. B. BERESFORD HOPE. London: John Murray. 1863.

WE are glad to see that Mr. Beresford Hope's valuable lecture, "The World's Debt to Art," delivered in the Town Hall at Hanley in February last, and reported in our pages at the time, is published in pamphlet form; as well as the same gentleman's address on "The Condition and Prospects of Architectural Art," delivered by him at the Architectural Museum, in March. We reported this last address at very considerable length when it was delivered; but many will be glad to find it as perfected by the author, and in a handy form. In his spoken address Mr. Hope disappointed some warm friends of the Museum, by the limited view he took of its scope. These limits, we are glad to see, are made not so obvious in the printed lecture. The Architectural Museum that we look for must be a great deal more than a collection of specimens of the architectural art of the thirteenth, fourteenth, and fifteenth centuries, valuable and important as these are.

VARIORUM.

THE American "Annual of Scientific Discovery; or, Year-book of Facts in Science and Art for 1863," edited by D. A. Wells, A.M. (London: Trübner & Co.), has been published. It sustains its reputation as an interesting and valuable record of progress;—not forgetting, of course, what has been done with war appliances.——"Half-hours with the Microscope. By Edwin Lankester, M.D. Illustrated from nature by Tuffen West. A new edition. London: Hardwicke." Our former commendation of this very interesting volume has been fully justified by the fact that seven thousand copies have already been sold, and that it is now in its third edition. Dr. Lankester has made several important additions, consisting of fresh matter, interspersed with wood-cuts, descriptive of the compound microscope and its various appendages.

Miscellanea.

ALBERT MEMORIAL FOUNTAIN AT QUEENSBURY.—The people of Queensbury, a town of about 10,000 inhabitants, situate in the hilly district about midway between Halifax and Bradford, have just celebrated the inauguration of an Albert memorial fountain. The event was made the occasion of a general holiday.

"THE CANOE, THE RIFLE, AND THE AXE."—The descriptive and pictorial entertainment, which Mr. J. K. Lord is giving under this title, at the Egyptian Hall, conveys a good deal of entertainment; but it wants light and life, and these must be given to it if it is to become popular. Pauses while the pictures are being changed are depressing, and should be avoided. "Go along! Keep moving," is a useful maxim for those who would "entertain."

A CATHEDRAL PLUNDERED OF ONE OF ITS BELLS!—Our contemporary the *Worcestershire Chronicle* publishes the startling announcement that one of the great bells of Worcester Cathedral, weighing five hundredweight, has recently been stolen, it is not known how or when! but it must have been within the last few months. The missing bell is probably broken up and no longer in existence by this time, and will never more be seen, whatever be the fate of the audacious thief.

ANTIQUITIES OF SOUTHAMPTON.—A correspondent of the *Hampshire Independent* points out some alterations now proceeding at the Bar Gate, and at the ancient Maison Dieu, or God's House. It is to be hoped the corporation will take care they are not destroyed or defaced; also the remains of the old town wall, which is still perfect, till it reaches the Eastgate, formerly in East-street. The Maison Dieu, in Winkle-street, is being re-faced with stone. The walls are of great thickness—nearly 3 feet. The Wardens and Fellows of Queen's College will no doubt take care that the monument erected by Lord Delaware, which bears the following inscription, is preserved:—

> Richard, Earl of Cambridge,
> Lord Scrope, of Masham,
> Sir Tho. Grey of Northumberland,
> conspired
> To murder King Henry V. in this town,
> As he was preparing to sail with his army,
> Against Charles VI, King of France,:
> For which conspiracy they were executed,
> And buried near this place,
> In the year MCCCXV.

It should be cased with wood during the alterations. There are other ancient remains in the chapel, which ought not to be removed or defaced.

EASTERN ARCHÆOLOGY.—The following is taken from an interesting communication by MM. Melchior de Vogüé & Waddington, published in the *Revue Archæologique*:—"I ask permission to take you with us into the mountains between Antioch, Aleppo, and Apamée, on the right bank of the Oronte. I am nearly tempted to refuse the name of ruins to a number of towns almost intact, and whose view transports the traveller to the midst of a lost civilization. In exploring those deserted streets, those abandoned courts, those porticoes in which the vine twines around mutilated columns, an impression is felt similar to that experienced at Pompeii. In fact, all those cities, to the number of more than 150, in a space of from 30 to 40 square miles, form a whole from which it is impossible to detach anything; and belong to the same style, same system, and same date,—that of the primitive Christian epoch, extending from the fourth century to the seventh of our era. The spectator is transported into the midst of Christian society—not the hidden life of the catacombs, nor the humiliated, timid, and suffering existence which is generally imagined; but a free, opulent, artistic life, in large stone houses, perfectly disposed with galleries and covered balconies, handsome gardens planted with vines, presses for making wine, cellars and stone cisterns for containing it, large underground kitchens, and stables: in squares, surrounded with porticoes, are elegant baths, magnificent-columned churches, flanked with towers, and encompassed by splendid tombs: crosses and monograms are sculptured in relief on the doors, and numerous inscriptions may be read upon the monuments. All these Christian towns were abandoned on the same day, probably at the period of the Mussulman invasion."

OZONE.—Dr. Cook, of the Bombay Presidency, has been conducting experiments with ozone. In 1861 he discovered that all trees yield ozone,—not the coniferæ only; and that the ozone increased as the foliage was at once luxuriant and in a position to enjoy a free supply of air. He believes he has proved that charcoal also is a producer of ozone. The Bombay Government has called on Dr. Cook to sketch a plan for the systematic registration of ozone throughout the Presidency.

RAILWAY TRAFFIC RETURNS.—The traffic receipts of railways in the United Kingdom amounted for the week ending the 16th of May, on 10,677 miles, to 553,441*l.*, and for the corresponding week of last year, on 10,237 miles, to 527,999*l.*, showing an increase of 440 miles, and of 25,442*l.* in the receipts. The gross receipts on fourteen railways amounted in the aggregate, on 7,290 miles, to 429,816*l.*; and for the corresponding week of 1862, on 7,036 miles, to 414,112; showing an increase of 254 miles, and of 15,704*l.* in the receipts.

THE HYDRAULIC PRESS.—At an official trial of Messrs. Westwood, Baillie, & Co.'s new 28-inch hydraulic press, erected in Woolwich dockyard, for bending and preparing armour-plates; the first test consisted of a trial of two 4½ inch armour-plates, made hot, forming a thickness of 9 inches of solid iron, which were placed in the press and bent to a curve of seven-eighths in the breadth of the plates in less than five minutes, at a pressure of 1,000 tons on the whole surface of the piston, the pump making 130 revolutions per minute. In the second trial the plates were adjusted so as to bring the pressure near the centre of the plate. The pump was then worked up to 1,539 tons by indicator, bending the two slabs of iron to a curve of one-half in their breadths. The third and last trial consisted of a simple test of the working of the pump and the strength of the press. The pump worked up to about 1,600 tons and exhibited no visible signs of weakness.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—A *conversazione* in connexion with the Society for the Encouragement of the Fine Arts was held on the 27th ult., at the Mansion House. Sir R. W. Carden occupied the chair. The gathering was rendered interesting by the presence of a party of New Zealand chiefs, dressed in the costume of their country. The chairman announced that the medals for 1862 had been awarded as follows:—In Historical Painting—To Mr. E. Crowe, for his picture of "De Foe in the Pillory," No. 457 in the Royal Academy Exhibition. In Genre—To Miss E. Osborn, for "Tough and Tender," No. 487 in the Exhibition of the Society of British Artists. In Landscape—To Mr. F. Danby, for "Evening," No. 350 in the Royal Academy Exhibition. In Water-colour Painting—To Mr. F. W. Burton, for "The Wife of Hassan Aga," No. 280 in the Exhibition of the Water-Colour Society; and to Mr. J. H. Mole, for "A Leisure Hour," No. 59 in the Exhibition of the New Water-Colour Society. In Architecture—To Mr. E. W. Godwin, for his design for "Northampton Townhall," now being erected, No. 8 in the Architectural Exhibition.

THE LUDGATE-HILL DISFIGUREMENT.—At the meeting of the Common Council, on the 28th ult., Mr. Deputy Fry, chairman of the Improvement Committee, brought up a report touching the proposed railway viaduct across Ludgate-hill. They stated that they had sought the advice of eminent engineers and surveyors as to the practicability of the connexion between the London, Chatham, and Dover Railway and the Metropolitan Railway being made by means of a tunnel; and at a consultation held on the subject, and at which were present Mr. Harrison, C.E., Mr. Bidder, C.E., Mr. Penrose, and Mr. Haywood, the engineer of the City Commissioners of Sewers, those authorities were unanimously of opinion that a perfectly practicable railway could be made from the bridge now constructing across the river to the Metropolitan Railway station in Victoria-street, by a tunnel under Ludgate-hill;—that such line would be cheaper in its construction than that which the company had authority to make;—and that it would enable the main station to be on a level with Farringdon-street, instead of being raised 18 or 20 feet above the ground, as the one at present proposed would be. Mr. Fry added that since the report had been prepared, Mr. Greenhill, the engineer, had submitted to him a plan which had for its object to combine in one bridge the two bridges which were about to be erected at Blackfriars, the railway bridge passing below the other, and forming a connexion with the Metropolitan Railway, and in a manner to obviate the necessity of a viaduct across Ludgate-hill.

A WOODEN LIBRARY.—An odd work is being carried out for exhibition at the Permanent Industrial Exposition in Vienna. It is a wooden library, that is, a hundred octavo volumes, the covers of which are formed of wood; the backs of bark, inscribed with the names of the trees they are made from; and the interiors of specimens of the leaves, flowers, fruits, &c., of the trees.

GUILD OF LITERATURE AND ART.—The long dormant Guild of Literature and Art has held its first practical meeting, Mr. Dickens, Mr. John Oxenford, Mr. Charles Knight, Mr. W. Wills, and others being present. The Society, it is stated, has determined to abandon the Life Assurance qualification, which is found in practice to be attended with difficulty and hardship. The Sickness Fund is also given up. The qualification will therefore consist of a payment of an entrance fee of two guineas, and a subsequent annual payment of one guinea. Three free dwelling-houses, with necessary fixtures and fittings, are forthwith to be erected on a piece of land, of two acres, given by Sir E. Bulwer Lytton; the remainder of the income of the Guild to be devoted to the granting of annuities to professional members.

THE METROPOLITAN SEWAGE QUESTION.—A printed letter, signed "Richard Dover," has been sent us with reference to the advertisement issued by the Metropolitan Board of Works for "tenders for the disposal of the sewage." In this letter Mr. Dover, of course, advocates the adoption of his own deodorizing and precipitating process. He charges the Board with disingenuousness and want of perspicacity in not at once adopting this process in preference to any other; since it had been favourably spoken of by their own engineer, Mr. Bazalgette, and others; and he urges that they ought to be "constrained to adopt that system" so approved. The House of Commons, he suggests, ought to make new and full inquiries respecting the utilization of the sewage, as "the Metropolitan Board either wants the disposition or is not sufficiently educated and disinterested or impartial to do so."

PROPOSED RESTORATION OF THE CHURCH OF ST. BARTHOLOMEW, SMITHFIELD.—A numerous meeting of the parishioners and others interested in the restoration of the ancient parish church of St. Bartholomew-the-Great, West Smithfield, has been held in the vestry room of the church, the Rev. John Abbiss, A.M., the rector, presiding. This church is a Norman structure of peculiar interest, dating from 1102 to 1123. There are but few specimens of architecture so entirely Norman as this; and it has been for many years a source of grief to the lovers of ancient art that so noble an edifice, exhibiting every facility for complete restoration, should have been allowed to continue in its present mutilated and degraded state. Resolutions approving of the restoration were passed, and a committee appointed to receive subscriptions, which were at once commenced, and the sum contributed in the room exceeded 800*l.* The total estimated amount required is about 4,000*l.* Mr. T. Hayter Lewis and Mr. W. Slater are the architects consulted.

BOROUGH OF LIVERPOOL: REPORT OF BUILDING SURVEYOR.—The 25th annual report of the building surveyor of the borough of Liverpool has been printed by order of the local health committee. It states that the erection of inferior dwellings under 12*l.* per annum has considerably decreased during 1862, compared with the average of former years. From this it is assumed that the demand for this class of property is fully met in the borough. During the past year, dwellings with a rental varying from 12*l.* to 25*l.* per annum, amounted to 1,145, against 1,040 in 1861: the new dwellings with a rental varying from 25*l.* to 35*l.* per annum, were 208, against 102 in 1861; and the new dwellings with a rental varying from 35*l.* and upwards, 141, against 62 in 1861. There is a very large reduction in the number of houses constructed with cellars for separate occupation. In 1861 there were 199 premises built on this principle, out of a total of 1,250, which was an improvement on many former years. In 1862, only 21 dwellings were thus constructed, out of a total of 1,516. In every instance of houses erected in streets provided with sewerage, water-closets have been insisted upon. The midden is said to be gradually disappearing from the Borough. Mr. Rishton concludes by saying, "It is simply an act of justice to the builders to state that in nearly every instance when plans of houses submitted for consideration have been found objectionable, the suggestions of the committee for improving their sanitary and other arrangements have been cheerfully complied with."

DWELLINGS FOR THE INDUSTRIOUS CLASSES.—A meeting is to be held this, Saturday morning, at the Mansion House, to complete the formation of an association to further the erection of dwellings, as introduced by Alderman Waterlow.

OPENING OF THE GRAND CAVOUR CANAL AT TURIN.—Prince Humbert, the heir apparent to the Italian Crown, presided at the ceremony of letting water into the Grand Cavour Canal on the 1st inst. An immense concourse assembled to witness the proceedings.

PETROLEUM OR PARAFFINE FOR LIGHTHOUSES.—At a recent meeting of the Liverpool Dock Board, a report from the Marine Surveyor on some experiments made with petroleum was read. From this it appeared that the oil burned for ten minutes, giving a good flame, when an explosion took place, blowing the lamp to atoms. The lamp used was the ordinary lighthouse lamp as at present in use, and the disaster is partly to be attributed to the fact that the lamp in question was unsuited for the description of oil to which it was applied; but partly also, we should think, to neglect of testing the oil and the use of too volatile a quality of it. The degree of heat, however, may be so great as to render all such oils improper for such a purpose.

THE ARUNDEL SOCIETY.—The fourteenth annual meeting of the members of this society was held on the 2nd inst., at their rooms in Old Bond-street, under the presidency of Lord Elcho, M.P., one of the members of the council. His Lordship was supported by Mr. Layard, M.P., Mr. W. Stirling, M.P., Mr. C. Buxton, M.P., the Bishop of Landaff, and others. In opening the business of the meeting, Lord Elcho congratulated the society on the steady advance that had been made during the last year. The society had struggled on from its foundation in 1858 for several years with only 400 members, and with its financial affairs and its engagements to its subscribers both sadly in arrear; but, owing chiefly to the active co-operation of Mr. Layard, it had steadily advanced until the present time, when they could boast of 1,650 members, an annual income of 4,000*l.*, and a balance in hand of nearly 800*l.* He more particularly congratulated the members on the latter fact, for it meant largely increased means of copying works of art now fast decaying, with a view to future publication.

SYDNEY AND MAITLAND, ANCIENT AND MODERN.—Twenty years ago Sydney *was* Sydney, but was far from being the Sydney it now *is*. The *James Baines* came in some time since from Liverpool, in sixty-four days, and her mail weighed seventy-five tons. Seventy-five tons of letters and newspapers was not the weight of a ship's mail to Sydney twenty years since: seventy-five pounds would be nearer the mark. "The Rocks" is a designation given to the undulating eminence which rises to Flagstaff Hill and falls to Lower George-street and Miller's Point. The Rocks *were* The Rocks twenty years ago, but they were not the Rocks they now *are*. Houses of eight small rooms let, four years since, for 150*l.* per annum, and a wine-vault opposite Wynyard-square for 14*l.* per week; but The Rocks were formerly *given* to old convicts, constables, and others to build huts on. The Rocks were considered worthless, and it is a well-known fact that "I'll sell my plot for a bottle of rum" was an offer often made, and plots sold for as many bottles of rum as they would now fetch thousands of pounds. It is very much less than the third of a century ago since a bushranger, the noted Jew boy, and a few companions, armed to the teeth, rode into the midst of a few bark huts and small houses, levying black mail on the unresisting inhabitants, bidding any wishful to oppose them to "bring their coffins with them." The bushrangers rode off at their leisure, and the few bark huts and small houses which constituted the Maitland of those days remained. Now the scene is changed indeed. Splendid steamers arrive daily, and twice daily, at a suburb of Maitland, having traversed the coast marine on their voyage hither from the metropolis of the colony. A railway 16 miles in length unites the coal-port of Newcastle to the many thousand peopled town into which the few bark huts and small houses of twenty and thirty years ago have grown. Maitland has divided into east and west, with many handsome public and private buildings. There are now found here churches, chapels, kirks, schools of art, mills, and stores of very handsome exterior and very capacious dimensions; whilst the suburbs and country adjacent contain towns and populations vying with the former population of the capital of New South Wales itself.—*Vanderkiste's "Lost, but not for Ever."*

FALL OF A CHIMNEY AT WIGAN.—A chimney of an iron foundry at Wigan has fallen to the ground, fortunately after the whole of the workmen had been alarmed. The chimney was 90 feet high, and in its fall it crushed the pattern shop.

TURKISH BATHS.—The half-yearly meeting of the London and Provincial Turkish Bath Company (Limited) took place on the 23rd ult., at the Hammam, Jermyn-street, when the report of the board of directors was unanimously adopted, and a dividend was declared upon all the paid-up capital at the rate of 6*l.* per cent. per annum.

BIRD'S EYE PHOTOGRAPHS FROM A BALLOON.—An attempt has been made by Mr. Negretti, by aid of Mr. Coxwell's balloon, to obtain photographs at a considerable height in the air. The photographs thus obtained are not as yet very successful; but it has been ascertained to be quite possible to take photographs in such a position. The chief difficulty arose from the rotary motion of the balloon, which Mr. Negretti thinks a change an the form of the car would obviate: he also contemplates new arrangements of the photographic tpparatus, and means to try again.

RESTORATION OF WINCHESTER CITY CROSS.—The citizens have resolved, with the approval and aid of the corporation, to open a subscription for the restoration of the cross of Winchester. At a recent meeting a committee was appointed to carry out the object in view; and Mr. Scott named as the architect to be consulted. At the meeting the Rev. C. Collier said the origin of the Cross was involved in obscurity, but, from researches he had made amongst the muniments in the custody of the Town Clerk, in conjunction with Mr. F. Baigent, he found that in 1440 it was spoken of as the High Cross, the "Altem crucem." One record showed that in Bishop Fox's time a poor Dutchman, who had been brought before the warden for reading his Dutch Bible, was sentenced to be led round the Cross with the Bible in his hand three times by Kingsmill, the city crier, and from thence back to the market, where the book was to be cast into a fire. From this it would appear that this was never a market cross, but one of the High Crosses where the laws were declared, proclamations made, judgments delivered, corpses rested, sermons preached, and sometimes malefactors executed.

HARBOURS OF REFUGE.—The annual return states that at Dover the extent of the foundations of the Admiralty pier, or west arm of the harbour, is now 1,675 feet, and the length of the quay level, 1,539 feet. The sum of 549,000*l.* has already been voted for these works, and 60,000*l.* will be required to be voted now, leaving 41,000*l.* of the estimate to be voted next year: the work should be completed in November, 1864. At Alderney the outer ends of the sea and harbour walls of the western breakwater are now 1,418 yards from the shore, or 148 yards short of the limit ordered. The base of the breakwater extends to 1,636 yards from the shore: 12,000 tons of stone have been deposited in the base below low water. The sum of 1,027,000*l.* has been voted for these works, and a vote of 80,000*l.* will be required this Session: the estimate was 1,300,000*l.* At Portland the net expenditure has reached 954,260*l.* The total quantity of rough stone deposited in this breakwater from the commencement is no less than 5,170,760 tons. The divers have now completed the levelling of one-half of the area, under the foundation courses of the masonry for the north head and fort, and have set about one-third of the bottom course.

MONASTERY AT GORTON, IN LANCASHIRE.—The foundation-stone of a monastery has been laid at Gorton, by the Very Rev. Canon Benoit, secretary to the Roman Catholic Bishop of Salford. The monastery is being raised by Franciscan monks (Recollets), of whom there are at present five, together with a number of lay brothers, resident at Gorton. The site is in Gorton-lane, between the Roman Catholic schools and the temporary residence of the order. The building will comprise a church dedicated to "Our Ladye and St. Francis," 180 feet long by 50 feet broad, in which there will be a choir for the accommodation of sixty monks; transepts; six confessionals; and several chapels. There will be cloisters for the monks and accommodation for guests within the monastery. A portion of the basement will be fitted up as a workshop, in which a considerable amount of time will be spent by the monks. The building will be of brick, faced with stone; will be surmounted by a tower at the west front; and will have a frontage of 280 feet; the whole possessing pretensions to architectural beauty. The estimated cost is 8,000*l.* The architects are Messrs. Pugin & Hanson.

STEEPLE JACK: A RIVAL TO BLONDIN.—The other day the inhabitants of Walker, on the Tyne, were astonished to see a man walking round the top of the high chimney at the Walker Alkali Works. How he had got there seemed a mystery, as the chimney was sending forth its usual smoke, and there was no scaffold or any visible means there to enable him to get up; but on inquiring, says the *Gateshead Observer*, we found this bold man to be a Mr. Delooze, employed by Mr. Wylde, of Manchester, who makes it his business to repair and fix lightning conductors to high chimneys, &c., and who had adroitly thrown a line over the chimney, by means of a large kite, and by this means had fixed stronger ropes and tackle, and had drawn himself up to his perilous-looking position. From this beginning he and his assistants have since formed a scaffold round the chimney, reversing the usual mode of scaffolding, by commencing at the top, in place of from the ground. The chimney is so damaged by muriatic acid gas, and out of repair, that it is unsafe, and it is intended to remove about eight or ten yards off the top.

THE VENTILATION OF THE HOUSE OF COMMONS. — Mr. D. Griffith having asked the First Commissioner of Works whether it would not be better to ventilate the house by opening the windows than by the present means,—Mr. Cowper said that, in his opinion, if the windows were opened as the hon. member proposed, the air would neither be so cool nor so pure as that which they had. The hon. member was in a mistake in supposing that the air came from a cellar. If the hon. member would take the trouble to go below he would see that the air was admitted in a natural way to the chamber below. There it was purified by being washed in a stream of water; and it was afterwards passed through canvas, where more floating impurities were extracted. It then came under the floor of the House, travelling at the rate of 1 foot per minute. This air was, in cold weather, warm; and in warm weather, it was ice down below. The object was to keep the air in all seasons at a uniform temperature of 64 degrees upon the thermometer. On Friday night, when the hon. member asked the windows to be opened, the thermometer stood on the outside at 78, and in the House at 65; and consequently, if his wish had been gratified, air 13 degrees warmer than that which they were breathing would have poured into the House.

DUNDEE.—Some further progress is being made towards the amendment of the eccentric distribution of premises in the streets and lanes of this town. In Seagate extensive premises have just been erected for Messrs. Jaffé's business. The front of the new building is in the Venetian style, and extends along the Seagate about 90 feet, and is 40 feet high from the pavement to the top of the parapet. This range is 82 feet wide, and consists of four stories. The first, second, and fourth are intended for warehousing purposes, and the third for offices. The buildings behind this front range consist of a basement and main story, the area being about 65 feet square. On the east of this, adjoining Sugar House Wynd, is a space appropriated for the engine and boiler-house, and the large covered court for loading and despatching goods. Altogether there will be upwards of 15,000 square feet of warehouse room for the brief storage of goods waiting packing and exportation. The premises have been designed, under the direction of Mr. J. H. Luis, the resident partner of the firm, by Mr. Jas. Maclaren, of Dundee, architect. The contractors were Mr. John Caird for the mason work; Messrs. Kidd & Son for the wright work; Messrs. Crabbe, Urquhart, & Gibson for the slater, plumber, and plaster works respectively. Messrs. Robertson & Orchar furnished the castings used in the construction; and Messrs. Carmichael are engaged upon the machinery.

TENDERS.

For nave and chancel of church, Caterham, Surrey. Mr. R. W. Drew, architect. Quantities supplied by Mr. J. A Bunker:—

Myers & Sons	£3,465 0 0

The *Engineer* of August 15th, in its description of Benson's Great Clock, says: "It is the best and unmistakeably the best-finished clock in the Exhibition." Benson's new show-rooms contain clocks designed by the first artists of the day, and include clocks for the drawing-room, dining-room, bed-room, library, hall, stair-case, bracket, carriage, church, turret, railways, counting-house, with musical, astronomical, and every description of clock, from the cheapest to the highest quality of which the art is at present capable. Church and turret clocks specially estimated for. Benson's Illustrated Pamphlet on clocks and watches (free by post for two stamps), contains a short history of clock and watch making, with descriptions and prices; it acts as a guide in the purchase of a clock or watch; and enables those who live in England, Ireland, Wales, the Colonies, India, or any part of the world, to select a clock.—J. W. Benson received a Prize Medal and honourable mention. — 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

MR. EDWIN WHITE will SELL by AUCTION, at 12, HOLBORN BARS, and 1, CASTLE STREET, HOLBORN, on TUESDAY NEXT, at TWO o'clock precisely, the above mentioned items, in numerous lots. View on Monday and morning of sale. Catalogues may be had.

HIGHGATE.—23 Acres of Freehold Building Land.

MESSRS. WINSTANLEY have received instructions to offer for SALE, by AUCTION, at the MART, on THURSDAY, JUNE 25, in lots, the remaining portion of the BROOKFIELD ESTATE, beautifully situate on the southern slope of Highgate Hill, and comprising about TWENTY THREE ACRES of LAND, suitable for building purposes, having extensive frontages, and commanding picturesque views. The land is very favourably from one to three acres, and many purchasers an opportunity to erect residences of a smaller class for their own occupation, and for the accommodation of persons carrying on business there in the City or at the West-end. The property is, at present time, in the combined advantage of its great railway and omnibus communication with a portion of the property, with the probability shortly of increased facilities, is within the privileged district, and a few minutes' walk only of the Highgate Grammar School.—Printed particulars may be obtained of Messrs. RANKEN, FORD, LONSDEBOROUGH, & LONSDBOROUGH, Solicitors, No. 3, Old Square, Lincoln's Inn, W.C.; of Messrs. DEW & CO. Solicitors, 2, Bennett's-hill, Doctors' Commons, E.C.; at the Place of Sale; and of Messrs. WINSTANLEY, Paternoster-row, E.C.

FREEHOLD BUILDING LAND, close to the Norwood Junction Station on the London, Brighton, and South Coast Railway, at which upwards of 100 trains stop daily for the London Bridge and Victoria stations, and only a short distance from a railway station on the Mid-Kent and Addiscombe Railway, about nine miles from London

MESSRS. WINSTANLEY have received instructions to offer for SALE by AUCTION, at the MART, Bartholomew-lane, on WEDNESDAY, the 1st of JULY, in fifty lots, the valuable FREEHOLD PROPERTY, known as the ENMORE PARK ESTATE, land tax redeemed and tithe-free; consisting of about twenty-three acres of most eligible building land, desirably situate between Woodside green, South Norwood, in the parish of Croydon, and the Norwood Junction station, commanding extensive views of the surrounding picturesque scenery, and within a short distance of the Crystal Palace. The estate possesses important frontages to the roads, and its principal roads, and presents rare advantages for the erection, on the plan of other residences for which there is a ready demand, and is healthy. The lots vary in quantity from one to about half an acre to two and a half acres, and in the hands of building capabilities this property offers attractions of no ordinary character. To be viewed. Printed particulars, with plans, may be had (only two days preceding the sale) at Croydon, of Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors; of Mr. JOHN BERNEY, Surveyor; at the Greyhound Inn, the Bedford Arms, Caterham-road, and the South Norwood; and in London, at the Place of Sale, and of Messrs. WINSTANLEY No. 10, Paternoster-row, E.C.

CITY of LONDON.—The LEASE of Excellent BUILDER'S PREMISES, with Dwelling-house, TO BE DISPOSED OF, in a busy thoroughfare.—Apply to Mr. ALFRED SMITH, Auctioneer, &c. 98, New Broad street, E.C.

SITE for BUILDING.—Portman Barracks. The SITE of these BARRACKS, with several houses adjacent thereto, TO BE LET on a BUILDING LEASE or LEASES, for a term of ninety years from Michaelmas 1863. A plan of the same may be seen, and further particulars ascertained, at Mr. HARDWICK'S Office, No. 1, Henrietta street, Cavendish-square, any day between the hours of TEN and FOUR o'clock. Proposals for taking the property are to be left at Mr HARDWICK'S Office, sealed up and endorsed "Proposal for the Sale of the Portman Barracks, &c." on or before the 24th day of JUNE next.

BUILDING LAND TO BE LET, on lease situate in the best part of Norwood, within ten minutes' walk of the Crystal Palace, and immediately adjoining the Gipsy Hill Station This eligible building ground is suitable for detached or semi-detached villas, which are in great demand. Money can be advanced to builders if required, at moderate rates of interest.—For particulars, apply personally to Mr. WILLIAM BACKHOUSE, Architect, 32, Southampton-buildings, Chancery-lane, W.C.

TO NOBLEMEN, GENTLEMEN, and OTHERS.—THE COTTAGE, Stapleford Park, Leicestershire, TO BE SOLD, by PRIVATE CONTRACT (to be pulled down and taken away at the purchaser's expense), the MATERIALS of The Cottage, in Stapleford Park, Leicestershire, for many years the residence of the late Earl of Harborough. The external walls of this exquisite residence are of stone, with a small quantity of bonded red brick and oak interspersed. The roofs, which are of oak, and other parts are of freestone, together with several enriched pieces of carved string-course and chimney heads. Many of the windows are filled with single panes of plate glass. There is also an ornamental turret, with clock and bells; and the outer doors, which are of oak, are perhaps scarcely to be equalled for strength and beauty of work. The interior consists of two entrance halls (each differently) and passages, three flights of stairs (two of carved oak and one of stone iron), drawing-room, large and small dining-rooms, library, keeping-room, &c. The materials of these delightful apartments are chiefly composed of polished oak open ceilings, with moulded joists; wainscot panelled sides, and oak or rich encaustic tile floors. On the first floor are six first-class bed-rooms, fitted up with taste and comfort, with attics over. The domestic offices include an excellent kitchen, servants' hall, scullery, larders, pantries, pickling-room, &c the latter fitted up with slate troughs, and several of them forming distinct buildings. Stapleford Park is distant about 1 mile from Saxby, 2 miles from Wymondham, and 4 miles from Melton Mowbray, on the Midland line of railway. The roads in every direction are excellent. For terms, further particulars, and order to view (for which 1s. will be charged) may be had of Mr. WATTON, Saxby, Melton Mowbray; or of Mr. W. LANGLEY, Estate and Land Agent, Surveyor, Auctioneer, and Valuer, High street, Stamford.

BALLAST.—Builders may be supplied with well burnt BALLAST, by applying to Mr. THURLOW Builder, on the Midland Park Estate, Haverstock hill, N.W.

L. & SON find it necessary to state that all the Ball and other Valves manufactured by them, have their NAME legibly marked thereon.

3s. 9d.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.

Manufactured by HENRY DOULTON & CO. LAMBETH.

MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

CARSON'S

ORIGINAL ANTI-CORROSION PAINT.

Patronised by

HE BRITISH GOVERNMENT, | H.R.H. THE PRINCE CONSORT,
HE RUSSIAN GOVERNMENT, | MOST OF THE NOBILITY & GENTRY, | RAILWAY & CANAL COMPANIES. COLLIERIES, IRONMASTERS, &c.

It is extensively used at home and abroad for all kinds of

OUT-DOOR WORK,

And has been proved, after a practical test of 70 years, to surpass any other Paint. It is applicable to WOODEN OUSES, FARM and other OUTBUILDINGS, AGRICULTURAL IMPLEMENTS, MACHINES, CONSERVA-ORIES, PARK FENCING, GATES, &c., IRON ROOFING, BRIDGES, HURDLING, and every description of ONWORK; while for

PUBLIC EDIFICES, MANSIONS, VILLA RESIDENCES,

And every kind of Brick, Stone, Compo, &c. it is unrivalled, presenting the appearance of fine cut stone.

The Anti-Corrosion is lower in price and lasts twice as long as the best White Lead.

The Anti-Corrosion is a Powder, sold in all colours, and will keep any length of time.

OIL, TURPENTINE, AND BRUSHES.

Prices, Patterns, and Testimonials sent upon application to

WALTER CARSON & SONS,

(SUCCESSORS TO THE INVENTORS),

9, GREAT WINCHESTER STREET, NEAR THE ROYAL EXCHANGE, LONDON, E.C.

NO AGENTS THROUGHOUT THE UNITED KINGDOM.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

anufacturers of Silicates of Soda and Potash, Aluminates of Soda and Potash,

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING STONE, CEMENT, STUCCO, &C.

pecimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

HE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and ate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo Silicic Acid. Bath, Caen, and er soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard e has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruc exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager he Company, Mr. DUDLEY, Architect, as above.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent either sold under the name of "Improved Zinc Paint," or as the manufacturer. Two or three qualities, no workman can produce good work with h material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much face as three hundred weight of white lead and twelve gal ons of oil

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

UNDERHAY'S PATENT

REGULATOR CLOSETS for constant or intermitting supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.

TO ARCHITECTS, BUILDERS, PLUMBERS, &c.

In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,

F. G. UNDERHAY

now manufactures on HIS OWN ACCOUNT his Patent Regulator Water-Closets, Valves Gas Meters, &c. on the same premises.

CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

Falcon-square, London, E.C.

Where the TRADE is supplied with the same superior quality made the name celebrated.

N.B. The names of T. KENT and CROWDEN & GARROD, are stamped on the brushes.

Also Manufacturers of the Patent India Rubber Knife-boards, Cocoa Nut Matting, Mats, &c. See Catalogue.

KENT'S PAINTING BRUSHES

are all stamped G. B. KENT & CO.

And are manufactured solely by G. B. KENT & CO. at 11, Great Marlborough-street, London, W.

Established 1777.

KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-four years, and may always be depended upon as the best that can be made.

PATENT GRAINING APPARATUS.—

TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.

N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

PRIZE MEDAL, 1862.

HAMILTON & CO.

No 10, GREEK STREET, SOHO-SQUARE, LONDON, W.

Sole Manufacturers of

C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL

PAINTING BRUSHES.

TURPENTINE.

GARROD & COMPANY'S ENGLISH TURPENTINE is superior in use to any other, and perfectly free from any offensive odour.

Sample gallons may be obtained at the Manufacturers', price 4s.

GARROD & COMPANY,

Varnish, White Lead and Colour Manufacturers,

56, Upper Thames street, London, E.C.

TO REMOVE or CLEAN OLD PAINT, VARNISH, &c. use NAENIARE & CO.'S PATENT LETHICIUM,

which does it in twenty minutes. Sold at 5s. per gallon. Also Brushes to apply and remove, 2s. per pair.—For particulars, apply at 11, St. Andrew's hill, London, E.C. Success guaranteed.

N.B. Country orders must contain a cheque or Post office order.

NOTICE.—Builders and Decorators will

find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, wainscot, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling-houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick-place, City-road, E.C.; Price 8s. per gallon. Post orders will have best attention.

IMPORTANT to BUILDERS.—This new system of staining cathedrals, churches, libraries, halls, &c. to resemble rich oak, &c. is most magical and exquisite, and only requires a trial to prove the estimated advantages realized in the finishing of work. Those who have not yet tried it should do so, being less expensive than the common articles.

HAY'S PATENT WATERPROOF GLUE

and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER-HANGERS, &c. &c.—The WATER-PROOF GLUE is a special and damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventative against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surfaces, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Gun wharf, Portsea, for Her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.

Manufactory, Chandos-street, Portsmouth: Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

IMPORTANT TO ARCHITECTS, BUILDERS, DECORATORS, AND OTHERS.

PLASTER ENRICHMENTS.

CENTRE FLOWERS, SHOP FRONT TRUSSES, VASES, ROYAL ARMS, CAPITALS,

And every description of ornament for internal and external decorations, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.

MESSRS. HERBERT, MODELLERS,

249, EUSTON ROAD ST. PANCRAS.

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

The only MEDAL for "STONEWARE PIPES" has been awarded to

HENRY DOULTON & CO. LAMBETH.

HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions inserted, in the event of requiring further communication.

Manufactured as per

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the Sewers and Drains may be examined and cleansed without disturbing the surface of the ground; adapted also for Ventilation of Sewers and Drains.

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

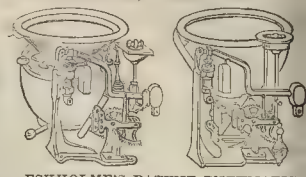
HENRY DOULTON AND CO.'S

PATENT COMBINED SMOKE AND AIR FLUES.

BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

THE air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.



Curves are made to suit any inclination.

Manufactured in terra cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to

Henry Doulton & Co. High-street, Lambeth

DURABILITY of GUTTA PERCH
TUBING.—Many inquiries having been made as to the D BILITY of Gutta Percha Tubing, the Gutta Percha Company have pl ure in giving publicity to the following extr. FROM SIR RAYMO JARVIS, Bart. VENTNOR, ISLE of WIGHT.—Second Testimonial "March 10th, 1858.—In reply to your letter received this morni respecting the Gutta Percha Tubing for Pump Service, I can st with satisfaction, it answers perfectly. Many builders other persons have lately examined it, and there is not the l material difference since the first laying, which is several ye ago, I am informed that it is to be adopted generally in the houses that being erected here."
N.B. From this testimonial it will be seen that the CORROS WATER of the ISLE of WIGHT has no effect on Gutta Per tubing.

SALES BY AUCTION.

VENEER KNIFE-CUTTING MACHINE.

MESSRS. FULLER & HORSEY will SELL by AUCTION, on TUESDAY, JUNE 16th, 1863, at ELEVEN o'clock, on the PREMISES, Eagle Wharf-road, New North-road a very powerful VENEER KNIFE-CUTTING MACHINE, capable of cutting from 16 to 70 veneers to the inch from wood 7 feet 11 inches long by 4 feet 8 inches wide, with rising and falling table 5 feet by 8 feet. Cast-iron planed bed, with screws, self-acting feed and reversing motion, overhead motion and driving shaft, made by Haley, Manchester. Also, a wrought-iron cylindrical STEAMING TANK, 5 feet diameter, 12 feet long. To be seen at any time by special order, which, with descriptive particulars, may be had of Messrs FULLER & HORSEY, 13, Billiter-street, London, E.C.

13, Billiter-street, 21st May, 1863.

VALUABLE FREEHOLD AND COPYHOLD BUILDING LAND, WHITECHAPEL, occupying a site of about six acres.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the MART, on WEDNESDAY, JULY 1, 1863, at TWELVE o'clock, in one LOT, a most important SITE of FREEHOLD and COPYHOLD LAND, about six acres, situate in the rear of the White Chapel Distillery, Bucks row, abutting upon the Eastern Counties Railway, from which a siding might be formed. And with approaches from Winchester street, Bethy street, and other adjoining streets. For the erection of any large manufacturing establishment this property is of large value, from its space and proximity to the City. Printed particulars are in course of preparation with plan, and may be had of Messrs. TENNANT & OAKLEY, Solicitors, Raymond's-buildings, Gray's-inn, W.C.; of Messrs. BOCKETT, SON, & BARTON, Solicitors, Lincoln's-inn-fields, W.C.; at the Mart; and of Messrs. FULLER & HORSEY, Billiter-street, London, E.C.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of about 200 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices (to save the expense of removal to the Brompton-road), in the following Marbles, viz.:—Statuary, Rouge Royal, Black and Gold, Black, Sienna, Burdille, Dove, California, St. Ann's, Rouge Jasper, Jeune Fleure, Brocatella, Genoa Green, Irish Green, Siena Reign, Emperor's Red, Irish Fossil, Campanne Melange, Sicilian, and various excellent specimens of British Marbles, varying in price from 1l. 10s. to 50l.; and for elegancy of design, workmanship, and quality, not to be surpassed in England. Purchasers to the extent of 30l. and 50l. approved bills of three and four months will be taken, less 25 per cent cash. Purchasers from the country will be supplied with packing-cases at the same packed and delivered to any of the metropolitan stations for 1 per cent. on the amount purchased.

HARROW.—A very desirable small Freehold Building Estate, most advantageously situate within half a mile of the Railway Station, with a privilege to residents of a First class Railway Pass, and of Nomination to Harrow School.

MESSRS. EDWIN FOX & BOUSFIELD will SELL by AUCTION, at the MART, on FRIDAY, JUNE 19th, at TWELVE, in one or more lots, a valuable FREEHOLD ESTATE, very desirably situate at Harrow, in the county of Middlesex, comprising about 16½ acres of eligible Building Land, possessing convenient frontages to two excellent leading roads, and affording great facilities for the erection of several detached and semi-detached villa residences, with ample garden grounds, the supply of which in the neighbourhood is utterly inadequate to the demand. May be viewed, and particulars had previous to the Sale of CHANNOCK, Esq. Solicitor, 8, Gray's-inn-square; at the MART; and at Messrs. EDWIN FOX & BOUSFIELD'S Office, 41, Coleman-street, Bank.

NORTHAMPTONSHIRE. — The DALLINGTON ESTATE, in the parish of Dallington, near to the town of Northampton, in freehold, nearly three fees and subject only to a trifling land-tax; comprising Dallington Hall, a large, elegant, and substantially-erected mansion, with several capital fitting, and numerous offices and appurtenances, consisting chiefly of market-gardens and accommodation lands, in immediate contiguity to Northampton, a great portion adapted for building purposes; the whole extending over 145a. 1r. 16p. Also the advowsons of the Vicarage of Dallington, and nearly the whole of the Village, the Manor of Dallington, with its sporting rights and privileges, various Fee farm Rents, &c.; rising a-side lieds of iron stone, which have produced royalties exceeding 1,000l. per annum during the last three years, the rental, including the royalties, woodlands, &c. being about 5,000l. per annum.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to SELL by AUCTION, at the MART, near the Bank of England, on TUESDAY, JULY 7, at TWELVE, in one or two lots, this important FREEHOLD ESTATE, comprising Dallington Hall, a substantial stone built mansion, pleasantly situate, close to the church and village, and overlooking some finely-timbered park lands, with plantations, excellent fishponds, &c. It contains fifteen bed rooms, large reception-rooms, a fine oak staircase and secondary staircase, and good domestic offices; extensive stabling and coachhouses, laundry, brewhouse, &c.; capital flower-gardens and pleasure-grounds, two walled kitchen gardens, with winery, conservatory, forcing pits, productive orchard, &c. The kennel of the Pytchley Hounds is within a few miles. The agricultural lands are of first-rate quality, and in the hands of highly respectable tenants. They are in an excellent state of cultivation, and the farmhouses and homesteads are in a good state of repair, and afford ample convenience for the proper cultivation of the land.

There are numerous occupations, consisting of market garden and accommodation lands, a considerable portion of which will, doubtless, be required shortly for building purposes, as the town of Northampton is rapidly spreading in the direction of the estate; also the Wheatsheaf Inn, in the village, and numerous cottages, nearly the whole of the village, with the exception of the almshouses and schools, is included; also Dallington Mill, which being so close to Northampton, is adapted for a good trade. The tenant of Dallington, with its sporting rights and privileges, the capital covers and plantations, known as Dallington-heath. The advowson of the vicarage of Dallington, with good vicarage house, situate, surrounded, and about 60 acres of very valuable glebe land, and the rent charge of 21l. 3s. 6d. per annum; various fee farm rents, amounting to about 50l. per annum, valuable beds of stone-pits, which have produced royalties amounting to upwards of 1,000l. per annum during the last three years. The estate, which forms an uninterrupted domain of 1,408 acres, is situate within a mile and a half of Northampton by Dallington-heath, and which possesses the advantages, both of a residential landed property and a large extent of town lands, rapidly increasing in value, and of, as yet, only very trifling out-goings, being entirely freehold, the land-tax only 87. 11s. 4d. per annum, will in the first instance be submitted to auction, in one lot, offering an opportunity for a most influential local influence. In the event of a sale not being effected in one lot, it will be immediately divided into two lots, when lot 1 will comprise the mansion, woodlands, plantations, farm lands, cottages, and village property, advowson, manor, fee-farm rents, &c., in all about 1,150 acres, forming an exceedingly compact landed estate; and lot 2 will comprise 255 acres, close to Northampton, consisting of market, garden, and accommodation land, Dallington Mill &c. forming an important tract of land, producing a large annual income, and capable either of being gradually converted into building land, or of immediate operations in a building scheme of large scale. Particulars, with plans, may be had of Messrs. HILLIARD, DALE, & STRETTON, Solicitors, 3, Gray's-inn-square, W.C.; of GEORGE ANNESLEY, Esq. No. 61, Lincoln's-inn-fields, W.C.; of Mr. W. J. PEIRCE, Auctioneer, Northampton; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 16, Waterloo place, Pall mall, S.W.

HOLLINGSWORTH will SELL by AUCTION, at his SALE ROOMS, 14, High Holborn, on MONDAY next, at TWELVE o'clock, a variety of BUILDERS' GOODS; also a valuable steam-engine, enamelled mangers, stallposts, 300 iron sheep and cattle hurdles, iron pig-sty and guttering, 1 pair foundry stoves and ranges, paperhangings, and various articles used by builders and carpenters May be viewed and catalogues had on Saturday.

NEW BARNET, HERTS. Valuable Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY JUNE 8, 1863, at TWELVE for ONE, FORTY EIGHT LOTS of eligible FREEHOLD BUILDING LAND, land-tax redeemed, situate within a few minutes' walk of the Barnet Station on the Great Northern Railway, and commanding extensive and beautiful views of the surrounding country. The Metropolitan Railway being now open, brings the property within half an hour's ride of the City, and makes it a very desirable locality to reside a short distance from town. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in eighteen by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of Sale may be obtained more than seven days before the Sale, at the Railway Hotel and Refreshment Rooms, New Barnet; of Messrs. RUSSELL & DAVIES, 70, Coleman-street, London, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

ACTON, MIDDLESEX.—A well-stocked Orchard, and valuable Freehold Building Land, five miles from the City.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, JUNE 8, 1863, at TWELVE for ONE, a well-stocked ORCHARD and eligible FREEHOLD BUILDING LAND, with frontages to Bilio bridge road, near to the village of Acton Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years by equal half yearly instalments, but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained at the Inns in the neighbourhood; of Messrs. RUSSELL & DAVIS, 50, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale

CROYDON, SURREY.—Excellent Building Materials.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES close to the town of Croydon, on MONDAY, JUNE 22, 1863, at TWELVE for ONE o'clock precisely the FIFTEENTH PORTION of the excellent BUILDING MATERIALS of some of the Houses belonging to the Addiscombe College, comprising about seventy lots of large quantity of bats, paving stone, stone sills and coping slates for roofs, stoves, wainscoting and grates, about 100 squares of sound joists, floor boards, roofing boards, lintels, purlins, &c.; chimney pots, iron water pipes and gas piping dressed, &c. &c. May be viewed on the Friday and Saturday previous, when Catalogues may be had at the Yard of the Foreman on the Estate; and of the Auctioneer, 14, Moorgate-street, E.C.

PLUMSTEAD, KENT.—Freehold Estate, comprising a brick-built House, Five Cottages, outbuildings, and about Two-and-a-half Acres of Land, suitable for Villas.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the TOWN HALL, Woolwich, on FRIDAY, JUNE 26, 1863, at SIX for SEVEN o'clock in the evening, a FREEHOLD ESTATE, consisting of a brick built House, containing attic, tile roof; on the second floor, two large bedrooms, first floor, four rooms; ground floor, two large bedrooms, two parlours, store-room, kitchen, cellars, &c. A specious two-story Villa, and Nos. 1 and 2 Cottages, in all let at two rates of market garden Land in the rear; land tax redeemed; suitable for building purposes; situate off the high road from Woolwich to Erith, within a short distance of the Arsenal Station, and near to the Plumstead Station on the North Kent Railway. The whole will be first offered in one lot and if not sold, the premises will be offered in two lots, and the land in twenty two lots for building purposes. Nine tenths of the purchase money may remain on mortgage or contract at five per cent. to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained two days before the sale, of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; of Mr. JOHNSON, on the Shooter's Hill Estate; of Mr. R. GREEN, Richard-street, Woolwich; and at the Place of Sale.

WIMBLEDON, SURREY Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, JUNE 22, 1863, at TWELVE for ONE o'clock, in 62 lots, the remaining portion of the valuable FREEHOLD BUILDING LAND, free from tithe and land-tax, with frontages to the new road called Hartfield-road, close to the Wimbledon Station, on the main line of the London and South-Western Railway. Nine-tenths of the purchase money may remain on mortgage or contract, at five per cent. to be paid in nine years by half-yearly instalments, but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained two days before the sale, of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; and of the Auctioneer, 14, Moorgate-street, E.C.; and at the Place of Sale.

ADDISCOMBE COLLEGE, CROYDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the GREYHOUND INN, Croydon, on TUESDAY, JUNE 30, 1863, at SIX for SEVEN o'clock in the Evening, a further portion of this eligible ESTATE, late the property of the Hon the East India Company, consisting of about 32 Lots of eligible FREEHOLD BUILDING LAND, with frontages to the St. James's and Park-roads. The lots are well adapted for a good class of Villa Residence. The property is within ten minutes' walk of the New and East Croydon Station; about a mile of that at West Croydon; and with the Addiscombe Railway is completed the station will be on the estate, thus bringing the property in constant communication with the City and West End at all times of the day. Nine-tenths of the purchase money may remain on mortgage or contract at five per cent to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained of Messrs. PULLEN, HORNE, & EVERSFIELD, 41, Parliament street, Westminster, and 80, Fore street, City; and at the principal Inns in the neighbourhood; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale

EAST HAM, ESSEX.—Fine old Family Mansion, formerly a Royal residence, with beautiful grounds, and 30 acres of Land, situate within a mile of the Railway, and valuable for building purposes

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, JUNE 16, at TWELVE, in four lots (unless previously disposed of by private contract), the very valuable COPYHOLD ESTATE, known as Greenstreet House, situate close to the Barking-road, in the parish of East Ham, Essex; comprising a spacious family mansion, containing ten bed chambers and two dressing-rooms, three reception-rooms, including a capital drawing-room, 32 feet 6 inches square, with a handsome panelled hall, 37 feet by 20 feet; corridor or picture gallery, 50 feet in length; and extensive domestic offices; large coach-house, with granary over for forage; eight brick cottages, double coach-house, laundry, gardener's cottage, aviary, cowhouse, and other requisite outbuildings; beautiful lawn and ornamental grounds, adorned with several magnificent cedars and other choice trees, picturesque evergreens, and flowering shrubs; the whole enclosed within a high wall, rendering it delightfully retired and private; productive fruit and vegetable gardens, orchard, and pasture land of very rich quality. In the grounds is the famous Anne Boleyn's Tower, from which a very extensive view is obtained; adjoining are several enclosures of rich meadow and arable land, also four cottages, the whole comprising nearly 30 acres. The property was formerly a palace of King Henry VIII.'s, and a considerable portion of the original architecture is in good preservation; the beauty of the grounds is probably unequalled within a like distance of London, and in addition to its attractions as a residence, the whole is exceedingly valuable for building purposes. The estate is a deep gravel, and there is an abundant supply of fine spring water -Particulars of Messrs. LOXLEY & MORLEY, Solicitors; and of Messrs. DEBENHAM & TEWSON, Auctioneers, 80, Cheapside.

KENT—A small Freehold Estate of 24 acres, in one of the most beautiful parts of the county, offering a choice site for a residence.

MESSRS. DEBENHAM & TEWSON will SELL by AUCTION, at the MART, on TUESDAY, JUNE 16, at TWELVE, a FREEHOLD ESTATE, called Gedge's or King's Farm, situate near Mattell's green, in the parish of Brenchley, about a mile and a quarter from Paddock Wood Station. It consists of upwards of 24 acres of prime arable, orchard, and hop land, and is now in occupation of J. M. Hooker, esq. The property occupies an elevated position, the views from it are superb, it contains a good spring of water, has an extensive frontage to a turnpike road, is within easy distances of Tunbridge and Tunbridge Wells, and affords a very desirable opportunity for a gentleman who seeks a site for a residence in this highly attractive district Particulars and plan of WILLIAM DAY, Esq. Solicitor, 1, Queen-street, Mayfair; and of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

UNRESERVED SALE.—SUTTON, SURREY.—FREEHOLD HOUSES AND BUILDING LAND

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on FRIDAY, JUNE 19, at TWELVE, without the slightest reserve, TWO FREEHOLD DWELLING-HOUSES, situate in Carshalton grove, near the Sutton Station, in the most healthful part of the Sutton, each having six rooms, washhouse, and good gardens. Also Seven Plots of valuable Freehold Building Land, adjacent; comprising in all nearly two acres, fronting the new road recently projected over land, leading out of the high road from Sutton to Carshalton, within two minutes' walk of the Sutton Station, on the London and Brighton Railway.—Particulars of H. CHILD, Esq. Solicitor, Paul's Bakehouse-court, Godliman-street; and of the Auctioneers, 80, Cheapside.

COLNEY HATCH.—TO BUILDERS AND OTHERS.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on FRIDAY, JUNE 19, at TWELVE, in two lots, the CARCASES of SIX DWELLING HOUSES, Nos 12 to 18, St. John's-villas, Springfield-road, pleasantly situate within five minutes' walk of the Colney Hatch Station. Each house stands on a plot of ground 150 feet deep; is planned to contain five rooms, kitchen, and washhouse, and moderately estimated to produce a rent of 22l. when finished. Lease and ground rent to subsist for a long term, at a ground-rent.—Particulars of H. B. FARRINGTON, Esq. Solicitor, 32, Bucklersbury, and of the Auctioneers, 80, Cheapside.

SALE OF PLANT—TO ENGINEERS, MACHINISTS, CONTRACTORS, AND OTHERS.

MR. C. F. SMYRK is favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, Marlborough-place, Old Kent-road, on MONDAY, JUNE 8, at TWELVE, a nearly new TRACTION-ENGINE, 25 horse power, recently at work in repairing the Hampstead Reservoir, the contract being now completed; also several other powerful ENGINES, in working order, viz.:—A 6-horse portable engine, a Gwynne's centrifugal pump, a 7-inch contractor's pump to work by hand and steam, a 3-ditto ditto, sand crank shaft, a Bowser and Comer's patent derrick crane, note new, a 6-horse steam cauldron and 13-feet boiler, a small donkey engine, a horse chaff cutting machine, a quantity of wheels complete, an oat-and bean-crushing machine, a gravel-sifting machine, a hoisting gear with loose and fast pulleys, upwards of 100 feet of strong 3-inch manilla rope, wrought-iron door and frame, large grindstone, two portable forge bellows, anvil, and other effects.—May be viewed; and catalogues had three days prior, on the Premises; of Mr. C. F. SMYRK, Auctioneer, Surveyor, and Valuer, 19, Newington-place, Kennington road, S.

Under a Bill of Sale.—To Builders and Others.—Two capital Carts, lightly used, useful Mare, Harness, two Circular saw Benches, 2,000 feet of Spanish and Walnut Planks, large quantity of Ash Planks and Elm Boards, Beech and Birch Planks, Hickory Shaft-gay Planks, quantity of Birch Mahogany Boards, Birch Planks and Battens, &c., Builder's and Saw Mills Plant and Stock for immediate sale.

MESSRS. F. HALL & SON have received instructions to SELL by AUCTION, on TUESDAY, JUNE 9, 1863, at ONE o'clock precisely, on the PREMISES, adjoining the King's Arms, Chester-street, Kennington lane, the STOCK and PLANT of Mr. WILLIS, BUILDER, as above, comprising red and pale brick, yellow, white and picture pavior, deals and battens, cut various; red pots and white pipes, deals and battens, white, 20 feet usually in one length, a few feet of new seasoning and matured; a quantity of built, seasoning, cottage posts, ten stacks of new laid cant to joists, plates, and quartering; walnut-tree, five loads of cant to joists, new flooring, floor boards, one stack, one square timber, two capital circular saw benches, with set of cast steel saws, band, slabbing, cross cut, and complete; two carts, useful mare, harness, and about 40 tons of building materials and fittings, remnant from various buildings and repairs, and other miscellaneous effects May be viewed, and catalogues had on the Premises; and of the Auctioneers, Chester street, Kennington.

[For remainder of Auctions see p. xi.

The unsuccessful competitors will have their designs returned on application to Mr. MATHEWS, Solicitor, College court, Gloucester.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE TO BUILDERS.
TENDERS are required for the ERECTION of QUARTERS for the Families of Married Soldiers, at Netley Hospital, in the County of Hants.
Parties desiring to Tender for these works are required to attend at the Office on TUESDAY, the 30th day of JUNE, 1863, at TWELVE o'clock, to appoint a Surveyor to take out the quantities in conjunction with the Government Surveyor. Each party will be required to pay the sum of one guinea for the quantities.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Netley, 6th June, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of QUARTERS and STABLES for MILITARY TRAIN, at Netley Hospital, in the County of Hants.
Parties desiring to Tender for the execution of these works must leave their names at this Office, on or before the 30th day of JUNE, 1863, and pay the sum of Ten Shillings and Sixpence for the bills of quantities, which will be forwarded to each party, as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Netley, 6th June, 1863.

TO BUILDERS, &c.—CONTRACTS for a CHURCH.—TENDERS are required for the ERECTION of a CHURCH, at Cockermouth, in the county of Cumberland. Plans and specification will be deposited with Mr. JOS HEWSON, Ship Hotel, Market place, Cockermouth, on and after TUESDAY, the 23rd of JUNE. Sealed Tenders, marked "Tenders for New Church," will be received by the Rev H. L. FUXLEY, Cockermouth, up to WEDNESDAY, 24th JUNE, who will not be bound to accept the lowest or any Tender. Further information that may be required, may be had on application to Mr. BRUCE, Architect, Whitehaven.

COUNTY PRISON, GLOUCESTER.—TO BUILDERS.—The Visiting Justices are desirous of receiving TENDERS for the ERECTION of a GOVERNOR'S RESIDENCE in connection with the present octagon building at the south-east angle of the County Prison. Drawings, specifications, and conditions of contract, may be seen at the Office of Mr. MIDLAND, the County Surveyor, Clarence-street, Gloucester, on and after MONDAY, the 8th day of JUNE next. Tenders to be sent in, under seal, addressed to the Clerk of the Peace, Shire Hall, Gloucester, on or before the 22nd day of JUNE, endorsed "Tender for Governor's House, County Prison." The Visiting Justices do not bind themselves to accept the lowest or any Tender, as such must be submitted to the approval of the next Trinity Court of Quarter Sessions.
Gloucester, 29th May, 1863.

GUILDHALL, LONDON, 3rd June, 1863.—The Committee for Letting the Bridge House Estates will meet at Guildhall, on TUESDAY, the 16th instant, at TWELVE o'clock precisely, to receive PROPOSALS for REPAIRING LEASES of Several HOUSES and PREMISES, viz. Nos. 55 and 56, Union-street, St. George's-fields; Nos. 23 and 24, White-street; and Nos. 11, 12, 13, and 14, Union-street, Borough; Nos. 1 to 24, Mary Ann-buildings; and Nos. 6 and 7, Church-street, Deptford; and Two Pieces of Garden Ground adjoining. Plans of the Property may be seen, and further particulars and forms of Tender obtained upon, application at the Architect's Office, Guildhall.
FERDINAND BRAND, Comptroller.

BLACKFRIARS BRIDGE.—Notice is hereby given, that the Bridge House Estate Committee will meet at the Guildhall, on TUESDAY, the 16th day of JUNE next (instead of the 9th day of JUNE, as previously advertised), to receive TENDERS for the ERECTION of a TEMPORARY BRIDGE across the River Thames, on the east side of, and adjoining to, Blackfriars Bridge. The plans of the intended Bridge, and specifications of the Works to be executed, may be seen, and further particulars obtained, upon application at the Office of the Engineer, JOSEPH CUBITT, Esq. No. 6, Great George-street, Westminster. The Tenders must be sealed up, addressed to the Bridge House Estates Committee, endorsed "Tender for Temporary Bridge at Blackfriars," and left at the Committee's Office, Guildhall, before TWELVE o'clock on TUESDAY, the 16th JUNE; and the parties Tendering will be expected to be in attendance at Guildhall on that day at ONE o'clock. The Committee do not bind themselves to accept the lowest or any Tender that may be sent in.
FERDINAND BRAND, Comptroller.
Guildhall, 18th May, 1863.

STRATFORD-UPON-AVON LOCAL BOARD of HEALTH.—CONTRACT No. 10.—REMOVAL of MUD, &c. from the River Avon.—To CONTRACTORS.—The Local Board of Health for the District of Stratford-upon-Avon hereby give notice that they are prepared to receive TENDERS for EXECUTING the following WORKS:—Removing and clearing out the mud and other deposit and matter from a part of the bed of the River Avon, at Stratford-upon-Avon, and other works in connexion therewith. The plan, sections, and specification may be seen, and forms of Tender had, on application to Mr. THOMAS TAYLOR ALLEN, Surveyor to the Local Board, Bree street, Stratford-upon-Avon, on and after the 12th inst. Sealed Tenders, endorsed "Tender for Removal of Mud, &c. from River Avon," must be sent to the Office of the Local Board, Scholar's lane, Stratford-upon-Avon, addressed "To the Clerk of the Local Board of Health," not later than TUESDAY, the 23rd of JUNE inst. The Local Board do not bind themselves to accept the lowest or any Tender.
HENRY O. HUNT, Clerk to the said Local Board.
June 1st, 1863.

CONTRACTS.

BRISTOL LOCAL BOARD of HEALTH.
To PAVIORS and OTHERS.—The Local Board of Health of the City and County of Bristol hereby give notice that they intend to CONTRACT for THREE YEARS, commencing the 29th day of SEPTEMBER next, for the performance of the undermentioned Works, viz.:—

CARRIAGEWAYS.
1st.—For Hauling Stones from any place within the City and County of Bristol, and Laying the same in the Streets.
2nd.—For Re-pitching and Re-laying old Pitched Stones.
3rd.—For Hauling and Laying Rag Pitching.
4th.—For Re-laying Rag Pitching.
Persons wishing to engage in the above Works are requested to deliver in their TENDERS at the Offices of the said Local Board of Health, No. 14, Prince street, on THURSDAY Morning, the 2nd day of JULY next, at TEN o'clock precisely, on which day the Committee will meet to determine upon the same. A printed specification of the Works to be done, and a Form of Tender may be previously had, either on personal application or by letter, post paid, addressed to the Clerk, at the Offices, No. 13, Prince street, Bristol, where any further information may be obtained. The party contracting will be required to give sufficient security, to be approved of by the said Local Board, for the due and faithful performance of his Contract. The Local Board will not hold themselves bound to accept the lowest or any Tender.—By order of the Committee
JOHN G. HAVEN, Clerk.
Local Board of Health Offices, 13, Prince-street,
14th May, 1863

PROPRIETARY COLLEGE, MALVERN.
To BUILDERS.—The Council of the Proprietary College, Malvern, are prepared to receive TENDERS for the ERECTION of the NEW COLLEGE. The plans and specifications can be seen at the Offices of the Architect, at Malvern, or Clifton, on and after THURSDAY, the 11th of JUNE. Bills of quantities have been prepared by Mr. J. A. CLARK, at whom he had on the payment of one guinea. The Tenders to be delivered, under cover, to the Hon. Secretary, L. STUMMES, Esq. M.D. Malvern, not later than TUESDAY, the 23rd of JUNE, endorsed "Tender for New College." The Council do not pledge themselves to accept the lowest or any other Tender. They will require good and approved security for the due performance of the contract.
CHAS. HANSOM, Architect.
Clifton, May 29, 1863.

NOTICE to CONTRACTORS.—EXTENSIVE NEW WORKS at LEITH.—The Commissioners for the Harbour and Docks of Leith are prepared to receive TENDERS for the CONSTRUCTION of a RECLAMATION EMBANKMENT, Entrance Basin, Lock, Wet Dock, and relative Works, at Leith, in conformity with drawings, specification, and conditions, to be seen in the Offices of their Engineers, A. M. RENDEL, Esq. No. 8, Great George-street, Westminster; and GEORGE ROBERTSON, Esq. New Dock Works, Leith. Copies of the specification and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of contractors, may be obtained, by payment of three guineas, on application to Mr. RENDEL or Mr. ROBERTSON. No Tender made in any other form than that above referred to will be entertained; and the Commissioners do not bind themselves to accept the lowest or any Tender. The Tenders, sealed and marked "Tender for New Wet Dock and Relative Works, at Leith," must be lodged with JOHN PHIN, Clerk to the Commission, 14, Heriot row, Edinburgh, on or before WEDNESDAY, the 1st day of JULY next.
20th May, 1863.

NEW CHAPEL and SCHOOL-ROOMS, WATLING STREET, CANTERBURY.—Builders willing to CONTRACT for the above building, may see the plans, specification, and conditions, on and after THURSDAY, the 18th JUNE, daily, between NINE a.m. and FIVE p.m. by application to Mr. ANDREW PINNELL, 101, Parade, Canterbury. Tenders (sealed and endorsed) to be delivered to the Rev. VALENTINE WARD, 9, St. George's place, Canterbury, not later than MONDAY, the 29th of JUNE, at TWELVE o'clock noon. For any information, and for copies of the quantities, apply to the Architect. The lowest or any of the Tenders not necessarily accepted.
W. F. POULTON, Architect,
Victoria-road, Reading.

TO ROADMAKERS and OTHERS.—TENDERS are required for LAYING IN DRAINS and FORMING ROADS and PATHS to the Grove House Estate, Ealing, in close proximity to the railway station.—Particulars may be obtained of Mr. C. JONES, Surveyor, Hanwell Villa, Uxbridge-road, Ealing. The Freeholder does not bind himself to accept the lowest Tender.

DELAMERE, CHESHIRE.—The Commissioner in charge of her Majesty's Woods and Royal Forests hereby gives notice that TENDERS will be received for the ERECTION of a FARM-HOUSE and OFFICES, a HOMESTEAD, BAILIFF'S HOUSE, and LABOURERS' COTTAGES, at Delamere, near Hartford, in the county of Chester. Drawings and specifications may be inspected, on application to Mr. SAWYER, at the Abbey Arms Inn, Delamere, after the 10th instant, and further particulars can be obtained, on application to Mr. JOHN CLUTTON, 9, Whitehall-place, Westminster. Tenders to be sent in on or before the 22nd day of JUNE, addressed to the Hon. JAMES R. HOWARD, Office of Woods, Whitehall place, Westminster, S.W., endorsed "Tender for Works at Delamere."—The Commissioner does not bind himself to accept the lowest or any Tender.

TO BUILDERS and CONTRACTORS.—Parties willing to TENDER for the ERECTION of a NEW WESLEYAN CHURCH at Blackheath, Kent, may see the plans and specification on and after JUNE 18th, at the Offices of Messrs. MAYHEW & CALDER, Architects and Surveyors, 4, Charing cross, or at my Office, 1, Belmont, Bath. Tenders, directed "To the Committee of the New Wesleyan Church, Blackheath," to be sent to J. B. INGLE, Esq. 2, the Grove, Belmont Hill, S.E. on or before the 25th JUNE. Quantities are taken out, and can be obtained for each copy. Neither the lowest nor any other Tender will necessarily be accepted.
JAMES WILSON, F.S.A. Architect.
1, Belmont, Bath.

For remainder of Contracts see next Page.

CONTRACTS.

WANTED, CARRARA MARBLE CHIPPINGS. The smallest pieces, even the dust, if clean, will answer the purpose. Quote lowest price per ton, and the quantity per week that could be supplied.—Address, P. G. Post-office, 231, Blackfriars-road.

GAS WORKS TO BE SOLD or LET. TO BE LET, by TENDER, for a term of seven, fourteen, or twenty-one years, at the option of either party, all those GAS WORKS and PREMISES, situate at St. Ives, in the county of Cornwall, known as the "St. Ives Gas Works, comprising a gas-house, dwelling-house, coke-yard cellar, coke-house, and yard, with the plant thereto belonging, and a commodious piece of ground adjoining the same. These works are conveniently situated, near the sea, at a low level, and are capable of great extension. A considerable length of new mains has recently been laid, the whole is well worthy the attention of enterprising capitalists. The taker will be required to enter into a lease containing the usual covenants, and to execute a counterpart thereof.

For viewing the premises, and for further particulars, application may be made to the undersigned, to whom sealed Tenders, stating the utmost rent that will be given, should be forwarded on or before the 1st day of JULY next, soon after which the person whose Tender may be accepted will have notice thereof. The proprietor would not object to sell the works at a fair value.

W. TOLMIE TRESIDDER, Solicitor, St. Ives.

Dated St. Ives, 6th June, 1863.

CROYDON. — To BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of a RESIDENCE, to be built on the Haling Park Estate, can see the plans and specification at the Office of the Architect, on and after FRIDAY the 19th instant. Tenders to be sent in not later than WEDNESDAY, 1st JULY, at TWELVE o'clock.

JOHN BERNEY, Architect and Surveyor.

61, North-end, Croydon, 11th June, 1863.

TO CONTRACTORS.—To SLATE QUARRYMEN.—TENDERS are WANTED for the MAKING of ROOFING SLATES from two quarries situate at Honister, near Buttermere, Cockermouth, Cumberland, and within 300 yards of each other. One of these quarries is wrought by the rope practice, the other by ladders and coke candle lights. Also, the REMOVING of 2,000 cubic yards of OLD QUARRY RUBBISH, at Bowscar Quarry, situate at the mile's distant from the others. Contractors to have the use of waggons and rails for removing and working the same.—Apply to SAMUEL WRIGHT, Slate Merchant, Cockermouth, who will treat for the same. The proprietor does not pledge himself to accept the lowest or any Tender.

Cockermouth, 9th June, 1863.

TO ROAD-MAKERS. — BROMLEY, KENT.—TENDERS are required for FORMING and MAKING about two miles of ROADS. A plan, specification, and conditions may be seen every day at my Office.—Tenders to be sent to me on or before TEN o'clock on FRIDAY, the 26th JUNE next market on the ground. Tender for Roads." The Owner does not bind himself to accept the lowest or any Tender.

16, Walbrook. JOHN WHICHCORD, Architect.

TO BUILDERS.—Persons willing to contract with the Justices of the County of Kent, for the ERECTION of a POLICE STATION at SEVENOAKS, may see the plans and specifications at the Office of the County Surveyor, Maidstone, any day, except Sundays, between the hours of TEN and FIVE. The work is to be tendered for agreeably to the Form of Tender to be obtained at the County Surveyor's Office, where sealed Tenders, endorsed "Tender for Sevenoaks Police Station," are to be delivered by NINE o'clock a.m. on THURSDAY, the 25th instant; and persons desirous of tendering are to be in attendance at the Courts of Justice, Maidstone, at HALF-PAST TWELVE o'clock on that day. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars; and security will be required for the proper performance of the contract.

H. A. WILDES, Clerk of the Peace.

Maidstone, June 8, 1863.

TO SEWER CONTRACTORS and OTHERS.—THE WORSHIPFUL COMPANY OF HABERDASHERS are desirous of receiving Tenders for the DRAINAGE and WATER SUPPLY of their PENSIONERS' ALMS-HOUSES at Horton. Plans and specifications of the intended works may be seen at the Office of the Surveyor, Mr. WILLIAM SNOOKE, 6, Duke-street, London Bridge, S.E. on and after MONDAY next. Tenders, addressed to "The Clerk," to be delivered at Haberdashers' Hall, Gresham-street, not later than WEDNESDAY, the 24th of JUNE, at TWELVE o'clock. The Governors do not bind themselves to accept the lowest or any Tender. JOHN CURTIS, Clerk.

June 11th, 1863.

WYCOMBE UNION.—PARISH of CHEPPING WYCOMBE.—To HOUSE and LAND VALUERS, ESTATE AGENTS, ENGINEERS, &c. OTHERS.—Notice is hereby given, that the Guardians of the Poor of the Wycombe Union are prepared to receive TENDERS up to the 27th of JUNE instant, for the VALUATION of the whole of the RATEABLE PROPERTY in the Parish of CHEPPING WYCOMBE, pursuant to an order of the Poor-law Board, issued under the provision of the 6th & 7th Wm. IV. cap. 96, with the following are among other conditions imposed by the Guardians.—That the valuers to be selected must, upon the receipt of any Tender, shall be subject to the approval of the Poor-Law Board. That the valuer shall be bound to complete his valuation on or before the 25th of DECEMBER next. That the valuer shall also be bound to sign this valuation in case of appeal before the Union Assessment Committee, Special and Quarter Sessions, for seven years from the date of his contract, he being called only by the sums allowances provided by the regulations of the committee. Parties may be required to attend. The valuer to have the use of the maps belonging to the city churchwardens and overseers, and which are in possession of the parish clerk. The acreage of the parish is 6,000. Population, according to last census, 4,175; number of houses, 760. Tenders must be sent to be left at the Union-House, on FRIDAY, the 27th of JUNE next endorsed "Tender for the Valuation of Chepping Wycombe." The Guardians do not bind themselves to accept the lowest or any Tender. By order of the Board,

THOS. J. REYNOLDS, Clerk to the Guardians.

High Wycombe, 3rd June, 1863.

TO BE LET, by TENDER, for a term of five years, or from year to year, that long-established and well-accustomed Spirits Vaults and Public House known as the DOLPHIN INN, situate in the chief thoroughfare in the principal business part of the borough of Hanley, Staffordshire Potteries. The tenancy may commence in August next, and Tenders, addressed to the Arbitration of the late Mr. ALDCROFT, Esq. Uxbridge Stoke-on-Trent, will be received by him, on or before the 1st of JULY next. The Advertisers are not bound to take the highest or any offer; but they will select, without prejudice, the most eligible applicant.

THE Board of Works for the Fulham District, Office, Broadway House, Hammersmith, hereby give Notice that they are desirous of receiving TENDERS for the SUPPLY of GRAY PIT PLINTS, to be delivered in such quantities and at such times as may from time to time be required by the Board or their Surveyor. Orders for Plints to be delivered alongside of either of the Wharfs or Draw Docks on the banks of the Thames and Pulham, as may be directed at such times, for a period of twelve months, as may be required. Parties intending to tender are to state what time they will allow for the unloading of the barge from the time of notice to the Surveyor, or Overlooker, being delivered. The Plints to be of the best quality, and to be subject to the satisfaction of the Surveyor; and should they at any time be delivered of a larger size than is approved of by the Surveyor, the whole to be broken to the required size by the contractor, without extra charge beyond the amount of contract. The Tenders to be sent in on or before TEN o'clock on the forenoon of the 17th JUNE, 1863, addressed to the Chairman of the Board of Works for the Fulham District, and endorsed "Tender for Plints." The Board of Works have to state that no separate quotation for the delivery of the Plints will be entertained. The Board do not bind themselves to accept the lowest or any Tender.—By order,

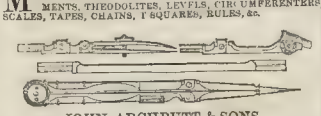
W. LOVELY, Clerk.

BUILDERS willing to TENDER for the ERECTION of an EIGHT-ROOMED DETACHED VILLA, at Camberwell, are requested to forward their names, &c. to the undersigned; who does not, however, bind himself to reply to all letters, or to accept the lowest or any Tender.

R. W. WIBLETT, Surveyor.

36, Southampton-buildings, Chancery-lane, W.C.

TO BUILDERS.—The Guardians of the Poor of the Parish of St. Mary, Rotherhithe, are desirous of receiving TENDERS for the ERECTION of an INFIRMARY, at the rear of the Workhouse, Deptford Lower-road, Rotherhithe. Plans and specification can be inspected at the Office of Mr. GEORGE LEGG, Architect, 61, King William-street, London-bridge, between the hours of TEN and FOUR. The Tenders to be delivered at my Office, No. 61, Parish-street, Rotherhithe, on or before TWELVE o'clock at noon of the 18th JUNE now last. The Guardians do not bind themselves to accept the lowest or any Tender.



June 11, 1863. R. SHAPTO HAWKS, Clerk.

TO CONTRACTORS, ROADMAKERS, and OTHERS.—TRANMERE IMPROVEMENT ACT, 1863.—The Local Board for the District of Tranmere, as authorised by the above Act, require TENDERS for the construction of a MAIN SEWER in the Valley leading from Whetstone-lane southwards, with the requisite Junctions, Branches, Manholes, Gullies, and Ventilating Shafts, and for the MAKING of a ROAD over the same, being a length of about 3,600 yards. Plans, sections, and specifications, &c. may be seen on application to Mr. W. A. RICHARDSON, C.E. Surveyor to the Local Board, at his Office, Holt-hill, Tranmere, on and after MONDAY, 22nd JUNE next, and copies of the specification and form of Tender may be obtained on payment of 1l. Sealed Tenders, made on the printed forms only, to be addressed to me, and left at my Office not later than THURSDAY, 23rd JULY next. Contracts and bonds will be prepared by the Law-clerk to the Local Board at the expense of the contractors. Security will be required for the due performance of the work. The Local Board do not bind themselves to accept the lowest or any Tender. By order,

GEORGE LLOYD, Law-clerk to the Local Board.

Public-office, Holt-hill, Tranmere, 25th May, 1863.

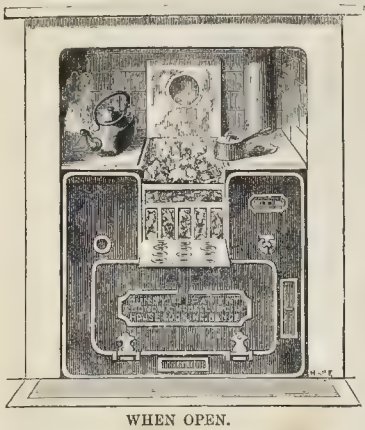
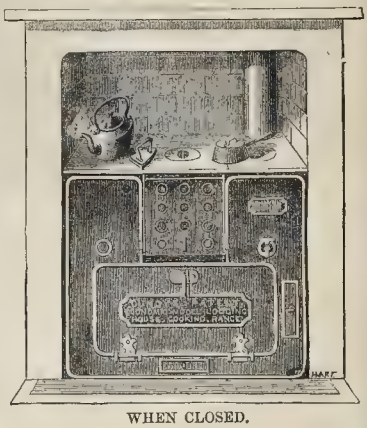
These Stoves give a considerable heat with a small consumption of coal.



EDWARDS & SON,

STOVE GRATE & KITCHEN RANGE MANUFACTURERS,

No. 49, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.



MARBLE OR STONE FENDERS, WITH METAL FITTINGS AND TILE HEARTHS COMPLETE, SUPPLIED AND FIXED.

CUNDY'S MULTUM IN PARVO ECONOMIC POOR MAN'S KITCHENER.

WHEN OPEN.

These drawings represent a Stove of the following dimensions:—24 inches long, 24 inches high, and 15 inches deep, when used as an open fire-stove, and also when closed, for BAKING, BOILING, and IRONING. The oven, which is placed underneath the fire, is 18 inches long, 14 inches deep, and 11 inches high. The flue passes all round the Oven, and the Boiler will contain six gallons of water. This Stove, which is also made 30 inches long, 26 inches high, and 15 inches deep, is admirably adapted for BACK KITCHENS, as an auxiliary Cooking Stove, and for STILL-ROOMS, NURSERIES, and SMALL HOUSES, the consumption of coal being only 112 lbs. per week. This Stove, also Cundy's Patent BRICK OVEN Double Fall-down Bar KITCHEN RANGE; also Cundy's Warm-Air Ventilating Stove, suitable for CHURCHES, HALLS, STAIRCASES, and SCHOOLS, for which invention Mr. Cundy received the SOCIETY OF ARTS MEDAL, also a Medal from the Royal Commissioners of the GREAT EXHIBITION of 1851, can be seen in operation daily, at the Show-rooms of

WHEN CLOSED.

THE MANUFACTURER,

WILLIAM ADDIS, Nos. 6, 7 & 15, LEICESTER-ST. LEICESTER-SQUARE,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,

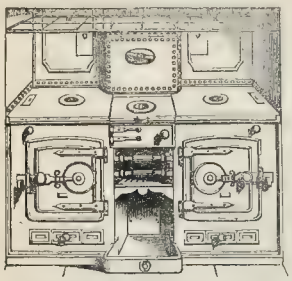
Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.

A PROSPECTUS AND REFERENCE WILL BE FORWARDED ON APPLICATION BY LETTER.

SMITH'S PATENT DOOR SPRINGS FOR SWING DOORS,

So universally known as to need no description; but to prevent the substitution of spurious imitations, it is necessary to see that the

ADDRESS, PRINCES STREET, HAYMARKET,



is STAMPED THEREON, such only being genuine and warranted by the Maker.

SMITH'S PATENT WEATHERTIGHT CASEMENT FASTENING,

Immeasurably superior to the Espagnolette Bolt, and

SMITH'S PATENT WATER BAR,

Are the only effective means of excluding the weather from French Casements. Approved by all the leading Architects, and applied to all the principal buildings in this country, and on the Continent. Models and Lists of Prices forwarded free on application. Every description of Engine, Machine, Ironwork, Repairs, &c for Builders and Ironmongers

FENDERS, STOVES, FIRE-IRONS, AND CHIMNEY-PIECES.

Buyers of the above are requested, before finally deciding, to visit

WILLIAM S. BURTON'S SHOW-ROOMS.

They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and General IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments, 3*l.* 15*s.* to 33*l.* 10*s.*; Bronzed Fenders, with standards, 7*s.* to 5*l.* 12*s.*; steel Fenders, 3*l.* 3*s.* to 11*l.*; ditto, with rich ormolu ornaments, from 3*l.* 3*s.* to 18*l.*, Chimney-pieces, from 1*l.* 8*s.* to 100*l.*; Fire-irons, from 2*s.* 3*d.* the set to 4*l.* 4*s.* The Burton and all other Patent Stoves with radiating hearth-plates.

WILLIAM S. BURTON, GENERAL FURNISHING IRONMONGER, BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES, SENDS A CATALOGUE,

Gratis, and post-paid. It contains upwards of 500 illustrations of his illimitable stock of sterling Silver and Electro-Plate, Nickel Silver, and Britannia Metal Goods, dish-covers, hot-water dishes, stoves, fenders, marble chimney-pieces, kitchen ranges, lamps, gaseliers, tea trays, urns, and kettles, clocks, table cutlery, baths, toilet ware, turnery, iron and brass bedsteads, bedding, bedroom cabinet furniture, &c. with Lists of Prices and Plans of the Twenty large Show-rooms, at

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

SAVING IN GAS.

D HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.

D HULETT & CO. 55, High Holborn, London,
Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

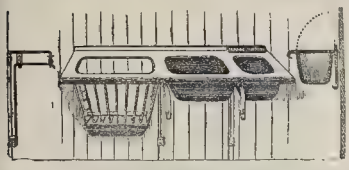
GAS PIPES AND FITTINGS.
CHANDELIERS AND BRACKETS.

THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)
Awarded to

COTTAM & COMPANY,

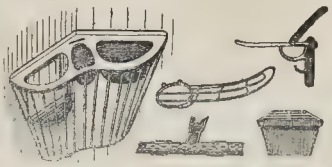


2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

As noticed at large at the Paris Exhibition,
Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom.
In use at her Majesty's Stables, Aldershott and Balmoral.



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wrought-iron Rack, united to an iron top-plate, and forming one complete and useful fixture, having COTTAM'S Patent Noiseless Halter Guide and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar.

COTTAM'S NEW PATENT SEED-BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the trough clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddles.

COTTAM'S IMPROVED SURFACE CUTTER, with perforated moveable cover, the use of which prevents concrete, &c. can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to
COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.
WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

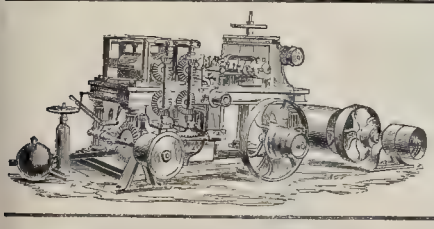
N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.



These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

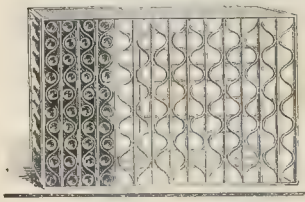
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

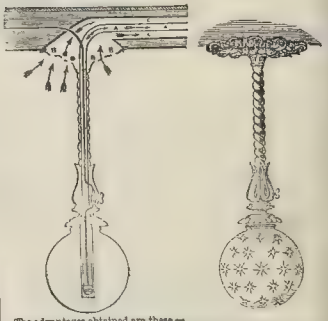
SAVES IN FUEL 50 PER CENT.!



A prospectus, containing a full description of its action, and numerous advantages, will be given on application to the Patentee,

G. LEWAL,
5 and 6, PHILPOT LANE, LONDON, E.C.
Agents Wanted.

West End Agents—BROWN BROTHERS, 43, Cranbourne street, Leicester square.

RICKETS & HAMMOND'S VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

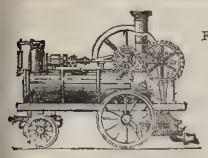
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

5, AGAR STREET, STRAND, LONDON, W.C.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.



J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.
New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid &c. &c. on hand, cheap.
THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.
A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent which is of no use for the purpose of Improved Zinc Paint, for as the number Two or Three qualities, no workman can produce good work with them. We have only one mark, the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates

1st. It is a non-conductor—2nd. It is portable, being packed in rolls, and not liable to damage in carriage—3rd. It effects a saving of half the timber usually required 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 2 lbs to the square of 100 feet, the cost of carriage is small. 6th. Under slate, metal, or tiles, it is a most effective, as well as

INODOROUS PROTECTION from damp walls and floors in damp rooms, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

Now ready, in roan tuck, gilt edges, price 6s. (postage 4d.),

THE ENGINEERS, ARCHITECTS, and CONTRACTOR'S POCKET BOOK (LOCKWOOD & CO'S, formerly WEALE'S) for the Year 1864. With Woodcuts and Eight Steel Plates.

"The present publishers deserve great credit for the improvements which have been introduced into 'The Engineer's Pocket-Book' since it came into their hands. The present edition contains several additions and improvements, and a few words of explanation as to practical results, and some brief memoirs of the scientific and other men of note recently deceased. The Tables for the reciprocal measurement of British measures of length, superficies, capacity, &c. for metric measures, and similar tables for the translation of measures of weight, which have been much wanted, will be found a valuable addition amongst many others introduced in 'The Engineer's Pocket-Book' for this year."—*Artizan*

"Another edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There are in each new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it."—*Civil Engineer and Architect's Journal.*

"Contains an immense variety of useful matter."—*Builder*

London: LOCKWOOD & CO., Stationers' Hall-court, E.C.

Just published, price Six Shillings,

A COURSE of GEOMETRICAL DRAWING, containing Orthographic, Isometric, and Perspective Projection, including the Projection of Shadows, the Principles of Shading, and the Practice of Making Finished Drawings. Designed as a Text book for the Use of Candidates preparing for the Practical Drawing for the different Public Examinations, and to meet the Wants of the Engineer, the Architect, the Builder, &c. &c.

By W. B. BINNS, M.C.P.

Part II.

London: JOHN WEALE, 59, High Holborn, W.C.

N.B. The Two Parts may be had separately, price 4s. each.

In one Volume, price 9s. 6d.

*** Mr. BINNS visits Schools and takes Private Pupils in Geometrical Drawing. All communications to be addressed to him at his Publishers.

THE ROYAL ACADEMY EXHIBITION.

THE ART-JOURNAL for June (price 2s. 6d.) contains a well-digested critical description of the Pictures and Sculpture now exhibiting at the Royal Academy, by a most competent Fine Art Reviewer; also descriptive Accounts of the Exhibitions at the "Institute of Painters" and "Society of Painters in Water-Colours;" the "Industrial Exhibition at Constantinople;" and the "Society for the Encouragement of Fine Arts;" together with Engravings, by J. C. M. Below, "The Bucklers Collection," "The Art Treasures of London Prize Plate;" "The Hard Woods used in Turnery and Wood-Engraving," by F. L. Simmonds; "On Constructive Materials in the Exhibitions," by T. D. Ansted, F.R.S. &c. The Fifteenth Section of the Catalogue contains—Silverwork, Porcelain, Sword Cutlery, Metal-work, Wall Decorations, Glass, Stoves, Pianofortes, Ornamental Iron-work, Cabinet Furniture, Chairs, &c. &c. The Line Engravings are "The First Day of Oysters," by George Greatbach, after G. Smith; "Stranded Vessel off Yarmouth," by R. Brandard, after J. M. W. Turner, R.A.; "The Fern," by J. B. Allen, after Thomas Allom.

London: JAMES S. VIRTUE, 26, Ivy-lane.

THE "OIL and COLOURMAN" (weekly) is of great value to ALL ENGAGED IN TRADE. ONE PENNY. HENRY VICKERS, Strand; and all News Agents.

BRYCESON'S ORGAN FACTORY, BROOK STREET, EUSTON ROAD, LONDON, N.W. Established 1796. Apply for PRICED CATALOGUE of St. Cecilia, Seraphine, and other Organs usually in Stock. Also as to the Tuning, &c. of Organs in all parts of the country. Church Organs of any size built, enlarged, or revolved, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

LEIGHTON, SON, & HODGE beg to intimate to Publishers, Printers, and the Public generally, that they execute in the best style and on the most moderate terms every description of WHOLESALE BOOKBINDING, either in Cloth or Leather, also Account Book Binding, with promptitude and punctuality. Their stock of ENGRAVED BRASS DIES is most extensive and varied, and designed in the best taste; and their powerful machinery and steam power give them great advantages in the rapid execution of large orders.

Applications for estimates will meet with prompt attention.

LONDON: 13, SHOE-LANE, E.C.

CARTS, LADDERS, BARROWS, &c.—GEORGE ELL & CO. Builders of Carts, Vans, Waggons, Trucks, and Manufacturers of Implements for Railways, Town use, Agriculture, and Exportation

LADDERS, BARROWS, TRESTLES, STEPS, PORTABLE SCAFFOLDS,

and every description of Contractors', Builders', and Decorators' Trade Requisites.

Vans, Waggons, Builders and other Carts, specially adapted for exportation; Pigmills, Dock rolls, Trolleys, and Portable Railways.

Scaffolding, Ladders, Barrows, Trestles, Steps, &c. Lent on Hire.

Price Lists on application.

GEORGE ELL & CO.

EUSTON WORKS, 366 and 368, EUSTON ROAD, LONDON, N.W.

PRIZE WAGGONS and CARTS.—HAYES & SON,

Manufacturers to Her Majesty's Board of Ordnance, and all the principal Railways in the Kingdom,

Coal and Cart Wheelwrights, Spring Van and Waggon Builders, Timber Merchants, Contractors, &c.

Manufacturers of Carts, Vans, Waggons, Trucks, and Implements for all Railways Town use, Agriculture, and Exportation.

Contractors and Builders' Dobbs and other Carts Barrows; Navvy, Excavators', Crowding, and Off-bearing ditto, on the shortest notice and of the best materials; &c.

HAYES & SON,
SCOTGATE WORKS, STAMFORD.

THE VILLAGE CLOCK.—A serviceable, well-made, and warranted TURRET CLOCK, to go eight days and strike the hours, for Forty Guineas; not to strike, from Fifteen to Twenty Guineas; adapted for the village church or school.

INTERNATIONAL EXHIBITION.

A sample of the Forty-Guinea Village Turret Clock may be seen in actions and striking, with dial and bell complete. Also a sample Turret Clock, from Fifteen to Twenty Guineas, suitable for school or stable, in Class 15, No. 3,245.

JOSEPH FAIRER,
Turret Clockmaker to Her Majesty's War Department.
182, St. George street East, London.

DENT, CHRONOMETER, WATCH, and CLOCK MAKER by special appointment to Her Majesty the QUEEN and H.R.H. the PRINCE of WALES, and MAKER OF THE GREAT CLOCK FOR THE HOUSES OF PARLIAMENT,

Invites attention to the superior workmanship and elegance of design of his Astronomical Clocks, Watches and Drawing-room Clocks.

Ladies' Gold Foreign Watches	8 Guineas.
Gentlemen's do. do.	10 "
Ladies' or Gentlemen's Gold English Lever Watches	13 "
Strong Silver Lever Watches	6 "
Gentlemen's Gold Compensation Balance Watches	40 "
Do. Silver do.	25 "
Marine Chronometers	25 "

Gold and Silver Pocket Chronometers, Astronomical, Turret, and Bracket Clocks, of every description. An elegant assortment of London-made Fine Gold Albert and Guard Chains, &c.

DENT, 61, Strand (adjoining Coutts's Bank); 34 and 35, Royal Exchange; and at the Clock and Marine Compass Factory, Somerset Wharf, Strand, London.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1859), 14, RUSSELL STREET, Covent Garden, London. Advances from 1,000*l.* to 1,500*l.* upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

MORTGAGE. TO BE LENT, 4,000*l.*, or in Sums of not less than 500*l.* on Freehold, Copyhold, or Long Leasehold Property.—Full particulars, with situation, &c. to be addressed to Mr. J. H. WEBBER, Solicitor, No. 9, Caroline-street, Bedford square.

TWO large STAINED GLASS CHURCH WINDOWS, of St. Paul's, 114 inches by 28½ inches, and of St. John's, 114 inches by 30¼ inches, by Gothic, 18*l.*; also a pair of rich WINDOWS, 74½ inches by 24 inches, four subjects from the life of our Saviour, 20*l.* sold to cover the advance; also a fine FRESCO, originally from the Pavilion, at Brighton, 20*l.*—Apply to Mr. HAMMOND, or HOUSEKEEPER, 3, Carey-street, Lincoln's-inn.

STAIRCASE HANDRAILS DONE FOR THE TRADE MATERIALS OR LABOUR. Address, G. G. 20, Underwood street, City-road.

MOIRA & HAIGH, 1, Lower Seymour-street, Portman square, Architectural, Engineering, and Landscape Photographers. Prize Medal awarded "for excellence of photographic treatment." Vignette portraits, &c.

NOTICE to CONTRACTORS and BUILDERS.—TO BE SOLD, by private contract, a large quantity of CHURCH FITTINGS in deal, with oak bock boards and caps, consisting of pews, five seats, reading desk, and an elaborate pulpit.—Application to be made to Mr. THOMAS KEYTE, Builder, Barford, near Warwick, who will give every information required.—N.B. Tile above are well worth the attention of parties fitting up churches or chapels, being in thorough repair, and can be taken to immediately.

The Builder.

VOL. XXI.—No. 1062.

The Architectural and Horticultural Decorations of Kensington Gardens.

IN our public parks and gardens we have nothing to show that can be compared with those of Versailles, the Tuileries, the Luxembourg, or even the Garden-Park of Brussels, if the adjuncts of statuary, fountains, and imposing architectural features are to be taken into consideration. Yet, in the lofty and luxuriant woods of Kensington, with the fresh green glades that extend far and wide beneath the shading branches of the noble trees, and in the spacious grandeur of the Broad Walk, we possess that which our foreign visitors allow to be unique as a metropolitan promenade.

At this season Kensington Gardens are in all their glory. The white and red hawthorns are covered as thickly with their bloom as in woods twenty miles away from the smoke of London; the double red and double white varieties being trees of goodly size; and they not only fill the scene with beauty, but at the same time scatter through the fresh spring air the fragrance of their exquisite perfume. Then there are the lofty horse-chestnuts, drawn up in the masses of the woods to a picturesque and lofty height, sprinkled, a week ago, to the very tops with their noble spikes of flowers that made them look like forest trees covered with the bloom of hyacinths. At this early season, too, all the foliage is still unsullied by those dusky hues which so quickly deaden the brightness of the various shades of young and tender green of the unlucky trees which expand their summer vestment in too close proximity to a vast aggregation of countless chimneys, whose copious outpourings of the dingy smoke of our coal fires make the summer brilliancy of London foliage so very brief. While, however, the foliage of Kensington Gardens retains its freshness, it is perhaps unrivalled, at all events unsurpassed, by that of any metropolitan promenade in Europe. But its chief beauties do not result from the works of the present generation, nor even from the care of recent management,—they are the consequence of the care and taste exercised by the artistic planters and distributors of the ground in the last century. It will not, therefore, be uninteresting to examine the present state of the gardens, with the view of ascertaining whether the most is now made of the inheritance that has come down to us.

As regards the architectural decorations, the first attempt in our day was the erection of the bridge over the Serpentine, some thirty or forty years ago, and this is still the best modern architectural feature in the gardens. It is simple in character, and its regular and undisturbed lines contrast pleasingly with the varied forms of the surrounding foliage. The almost unbroken lines of very simple architectural structures are always pleasing in contrast with the irregular forms of untrimmed woods, and the elliptic arches of this bridge, have, at the same time, a free and flowing air, which seems to harmonize more softly with water than the more cramped form of the semi-circular arch. The recent constructions at the head of the river are far less happy in their effect. They are too confused in their main outline, much over-ornamented and broken up in effect, and consequently do not offer a satisfactory contrast to the intricate outline of the surrounding foliage by the exhibition of simple and continuous lines. A little has been attempted in the way of statuary as a decorative feature in these last-named arrangements, but not felicitously. The unhappy Jenner, banished from Trafalgar-square, seems exercising a kind of forced presidency over some abortive attempt at a watercure, in a far from attractive manner; instead of which a few groups, not portraits, but of fanciful and poetic character, would have been far more in place. It is a site that might be fittingly enough decorated with statuary of the kind suggested, but is not a situation for the memorials of national worthies, either medical, military, or Mediæval. There are other parts of the gardens in which statuary either of a poetic or iconic character might be introduced with much better effect. Even good casts, in frost-proof cement, from some of the finest works of antiquity might be, if well placed, of great value as decorative features; but works, original works, from the chisels of living native artists would, of course, be far better. The site which lends itself with singular advantages to the introduction of statuary of a high class is the Old Broad Walk.

A series of statues on each side, at suitable distances, along the wide strip of turf in front of the open masses of trees, would produce a very noble effect; and the mere matter of cost is by no means an insuperable objection. In the line of this walk, too, opposite the palace, and between the walk and the round pond, is a proper site for a grand fountain. Not a little tazza, with a small squirt in the middle; nor yet, on a larger scale, a basin surrounded with a moulding, and having the squirt principle multiplied into several additional squirts; but a really fine work of art;—a composition in which the highest efforts of the sculptor and the architect should be blended, in a manner worthy of a national work. Instead of such an object, we have, in the present state of this part of the gardens, the view of an old brick house, by courtesy called a palace, which, as the American traveller said of the Roman ruins, is wretchedly out of repair. Even the grass plots in front of the building are only fenced in by some ragged privet hedges, full of gaps, which would be a disgrace to a third-rate tea-garden.

To this it may be added that a very squalid portion of the kitchen gardens of the establishment are in full view, where a straggling gardener or two may generally be seen at work, in covering or uncovering with worn-out tarpaulin, a very unregal range of cucumber frames. Turning away from these examples of the present mode of managing this beautiful national domain, and looking in an opposite direction, across the round pond, the spectator perceives a specimen of landscape gardening of the old grand school, which has come down to us in all its perfection of full growth, and all the beauty of ripe maturity; and only seems waiting to be turned to good account by the hand of an English Le Notre of the present day, if he is to be found. The three openings in the wood, which from this point are seen diverging from the wide space of green surrounding the pond, bear the true stamp of the high and large school of garden-art which produced the stately effects of the great gardens of Versailles, yet with the tone of far greater simplicity of treatment, and a wholesome feeling for more natural effect, which distinguished the English school of landscape gardening from the days of the Brownes to those of the Reptons; and this national peculiarity must not be lost sight of while seeking the introduction of suitable decoration. We must not have terraces of brick, and stone, and marble, and balustrades, and steps, and gravel, and pavement, and countless other features of the same class, to the exclusion of trees and turf, and flowers; but, the terrace, with its architectural dressings; and statuary, with its suitable accessories, must play a subordinated part to the existing features of the scene, in their present character, as specimens of nature reduced by art to certain regular forms, whether of mass or detail. The terrace-work, if any were introduced, should emanate from the grand architectural composition of the fountain, which should emphatically form its central object of any architectural dressing in this part of the gardens, as the plash of masses of falling water, would form a blending link with the natural features beyond. Statuary would find its proper place, alternating with noble vases of grand design along the old and new Broad Walks; and stone summer-houses, similar in style to the old one which still exists in tolerable repair in front of a mass of trees not far from the bridge, might be introduced as terminal objects to the great masses of wood which form the noble glades that radiate from the pond; but then they should be superior to the old model. Such an object is capable of great beauty.

The main enclosure of the gardens, especially that which separates their southern boundary from Hyde Park and the road to Rotten-row, ought also to receive artistic attention, and be made worthy of the most important and beautiful of our public promenades. The new gates on that side of the garden are well executed. But then there is a poor little hovel by way of a lodge actually in sight of this gate, and the old palisading forming a continuation to that on each side of the gates is wretched indeed, and quite unworthy of the situation.

The most successful piece of pure horticulture carried out under the recent management of the gardens is the new walk with plantation of trees, shrubs, and flowers, leading from the Kensington end of the Broad Walk to the Rotten-row entrance to the gardens. The walk is about 15 feet wide, and is formed of fine shingle, the light creamy tone of which is very agreeable; and when, in the bright morning sun, the shadows of the larger trees and shrubs cast a soft grey chequering across it, at intervals leaving irregular spaces of bright light between, the effect is very charming. A week ago (and perhaps still), the perfume of abundant wall-flowers, mingling with that of the hawthorn in full bloom, lent an additional charm to this beautiful walk, the borderings of which are in a thriving and healthy state. Promenaders are induced to linger long in this pleasant place, not only by the interest which the attached names of all the trees afford, but also by the exceedingly luxurious resting-place, in the form of handsome benches, the seats and backs of which are contrived in a leaning position, just at the angle which affords the most agreeable support. In speaking of the interest which the public evidently take in the attached names of the trees and shrubs, none of which are without their ticket, it should be remarked that there are several herbaceous plants in flower which at once attract attention, and which have no attached name at all. This is an omission which ought to be supplied. It may, however, be considered that, as the season has scarcely yet arrived for putting out the bedding plants and other border plants, the few herbaceous perennials now in flower may have tickets with names attached when the whole summer show of border flowers is exhibited.

So far the horticultural management may be said to be successful; but to other parts of the gardens the same remark cannot be applied. It is especially in situations which are favourite ones with the public that neglect and mismanagement seem to have occurred. The aspect of water, for

instance, is always attractive, especially when enlivened by the movement and striking plumage of various kinds of waterfowl; and it is, therefore, to the banks of the river that a large number of the promenaders in Kensington Gardens direct their steps. Yet here we find, instead of horticultural care, the utter wretchedness of squalid neglect. The south side of the water, from the bridge to the head of the river near to the Bayswater-road, which might be made the pleasantest part of the Gardens, is a mere scene of desolation. Some of the rhododendrons, it is true, are in a thriving state, and the aspect of a healthy bush of hardy rhododendron, merely as an evergreen shrub, without reference to its gorgeous blossom, is very pleasing; but only the perfectly hardy kinds are available for such a purpose. Yet in these plantations it would seem that some of the tenderest varieties have been tried, and the consequence is that they are in a dead or dying state, and produce a most wretched appearance. In most cases the dead plants remain, utterly destroying the agreeable aspect of the living ones; while in other cases they have either been removed, or have rotted away, leaving blanks almost as unsightly as the blackened skeletons just alluded to. The whole of the ground between the shrubs in the plantations has evidently not been dug, or even hoed and raked this season; and the wrecks of plants of last year's growth, decaying leaves, and a few rank weeds growing between, are sad evidences of neglect. It may be asserted that the aspect and general character of the situation is not favourable to flower culture, which one looks for in the front of these masses of shrubs; but the luxuriant growth of a few self-sown foxgloves show what a good effect might be obtained by the introduction of a few hardy herbaceous plants, if well selected with reference to the situation. Even if this were deemed impracticable, surely a little trim neatness might be managed without an over-exercise of ingenuity or outlay; but instead of this we find the reverse; and wherever the shrubberies cease and the green turf is allowed to extend to the water's edge, it is sadly broken up, and in a bad state.*

In addition to these defects, there is another in the management of this part of the Gardens, which arises from an impracticable attempt to establish a series of plant nurseries, for the general use of the parks, in this part of Kensington Gardens. Here we have, therefore, between the patches of neglected shrubberies (which might with more care be made very ornamental) small plantations of holly, privet, laurustinus, hawthorns, box, or pots of ivy—looking as miserable as it is possible to conceive—so miserable, that a nurseryman would at once cast them out, as worse than valueless, considering their aspect alone as detrimental to his credit as a cultivator. These hopeless attempts at creating stock plantations of young trees and shrubs at Kensington should be at once abandoned. The plants necessary for the continual renewals that must necessarily take place in metropolitan gardens should be reared in the purer air of Windsor or Hampton Court, where a few acres could easily be set apart for such a purpose, as well as for raising a succession stock of border flowers to keep the fronts of the shrubbery and the flower-beds continually fresh and gay throughout at least nine months of the year.

We have in Kensington Gardens not only a site, but also the great first elements of a public garden, in the shape of fine trees and beautiful turf, to enable us, under efficient management, to create the most beautiful public metropolitan garden in Europe; but at present, where nature and the original planting have done so much, the present management, and the available artistic talent of the day, have not done enough,—certainly not all that the public has a right to expect.

* Since this article was written, some geraniums have been planted here.

FOR ARCHITECTS AND SURVEYORS: ASTRONOMY.

MEMBERS of a profession or calling who aim at success through restricting themselves to study of what seems to relate only to the calling, must almost necessarily be narrow-minded men. They can never take high rank in professions enlisting, and requiring, exercise of mind. These have objects and aims that change with every fresh demand for services of the professor. The workman who has made pins' heads for the best years of his life, without thinking of another craft, will simply be thrown into starvation one day by the invention of a machine. But the architect, or follower of one of the so-called learned professions, must hold that there is *nothing foreign* to him; or scarcely can he be architect, or useful member of either of the "faculties." Practical architect, this day he is appealed to in some matter which presupposes his knowledge of the sciences,—geometry and mechanics, geology, chemistry, those relating to the motions of fluids, and others assumed to have been mastered as the foundation of his structural skill: artist-architect he should hardly be ignorant of optics, more than of the history of architecture and the examples. But, even yet, the sum stated of his requirements is not complete. No scheme of education issued from institute or college, concerns itself with, or could take in, the whole of that "liberal education" which is the office of the higher order of schools; and of which the theory may be described, scarcely with exaggeration, to be that of imparting, besides the primary education and the knowledge of languages, an acquaintance with the rudiments of everything. So much of this education as would enable the future man to "interest his heart in everything" that became the question of *experts*, or the topic of sections in an association or a congress, ought to be common in schools and colleges; yet, much as these have progressed since the period once spoken of by a nobleman who has been prime-minister of England, as the "pre-scientific age" in which he had been educated, we fear such modest standard has not been entirely reached.

The various branches of natural history, the laws of thought, the principles of political economy and monetary transactions, agriculture and the production of food and clothing, and the chief processes of manufactures, should have an entrance opened to a knowledge of them in early life. Each of these departments of information, he would be a bold man who would say it could not concern the professor of whatever calling, to be in the position to take up and pursue. We presume to say of one science, astronomy, of all, the grandest, that it is one which even the architect cannot creditably or wisely hold as foreign to him.

Suppose a being endowed with the utmost conceivable human powers of observation, thrown on this earth, what would be the first subject of his contemplation? The heavens. Conceive his powers to comprise the knowledge that it has been permitted to accumulate; and could there be an art, or anything belonging to nature in a single planet, that should mix with his admiration of the universe beyond, unless it be the creation of that mind which has been able to measure the distances and periods of time computed by astronomical science. To have elaborated proofs of the rotundity of the earth, of its magnitude, its rotation on its axis, and its motion round the sun, to have found means of determining longitude and latitude by observations of time and the heavenly bodies, to have accounted for the seasons and climates, and changes of day and night, to have measured every dimension of length or distance from the earth, a moving object, and to be able to predict the recurrence of phenomena, to a second of time: these are some of the achievements of a science which has had one great architect amongst its professors.

There is an eminent member of the Chancery bar, who was once heard to say that he did not know the use of astronomy. Perhaps he did not know of the "Nautical Almanack," the handbook of the seaman, which has to be compiled always some years in advance; or that it is by astronomical observations founded on the truths discovered by astronomers, that, as much as by the compass, voyages out of sight of land are made. But, sad would be the future, and wasteful the use of powers that have been consigned to man, should all research into Nature's laws be abandoned, except that of which the immediate utility could be proved. It might not all at once add to the happiness of humanity, to show that the earth's antiquity is not less than 100,000 years; and the world may have got on very well up to the time at which it was discovered there was a planet distant from the sun upwards of thirty times the 95 millions of miles which the earth is, and requiring 164½ years to complete the circle of its orbit. Science is not in a healthy condition unless pursued for the reward merely of satisfaction in the unfolding of truth, or unless the lesson of humility comes with the contrast between the ever-widening area and the human power that seeks to penetrate the unknown. As discipline for the mind in every sense, there is probably no study which can take higher rank than that of astronomy, founded as it is on precision of observation, and on that geometry which has been called the soul of our own art. The astronomical and architectural pursuits of Wren had, doubtless, a near relationship.

There is, however, one department of astronomy mingling with geography, which is important to the surveyor, and of which, therefore, the knowledge is something more than elegant accomplishment for the architect. This branch of science has been named, probably in Germany, and not quite satisfactorily, mathematical geography. It includes all that is ordinarily taught in schools as the use of globes, and something more, as for instance the different projections of the sphere used in the construction of maps. This entire subject is treated of in a small volume which is now before us.* The work originated in a want noticed by Mr. Laurie, of a compendium in the English tongue, distinct from the matter which might be found interwoven with the details of astronomical science in the works of some writers, as Herschel in his "Astronomy;" where, however, as allowed, the foundation of the subject has been expounded in a full and masterly manner—though chiefly for the use of the advanced student. Other writers, or most of them, says Mr. Laurie, had confined their attention to some department, as that of map-projections, without entering on the subject as a whole. A distinct work, in Germany, Brettner's "Mathematische Geographie," was found; and the first idea seems to have been that of a translation. Mr. Dick, however, who undertook the task, finding deficiencies in Brettner, merely adopted it as a basis for a new work in which he drew assistance from the best sources in English, French, and German. The result is certainly a valuable text-book or work of reference.

The author does not profess to have "popularized" the subject according to the current notion expressed by the term. Mr. Laurie urges, with truth, that though salient points may be presented in a form to save trouble, the reader may fall under the delusion that he knows the facts nearly as well as if he had undergone the trouble; and that the "method of procedure—unfortunately, not seldom adopted—seems to be admirably calculated both to enfeeble the intellectual powers, and also ultimately to destroy in earnest minds every particle of genuine interest in the subject."

Various matters explained are, preliminarily, the chief lines and points in the heavens, and the apparent movements of the sun, moon, and stars, and afterwards the several proofs of the earth's rotundity; the points, circles, and positions, on the celestial sphere, and those on the surface of the earth, with the method of determining the position of a star and the longitude and latitude of a place; the magnitude of the earth, and the mode of measuring an arc on the surface, and that of triangulating; the rotation of the earth on its axis, including the proofs derived from vibrations of a pendulum, and the eastward tendency of falling bodies; the motion of the earth round the sun, and amongst the proofs of it, one derived from the aberration of light, and another from analogy of the movements and phases of Venus; the elliptic form of the earth's orbit, and the laws of Kepler; and the phenomena resulting from the earth's form and motions. Chapters also are devoted to Refraction and Twilight, to the Moon, and to the Heavenly Bodies generally, and to descriptions of the Terrestrial Globe, and of maps and projections.

The numerous diagrams in the pages of the work, with only one or two exceptions, where letters of reference are omitted or misplaced,—as they are far too apt to be in popular scientific works,—are designed so as to be exceedingly serviceable to their object of explanation. Still, and with all the merit which the work has, it can scarcely be

* "A Compendium of Mathematical Geography: for the use of Students and Candidates for Public Examinations;" by A. H. Dick, M.A., Lecturer on Geography, Free Church Normal College, Glasgow; with a preface by J. S. Laurie. pp. xvi. & 238. London: Longman & Co., 1863.

deemed a substitute for the ordinary methods of instruction in the Use of the Globes, and for public lecturing, which so especially adapts itself to the work of instruction in astronomy. The book is one admirably fitted to lie next to such a manual as Keith's on the Use of the Globes; and it almost requires the globes to be at hand, as well as the aptitude in trigonometrical calculations which we would assume every architect to possess, in order that the matter which it contains may be followed and thoroughly understood. Greater prominence of the description of the artificial globe, aided by cuts, might have been given with good effect. But, as this Compendium is, the study of it by the class out of which our own readers are formed, may be richly rewarded.

Geography, according to Mr. Dick, is to be divided into three branches: mathematical, physical, and political. The first would treat "of the shape, size, and motions of the earth in space, and of the different phenomena resulting from these motions;" the second would regard "as its objects all the phenomena connected with the land, the sea, and the atmosphere;" whilst political geography would inquire "into the divisions of the earth's surface among men, and the constitutions, customs, and commercial relations of the states which these divisions form." Mathematical geography, therefore, as already shown, may be considered as a branch of astronomy; and we regard it as the especial merit of the present work, the having given to all who are like our friend the barrister, the opportunity of discovering that the observation of the heavens, and the determination of lines and points therein, are necessary to the understanding and description of the configuration and movements of the earth. The understanding is as necessary to the solution of problems of daily occurrence,—the phenomena of distant objects, and the difference of time by changes of longitude in travelling,—as it is to the surveyor or the navigator.

To determine exactly the position of a place, or object, requires the solution of three problems. These are:—1, to determine the direction of a meridian line, or plane of a great circle, crossed by the sun at noon: 2, to determine how far along that line, the place lies from the equator: 3, to determine how far, measuring along the equator, the meridian lies from the meridian of a certain other place. The meridian of the place may be found exactly with the aid of a telescope, a chronometer, and a sextant. With the sextant we note two moments, one before and the other after noon, when a star or the sun has the same altitude; the chronometer gives the interval of time, half of which is the moment of crossing. We can then determine the moment of crossing for the next day, and arrange a telescope, called a transit-instrument, so that at the instant next day, the star will be in the telescope-axis sweeping perpendicularly in the plane of the meridian. Having found the meridian, the latitude is determined by taking the sun's altitude when passing the meridian, deducing therefrom the zenith distance, finding the sun's declination or distance from the equator, on the day of observation (this is given in the Almanack), and taking for the latitude the sum or difference of these, according as the sun and the place or ship are on the same or different sides of the equator. The determination of the longitude resolves itself into the finding the difference of time between a place on the first meridian as that of Greenwich, and that of the place whose longitude is required, and allowing 15° to every hour, *eastward* if the time at the place be in advance of that at the first meridian, *westward* if it be behind.

To find the length of a degree of latitude in miles, in order to multiply it by 360, and get the circumference of the earth, we may find two places on the same meridian where a star stands one degree further from the zenith at one place than at the other, and measure the distance on the earth. But as the earth is flattened at the poles, the observation must be checked by others. The measurements along the earth can seldom be made, of any length, in one line; so that they have been made sometimes along several meridians, with junctions between the short lengths, at right angles; or the meridian line has been arrived at by triangulating about it from the datum of a short base line carefully measured at any suitable place, the height of the points of the triangles being reduced "to the horizon," and in cases where the sides of the triangles exceed fifteen miles, making a further correction for the sphericity, or rather ellipsoidity, of the earth, of which they partake. The States of the New World have adopted lines of latitude and longitude as their boundaries, rather than the lines of rivers or mountains. Surveyors in those states therefore, must be astronomers.

The understanding of the calendar, and not merely the knowledge of the period of, but of the reasons for, the change from Old to New Style, is not a matter without importance to the reader of the biography of architects, if not to the student of architectural history. Such knowledge may save him from some blunders. But into the explanation of this, and of the phenomena of the tides, and into that of the changes of the moon, we cannot enter more than by saying that there is given in each case explanation that may be valued by many of our readers; albeit in some of the matter amplification might have been usefully made.

The chapter on "Maps and Projections" will be found useful. A plane surface cannot be made truly to represent that of the earth, without foreshortening. Different methods or projections have been devised, to reduce the distortion as much as possible. These are enumerated by our author as five. The five are the orthographic, the stereographic, the globular or equidistant, the conical, and Mercator's projections.

The orthographic is as the name shows, the system of architects' drawings, and therefore is one that in the representation of a hemisphere, is almost useless as regards islands and continents which happen to fall near the edge of the circular space of representation. In plans of very small areas, such as are the chief business of the "surveyor," the distortions are not perceptible.

"In the stereographic projection," in the words of Mr. Dick, "the eye is supposed to be on the surface of one hemisphere, and looking inwards through the transparent globe to see the opposite hemisphere drawn, as it were, on an immense sheet of glass passing through the centre of the earth, just as we see the objects outside of a window apparently drawn upon the panes." In the stereographic projection, as contrasted with the orthographic, every circle or curve other than the meridional, or circle in the plane of the eye, becomes a circle or curve in the projection; and every spherical triangle on the surface, becomes a similar plane triangle. There is distortion, however, in the drawing of a hemisphere thus projected, parts at the circumference being magnified whilst those near the centre are diminished; but it is less than in the orthographic method, where the dimensions in the drawing are regularly lessened as the object is situated nearer and nearer to the circumference. Whether the projection be made on the plane of a meridian or that of the equator, the earth is taken to be a perfect sphere. In a stereographic projection of the sphere on the plane of the horizon of London, the eye is supposed to be placed at the antipodes of London, "and viewing the opposite hemisphere from within, in such a way that London occupies the centre of the field of view." Further explanation of this mode of projection would require to be given at some length, and with the aid of diagrams. Each of the methods ought to be within the knowledge of architects. But we may proceed to explain some of those which have been only named.

As already shown, the stereographic and orthographic projections, alike, do not represent equal spaces on the globe by equal spaces in the projection: the orthographic projection diminishes spaces as they approach the circumference, below their true proportions; the stereographic magnifies them. In the orthographic, as may be said, the eye is at such an infinite distance that the rays of vision are practically parallel; in the stereographic, it is supposed to be exactly on the circumference of the earth. Some station between these two positions of the eye has been sought, so that the projection would represent equal spaces on the globe by equal on the map. The object is *nearly* attained in a projection in which it is supposed that the eye is at a distance beyond the surface of the opposite hemisphere, "equal to the sine of 45 deg. on the circumference" of one of the great circles of the earth. "Such a projection is called the globular. In constructing it, those spaces on the plane which represent equal spaces on the globe are often made *exactly* equal to each other. In this case it is named the equidistant projection." In constructing a map of the eastern or western, or the northern or southern hemisphere, a circle is first turned; and diameters at right angles are drawn. The quadrants are divided each into nine equal parts, each part representing 10 deg. Each radius is also divided into nine equal parts. In the eastern or western hemispherical map, then, three points will be found given for the delineation of the parallels of latitude, the curves being segments of circles of which the centres are all on prolongations of the perpendicular meridional or central line. For the meridians right and left, segments are struck from centres which are on prolongations of the equatorial line, passing through the marked points on the radius, but cutting the circumference at two points, the poles. In the case of the northern, or southern, hemisphere, the parallels are struck as equidistant concentric circles, and the meridians are drawn as radii. The equidistant projection is that commonly employed in the construction of maps of the world. Its defect is that, although equal spaces on the globe are represented by equal spaces, and the proportionate *size* of different countries is preserved, still, lines, as the parallels and meridians which cross at right angles on the sphere, cross at different angles in the projection: therefore *shape* of the countries must be distorted. In the map of the northern or southern hemisphere, that is to say, the projection on the plane of the equator, the dimensions of countries near the equator are exaggerated in longitude.

In another system, the conical projection, a meridional line, as *datum*, is supposed passing tangentially to the sphere from a point above the pole; and, where it would touch, a circle on the sphere described by the revolution of the latter, is taken as the *datum*-parallel. In projecting the map of England, the meridian of 2° west longitude is chosen as a central meridian; and the 53rd parallel of latitude as the central parallel. The revolution of the globe, carrying the tangential line, would describe a hollow cone. If we suppose this opened out, the parallel-circle on the sphere will be represented by an arc of a circle in the developed cone. The parallels above and below, will however be larger on the cone than on the sphere, and the parts about them magnified. The difference however will be trifling when a narrow zone of the sphere is concerned. The middle, or *datum*-meridian is represented by a perpendicular line. To represent the middle parallel, which should pass through the middle of the map, we must find the length of a tangent to the sphere on the middle meridian; and from the centre describe the arc. From the same centre, we describe the arcs of the other parallels, only varying the distances according to the length of a degree; since degrees of latitude, owing to the flatness of the sphere at the poles, vary at different distances from the equator. To represent the meridians of longitude we measure on the parallels, distances which may be obtained from a table of the lengths of degrees of longitude in different latitudes, and trace the meridional arcs through the points so obtained. In this system of development there is but little distortion. What there is will be principally towards the edges of the map. On the globe, the meridians and parallels intersect at right angles. In the projection, the spaces may be regarded as the same as those on the globe; the lines do not cut at right angles, and the space is not a rectangle; but the angles differ but little from the right angle; and the spaces have nearly the same extent in proportion one to another as they have on the surface of the earth. In finding the parallels above and below the central, or *datum* parallel, trigonometrical tables may be employed. An adaptation of the conical method was invented by Delisle for a map of Russia. Here the side of the cone instead of being taken as a tangent, cuts off a small portion of the sphere, or intersects it in two places, each being exactly in the middle between the central and one of the extreme parallels. The errors are thus more distributed.

In Mercator's projection, the surface of the earth is supposed to be represented on that of a hollow cylinder circumscribing the sphere. If the surface of the globe divided into gores by the meridians, be supposed perfectly elastic, and each gore lifted up at the two ends and applied to the inner surface of the cylinder, and thus stretched at every point except the equator, and varyingly with the distance from the equator, we shall have taken one step towards a map on Mercator's system. Evidently thus far, the form of the different parts on the surface of the sphere must be changed. There is one way of preventing the change of form. This is by lengthening the distances between the parallels as they recede from the equator. Such a representation laid open, as if the cylinder were slit up along one of the meridians, constitutes a Mercator's chart. The chart is useless for the study of geography; but it is of great service to the navigator. The shortest distance between two points on the earth, is the arc of a great circle which joins them. But except on a meridian, or on the equator, it is impossible to sail along such an arc without constantly changing the direction of the vessel. The only great circle that makes always the same angle

with the meridians, is the equator; and to keep on any other great circle, the direction of the vessel would require to be constantly changed, or set to cross the meridians (which tend always north and south) at different angles. This is too difficult for most navigators. Some *one direction* is required, cutting the meridians always at the same angle. Such a line is called a rhumb line, or loxodromy; and it is only necessary to rule a straight line, to lay it down, on Mercator's chart. There is indeed some difference between sailing by the loxodromy and sailing on the arc of a great circle; and tables have been published to assist the latter method; but after all, the simpler method of navigation is generally preferred.

In map-drawing, there are different methods of representing relief with accuracy which is not attempted in ordinary maps. In contour-line maps, the differences of elevation are shown by lines, each of which joins parts that have the same level, the coast line being generally, if not always and of course, the lowest; and the lines being farthest apart where the country slopes gradually, and close where the slopes are steep. In shaded maps, lines are drawn from one contour curve to the other, all of the same thickness, and, says the work before us, "invariably separated from each other by one-fourth of the distance of the contours between which they are drawn;" so that the shade is darkest where the ground is steep, and faint where there is but a gentle slope. This method has been adopted in the Government maps of France and the United States. In the Saxon method, which is very generally used in Germany, there are no contour lines; the slopes are expressed by shading lines alone, whilst a level is left without shading. The direction of the lines is always that of the greatest slope. Ground with a slope of 45 degrees is all shade, or black, and for every difference of 5 degrees down to the perfect level, a change is made by the introduction of white. This portion of the work before us, or relating to maps, is one of those portions to which greater development might have been given. The English maps which accurately depict the features of countries and districts are few, very expensive, and not remarkable for accuracy. We should be glad to know of a sufficient account of the methods of representation used in foreign countries, as shown in maps which were in the Exhibition of last year.

As a book to be read in connexion with attendance on lectures, and with the working of problems on the globes, this Compendium which we have used as a text, must be considered as having great value; and as we have shown, it contains matter which is of importance to students of our particular profession.

LIVERPOOL EXCHANGE BUILDINGS COMPETITION.*

"LABOR et Honor" (26).—This design, to which one of the second prizes has been awarded, has a central tower and flanking towers surmounted with truncated domes. It is beyond the ken of man to conceive why this arrangement has been hit upon so often, for it cannot be considered either to possess great beauty in itself, any peculiar suitability to the site, or the slightest claim to utility. Given a form beautiful in itself, and ten to one nineteen out of twenty competitors would treat it in such a manner as to completely conceal that from which it derives its peculiar effect. We consider the arrangement of broken roofs, prominent towers, and consequent tall chimneys, from the verticality of the lines, the composition most fitted to destroy the repose, simple unity, and continuity of the quadrangular form. To judge of this we need but examine the present buildings, which, though really possessing no one beauty of detail or other merit than that of continuity, congruity, and simplicity, do not fail to please most minds. Many of the competitors seem to have forgotten that the Townhall will form one side of the quadrangle, and that the proposed buildings will be in a measure a continuation of Brown's Buildings and the Liverpool and London Chambers, and, consequently, in general outline should harmonize with them. It may be objected that this would tend to monotony, but it need not necessarily be so, for in able hands the details might be made to completely relieve it from that fault. The great merit of "Labor omnia vincit," apart from good drawing, is that it preserves the continuity of the present buildings, and would thoroughly harmonise with them without in the least copying their details or peculiar features.

In justice to the author of "Labor et Honor" we must say that where he fails it is in common with most of the competitors. The drawings are characterised by great mechanical neatness and finish. In the exterior there is, in conjunction with much *correctness*, a want of imagination and warmth, the treatment apparently being to take a window of one pattern and repeat it with little variation all round the building in that story. The plans are beautifully neat in execution. A circular tower occupies the north-west angle. The underwriters' room is situate in South Chapel-street. The corridors are central, lighted by well-holes. A side entrance to the Telegraph Office and Stock Exchange, as provided in many of the plans, would be a convenience not perhaps thought of by the author. The central passage is divided into two archways. The news-room takes the form of a Greek cross, and is surmounted by a central dome supported upon a flat ceiling and *beams* 60 *feet span*. Such an arrangement is both unstructural and inelegant, and we hope the merchants may be preserved from any such deformity. The plan generally is simple and good, excepting in the arrangement of the west wing, which seems hardly to have had the consideration devoted to it which its important character demands.

"Patavi et Computavi" (39).—By way of contrast we may be allowed next to allude to the designs bearing this motto. The whole bear the marks of hurried execution, and the author would have done himself more justice by leaving out the unfinished and roughly-executed exterior perspective. The news-room is in plan of the Greek cross type, but more developed than any of the others. Whether this would prove an advantage or not in point of utility we are not prepared to say; but the interior perspective shows a lofty and noble room, surmounted externally with a dome for ventilation. Though rather heavy-looking, we think this is due more to the *loaded* execution of the perspective than to its general form, but a little more elegant ornamentation would improve it. An absence of ornament and sculpture pervades the exterior, which might have been made much more attractive and effective by their introduction. The lower story is rusticated, and the first and second floors are united under one arcade spanning two window spaces. These arcades might have been treated in a more varied manner, but the author is aware of the value of a continuous horizontal line, as shown in a cornice of massive dimensions carried completely round the building.

"Res non Verba" (13).—This set of drawings is hung in a better place than it is entitled to, while "Au Bon Droit" (with a cross), a most elaborately got up and in many respects excellent design, is placed in the last room, with more than half the drawings face down on the table. The elevation of No. 13 has a poverty-stricken appearance, and the news-room is awkward in shape, while the general offices are arranged in separate blocks, and a number of small courts are studded over the plan. The author states that he has taken Brown's-buildings and the Liverpool and London Chambers as a guide; but, in our opinion, he has fallen very far short of either of those structures, whether we consider the plan or the exterior. The elevation is divided by a pilastered order on the first floor, which is lighted by small circular-headed windows; while the second story contains windows with the common type of pedimented heads, looking in places sadly too widely spaced apart. The central passage is shown two stories high,—an objectionable arrangement. The author recommends himself to favourable notice from the fact of having had very great experience in the arrangement and lighting (?) of offices; and states he is at present engaged in erecting a large block of them in Liverpool,—a piece of information which might with better taste have been left out; and we would recommend all architects who have the reputation of their profession at heart to abstain from such disclosures, which are unfair if intended to influence the committee, and if their design do not support their claim by exhibiting very high merit, is calculated to get them laughed at.

"Au Bon Droit" (with a cross), (38).—The author of this elaborate set of drawings has evidently undertaken them in a thorough and commendable spirit. The central tower with domed roof, surrounded with sculpture, after the manner of the Tuileries, forms the most prominent object in the external elevation. Perhaps a little less sculpture than is shown would have the effect of strengthening the outline, which has rather a ragged effect. Flanking towers have been avoided with good taste, while the elevation of the west wing to Rumford-street is decidedly handsome and effective, especially from the manner in which the portico, surmounting the entrances to the news-room is treated. A square and large tower, with Mansard roof, occupies the north-west angle,—a well-selected feature, judiciously placed. We do not object to Mansard roofs, if used with caution; but the injudicious sprinkling of them all over a design is to be condemned. In the present instance, it is unquestionable that it would be a fine ornament seen in perspective from Chapel-street, and, together with the dome, would relieve the monotony of that narrow street. The news-room is transeptal, with apsidal ends, and would, if it be faithfully represented in the interior view, possess grand proportions and tasteful decoration. The perspectives of the exterior, of which there are several, do not, to our mind, exhibit the design to as great an advantage as the geometrical elevations, the weakest point about the whole composition being again the window dressings. The details have been studied from every point of view, nor has apparently the consideration of any one point been neglected by the author, who deserves all praise for the thoroughness of his studies. A corridor surrounds the news-room on the first-floor, and the plan generally is a good one. The side elevations to Rumford-street, Exchange-street East, and flags, are, to our thinking, the cleverest in point of varied treatment.

"A Townsman" (32), "who hopes that the plans so presented may not be considered the less worthy because they *are* the work of a 'townsman.'"—The news-room, a parallelogram, occupies the whole south end of the west wing, and is lighted by windows from the surrounding streets. A side entrance from Chapel-street is provided, in which the present differs from most of the designs. The underwriters' room faces Rumford-street, but the author has forgotten the door. Two courts occupy the west wing to the north of the news-room, an arrangement objectionable from the offices between having to depend solely on borrowed light. The water-closets and lavatories are all situated in the top story, for which the tenants, we are inclined to think, would not be thankful. The composition, as in all of the French designs, again presents the inevitable flanking towers and central Mansard roofs; but, in this case, so broken as to carry the impress of a French château. The manner in which the perspective is etched in brown does not suit the style adopted being more adapted to the portrayal of a Gothic cottage. The interior perspective is by the same hand, showing a coved ceiling, supported by columns with foliated capitals and bracketed beams. The character of the detail and decoration of the walls, beams, and ceiling, though the Corinthian order is employed, approaches the Elizabethan manner more than that of any style we are acquainted with. To describe the exterior is unnecessary, as it cannot be distinguished by words from the other designs of the same class.

"Bursa" (5).—An elegant and originally designed central tower, and an Italian façade treated in a Gothic manner, possessing both breadth and solidity, combine to render this a pleasing, though not a grandiose design. The archway to central passage is cleverly treated, and avoids that dwarfed appearance so peculiarly destructive of architectural effect. The author can hardly have seen the site, or he would not have shown the dwarf palisading across the flags. The interior of the news-room would have a fine effect, being lighted with windows above a columnar arcade. An avoidance of pretentious effect, and a certain originality of detail convey to our mind a more pleasurable feeling than would a dozen Louis Quatorze picturesque groups of building. Architects forget while applying that and other French styles, the fact of the buildings erected about his reign being on an immense scale, occupying a vast area of ground, and consequently requiring a treatment more as groups than as connected blocks. The pediment under the low truncated roof of wings is an original and not an unsuccessful way of varying the horizontal monotony of a perfectly level crowning member, to see which in all its native ugliness we must refer to the design marked "Experiment." The corridors are central, a court occupies the east wing, and the arrangement of the plan appears generally convenient. The principal defect of the façade is the want of elevation above the attic window.

"Au Bon Droit" (with an anchor) (25).—This design the first prize of 1,000*l.* has been awarded. It contains a news-room, a parallelogram on plan, whose side, with six recesses, face flags, and contains in all 1,450 square yards. The entrance, in common with a good many others is only about 12 feet wide, quite inadequate either in appearance or proportion to the room it leads to. Three open courts give light in the

* See pp. 381, 399, *ante*.

same wing, two being brought down to light the offices and corridors on the ground-floor, the other terminating at the ceiling of the underwriters' room, which, in conjunction with side windows, it is intended to light. In the east wing two similar courts are shown, distinguishing this plan from the majority, which usually show a more concentrated arrangement of lighting area. The Telegraph-office faces Exchange-street East, and the stockbrokers' offices face the flags, the arrangement in this respect being peculiar, while the facilities and advantage afforded by a through passage in this wing are very evident. The author has evidently considered the undertaking in a commercial point of view, which he states in his particulars, and has succeeded in producing a very sensible plan. The underwriters' room is in the south-west angle, with a secretary's room adjoining. Columns divide the passage into Oldhall-street. The room for sales by auction is in the basement of the north-west angle, a good position for it from the levels of the ground falling that way. Some of the interior offices are likely to be dark. The oblique passage into Chapel-street is rather an eyesore. The interior of the news-room strikes us as being low; but the gallery above the retiring-rooms would prove a convenience, and from the arcade treatment internally would be far from unpleasing. Three domes light this room, the ceiling being coved and groined. On the exterior its position is not sufficiently marked, so important a room demanding a more distinctive treatment. There is a want of substance about the back elevation. The principal façade shows an arcaded basement, an order above with wide intercolumniation spaced for two windows, an entablature broken around each three-quarter column, in several instances supporting nothing but an inverted bracket, and the cornicione crowned with large dormers to light the attic.

"Three Circles" (30), presents rather a Belgian appearance, the central tower, lantern, and campanile, being well designed, original, and peculiar. The little domed roofs in the angle are, however, not worthy of admiration, and the exterior is, if anything, too formal. The street communications are well devised, the plan bearing the marks of careful study. The news-room is of the Greek cross type, with staircases for the offices in the angles. The corridors are widened out in places, and are lighted with well-holes. The dome of the reading-room is lighted with side windows, the proportions of the interior elegant, with sufficient length of pendentives to destroy the abrupt change from the square to the circle. It is one of the best proportioned and most elegant of its class.

"Suo Marte" (31).—A meagre design exteriorly, and possessing on plan the peculiarity of a circular underwriters' room, fitted into the shoulders of a transeptal news-room, with apsidal end, the interior of which does not recommend itself from the possession of any peculiar excellence or elegance. The window-dressings are of most common-place description, between panelled and widely-spaced pilasters. Some of the competitors really must have some spite against the good people of Liverpool from the desire they seem to evince to have a hand in ruining a good building.

"Colonnade" (40), as its title implies, has a colonnade along the principal façade in connexion with two entrances from Chapel-street and Tithebarn-street, not however returned in the wings: a sort of compromise between the present arcade and the offices required by the committee. The news-room is a parallelogram of good proportions, with underwriters' room in south-west angle. The drawings display a refined taste, but are two slightly executed to attract public attention in a competition; the author, though a tasteful draughtsman, having evidently not had time to do himself more justice. The elevations are perhaps wanting in marked character; but tasteful conceptions, which require close inspection, pervade the detail. The style may perhaps most fitly be described as French, treated in an Italian manner.

"Delta" (44), has awkwardly-shaped underwriters' room, and the oblique passage into Chapel-street still more objectionable, from the "kink" in it. A very tall campanile forms the central feature. The order employed is two stories high, with circular-headed windows or arcade between.

"Once More" (41).—A motto possessing a very deep meaning, for truly architects are seduced into competition, though previously unfortunate, by the treacherous determination to try "once more," and if still unfortunate to throw up competition for ever; but the ambitious soul requires many reverses before giving up. This is one of the few designs not carried the full height around the block. The main buildings are very high, containing five stories, while the north-west angle of wing is kept down considerably lower, behind which rises the news-room crowned with a pyramidal roof. The plan is arranged in distinct blocks of offices, for which "hoists" would be very necessary. The treatment of the façade is peculiar, having a flat pilaster carried up four stories; but broken by the floor lines and strings, and planted on it a smaller pilaster two stories high. The general appearance is flat, and we cannot congratulate the author on the design of the central circular campanile.

"Experiment" (42).—One that we hope may never be made again. The style adopted is described as "Greek," for which an action for libel might be sustained against the author with every prospect of success. The interior of the news-room, though very low, is, to a certain extent, a redeeming point. The "experiment," we presume, is the arcade, two columns in breadth, planted on the flags, and carried completely round the quadrangle; why returned on the south side, at present open, is not apparent.

"Agenda" (43).—The offices are arranged in distinct blocks. The mistake of supposing the Chapel-street and Tithebarn-street front the principal one, the author is alone in having committed.

"Lux" (36).—No less than fifteen distinct roofs and towers appear in the front elevation in the foreground, middle distance, and background. To describe this design would only be to repeat what we have said of twenty others, so we must remain content with remarking that the central piers supporting the dome of the news-room are very objectionable, from the space they occupy.

"Fiat Lux" (37).—An elaborate set of drawings, designed with one idea in view. The broken entablature of the east wing occupied with glass being a feature which would prove ruinous to the architectural character of any design. The Rumford-street elevation is recessed in the centre over the news-room entrance. The design possesses merit, but not originality.

"Harold" (34).—A combination of a monastery, cathedral, and college. Full of gables, breaks, and traceried windows, utterly unsuited to the purpose for which it has been designed. The news-room, externally and internally, appears like a collegiate chapel. The author complains that his assistant was taken ill three weeks previous to the time allowed for sending in the designs.

"Iota" (33).—A plainer version of "Harold."

"Speravi" (27).—Exterior of one order, three stories high, and old-fashioned Classic treatment.

"Spes et Patientia" (28) contains an irregular news-room, lighted by side windows. The angles, again, are *accentuated*, with Mansard roofs. The lower story has an arcade, evidently suggested by Brown's-buildings, but contains nothing demanding special attention.

"Utile Dulci" (29), would make an excellent block of Manchester warehouses, but is unfitted to the present occasion. Perhaps the most severely and depressingly monotonous of all the designs, the horizontal lines being quite overpowering.

"N.B." (24), contains a news-room, a parallelogram, lying east and west, not sufficiently high, and it is not quite evident from the drawings hung how it is proposed to light it. The elevation consists of lower story, order, and attic, bare in design. The elevation to Tithebarn-street is the best.

"Dandolo" (35).—The news-room is a mere screen of glass, which, however excellent it may be for a market or crystal palace, is unfitted to the present object. The plan is on the central corridor system. The building is crowned with truncated roofs.

In concluding our notice of the designs, we may say, while being animated by a desire to do strict justice to the competitors, who have generally devoted so much valuable time and labour to perfecting their designs, we cannot help acknowledging to a certain degree of disappointment at the result of the competition. We had hoped that so great an opportunity would have brought forward something possessing higher qualities than the premiated designs; the first of which, while being in every way a well-studied and practical plan, perhaps one of the most completely developed of the forty-four, we cannot place in the very first rank, even as a plan; nor do we consider that the greatest accommodation can be attained by the arrangement adopted; while, as an architectural composition, it is manifestly inferior to several of the designs we have mentioned. The plan certainly possesses the merit of combining some of the good points of several; but so many small open courts are, we think, objectionable; and the disposition of the news-room, by which the *main* entrance is in the centre of the flank, will not be conducive to grandeur, nor is it the best place to enter such a room. A vestibule of more spacious dimensions is a *sine qua non;* nor in any is this better managed than in "Labor Omnia vincit," which only requires more study to make it among—if not—the best of the plans. To see the necessity of greater accommodation for ingress and egress than is provided for in "Au Bon Droit" (with an anchor), we have only to point to the present, which, providing equal accommodation for a room not half the size, is still insufficient.

Respecting the cost of the several plans, we think that this point has been magnified into a bugbear. With an equal area of ground covered, an equal surface of walling, as there must necessarily be where the height and number of the stories have been fixed, barring the towers, there could not be such a difference in the cost but what might be surmounted by judicious modification.

Our notice has already extended beyond our limits; so with this we must conclude.

ON BUILDING MATERIALS AND THEIR ADAPTATION.

IN Mr. A. Allom's paper on this subject, read at the Architectural Association, as mentioned in our last, he observed that the diffuse nature of the subject rendered a satisfactory arrangement of a paper bearing upon it one of considerable difficulty. It seemed to him, from an examination of the remains of ancient buildings, that the practice of the arts of construction in early times must have been better understood than was generally supposed. The earliest records of works of construction were contained in the Holy Scriptures; and it was evident that the people who could construct such temples as those in Syria and Asia Minor must have had considerable knowledge of the art of building. Were it otherwise, such traces of the manners and customs of the ancients would not have remained to us. History showed that even in the earliest times, the builder was not restricted in the variety or quality of his materials, as there was Scripture authority for the fact that the country was full of goodly cities, and the houses full of all good things. The tomb of Rachel, which was 3,590 years old, might still be seen; and it was evident that the masons had not used cement in its construction. This absence of cement no doubt accounted for the utter extinction of form and shape in the remains of ancient buildings to be found in Palestine. The *débris* of those buildings might still be seen in the shape of immense stones, weighing many tons, which were scattered about in all directions, and utilized by the semi-barbarians who now inhabited the districts in which they were found. The walls of Jerusalem were built without cement: the joints were fairly worked; and a portion of the structure was what is now termed "rusticated." The stones were fitted close to each other, and clamped with lead or iron, as in the present day. The enormous magnitude of the works of the ancients showed the progress of civilization; but it also proved the existence of bondsmen, or of forced labour for the benefit of the great and wealthy. The remnants of monolithic erections in various parts of the East were, he thought, an evidence of a barbarous state of society, as they were neither the result of science nor art, but rather the attempts of human pride to construct enduring monuments of their own power; with what result, their shattered ruins and confused history mournfully testified. Referring to a period within the memory of living men, the reader commented upon the wonderful progress of mechanical art during the last half-century. Steam, as a motive power, had revolutionized the arts of construction; had increased the supply of building materials; had facilitated the mechanical process of labour; had cheapened all manufactured articles, and had extended advantages which formerly were attainable only by the rich to the poor: it had, in fact, transformed the pigmy into a giant. Referring next to foundations, and the importance of exercising the utmost care in respect to them, Mr. Allom referred to the concrete bridges in France, and also the bridge at Maidenhead. At the Kingston waterworks, he stated, the river-wall had failed in consequence of the alternate action of the rise and fall of the water. Cast-iron caissons and hollow cisterns filled with concrete, which might be termed monolithic columns, had now taken the place of heavy pieces of masonry. The new Hungerford Railway Bridge was a fine specimen of the

new system of bridge-building; but he suggested, with all due deference to the engineers, that the cylindrical columns might be much improved in appearance by having coloured or gilded lines introduced above the water-line. The use of similar columns, placed at equal distances, might be brought into requisition for the embankment of the Thames; and by that means the many places of business requiring water-carriage might be retained. Having called attention to new inventions with regard to foundations and the modes of avoiding damp, the reader next alluded to the present system of bringing stone to London in the block, and afterwards breaking it up and dressing it. Stone-bricks might, he thought, be made out of the *débris* of those stones, and at a price not exceeding that of ordinary bricks. Brickmaking was formerly more of a trade than an art, but great improvements had been made in it of late years, and bricks might now be obtained of any colour from pale straw to black. The use and abuse of coloured bricks was in itself a suggestive subject; and it seemed to him that the modern attempt to introduce a Victorian style in bricks showed neither a true knowledge of the use of the material nor a taste for art. Its application too often resulted in mere surface patterns, which, from their hideous form and inharmonious colouring, produced the most unpleasant effects. The introduction of iron as a staple of building material had to a great extent superseded the heavier portions of carpenter's work. Iron girders were now in general use instead of balks of timber; and, as far as bridge-building was concerned, there was no doubt that iron would in future take the place of all other materials. Having given some instances of the continued and successful application of stucco in private and public buildings, a medium which he said was daily gaining in favour, he called attention to a new material for temporary roofs, invented by Rigg & Co., which was composed of canvas covered with a water-proofing substance without vegetable oil as a basis; and, consequently, not liable to the desiccating action of the sun; so injurious to other descriptions of temporary coverings.

In conclusion, he stated that the practical and theoretical branches of the subject were so intimately connected that one was almost useless without the other. A student who merely devoted himself to the theoretical study of his profession would be entirely at the mercy of the builder and mechanic for the realization of his conceptions; and although he might have succeeded hitherto in deceiving his employers as to his practical acquirements; yet the time was coming when, thanks to the public examinations of architects lately inaugurated by the Institute, such a practitioner would soon be found out and cast into the shade.

But as regarded the practice and development of architecture as a fine art, he looked with dismay at the superior chances enjoyed by those who had solely devoted themselves to the study of the practical part of their profession: such a candidate for examination would, he feared, pass muster when the man of real artistic genius would go to the wall. The mere acquirement of the A B C of practical knowledge did not require an unusual amount of mental acumen, whilst the principles and practice of true art were studies that require a superior intellect, were a greater task, and would last a man his lifetime, and such as very, very few, if any, completely master. Unfortunately, the centralizing tendency of modern society was apt to unduly magnify the importance of a name; and thus we saw a few of our leading architects with such a constant accession of new works that it was physically impossible that they could individually devote that study and personal superintendence to their realization that the development of art required, or the interests of the public demanded. But fortunately for the younger men the demand for architecture on the part of the public was increasing so rapidly that it afforded occupation to many whose names had scarcely appeared at the surface, but who, no doubt, would eventually become well known and respected in their profession. He had always thought that to the Architectural Association was due a great share of the creditable advancement that had been made in the profession during the last fifteen years. It had been a school of art when there was no other, and how it had succeeded its rising members and talented students testified. It now only remained for them so to combine the practical with the theoretical that men of education and taste would honour them for their artistic abilities at the time that they felt implicit confidence in their knowledge of building materials and their application.

UNCOVERING THE MEMORIAL OF THE EXHIBITION OF 1851.

ON Tuesday, the Queen visited the Horticultural Society's Gardens, to inspect the Memorial of the 1851 Exhibition, a view of which we gave in our last, and was received by officers of the Society, the Memorial Executive Committee, and the sculptor, Mr. Durham. Her Majesty expressed, in unmistakable terms, her admiration of the monument.

On Wednesday, it was formally uncovered in the presence of the Prince and Princess of Wales, and the other members of the Royal Family; all the great officers of state, the foreign ambassadors, presidents of scientific and artistic societies, and fifteen or sixteen thousand other persons being present. The daily papers have fully described the proceedings. We supplement our notice of last week, with the address of the Memorial Executive Committee, which was read by a member of that body:—

May it please your Royal Highness,—In the year 1853 a meeting, convened by the Lord Mayor of London, Thomas Challis, Esq., M.P., and presided over by him, was held in the Mansion House, to consider the propriety of erecting some Memorial of the Great Exhibition of 1851, in connexion with a tribute of admiration to its great Founder, the Prince Consort, your Royal Highness's illustrious and lamented father. The propriety of the step was at once recognized; and it was resolved unanimously, as well by the country at large as by the meeting, that the Exhibition "was an event of the greatest importance to the nations of the world, by enabling them to observe the relative influence of science, art, and national characteristics upon production, by furnishing the means of a valuable review of the past, and by marking a new starting-point for the future progress of productive industry and giving it an increased stimulus." The meeting saw, too, with the wise author of the undertaking, that its tendency had been to promote useful intercourse between all peoples, and to induce in them feelings of goodwill towards each other. Money was accordingly subscribed for the erection of a Memorial, and active steps were taken to obtain a place for the intended Monument on the site of the Exhibition in Hyde Park. Artists of all countries were invited to submit drawings and models in competition; and ultimately, out of nearly fifty, the design sent in by Mr. Joseph Durham was selected.

The endeavours to procure a site in the park having failed, we, the Executive Committee, who had met with difficulties that might not have been anticipated, sought the aid of the Prince Consort. This was at once freely accorded on the condition, characteristic of His Royal Highness's noble self denial, that the Memorial should be in no way personal, but one to which he could himself subscribe. The Royal Horticultural Society granted the fine site before which we now stand, on land belonging to the Royal Commissioners for the Great Exhibition, and therefore appropriate, the Commissioners themselves concurring in the grant; and from that time till the very last, His Royal Highness continued to give consideration and personal assistance of inestimable value in completing and carrying out the project. Guided by his cultivated judgment, and aided by an increase of the funds, the design was enlarged and improved to its present form; and the last public act of the Prince in London was the approval of the statue of Her Most Gracious Majesty the Queen, then intended to surmount the Memorial.

A letter from your Royal Highness, after the painful event that had plunged the nation into grief, conveying the will of the Queen that instead of her Majesty's statue that of her beloved husband should crown the Memorial, and offering on your Royal Highness's own part to present the statue proposed to be thus placed—a letter which touched the heart of the country—enabled us to carry out the original desire of the subscribers, which was, emphatically, to offer a public and lasting tribute in connexion with the Great Exhibition of 1851 to the good Prince—"to whose far-seeing and comprehensive philanthropy" (as now recorded on the face of the Memorial) "its first conception was due, and to whose clear judgment and untiring exertions in directing its execution the world is indebted for its unprecedented success."

We take the liberty of expressing our great satisfaction with the admirable manner in which Mr. Durham has executed the commission confided to him. He has produced a work that we believe to be honourable alike to himself and to the country; and we trust this feeling will be generally shared in, especially by those eminent persons who assisted in the Great Exhibition, and whose names he has consequently recorded on enduring granite.

In concluding this brief account of our proceedings, we tender most grateful thanks to the Queen for the interest her Majesty has been pleased to show in the progress of this work, and the all-important assistance thus rendered us in our self-imposed labour. And we pray heartily and devoutly that Almighty God may, in His goodness, long preserve her Majesty's life—a life most precious to her loyal and loving people.

It only remains for us to acknowledge most respectfully the anxious readiness with which you, Sir, accompanied by the illustrious Princess whom all the kingdom welcomes with open heart, and by your Royal Brothers and Sisters, have graciously taken part in the proceedings of to-day. We offer in the name of the subscribers our earnest thanks, and we solicit that your Royal Highness will now be pleased to command the uncovering of the Memorial."

The Prince read clearly this reply:—

"I have listened with an interest which I am sure will be shared by all present to the details which you have given in connexion with the Memorial to my lamented and revered father, and which we are assembled this day to inaugurate.

As a son, I cannot but be deeply affected by that part of your address in which you have referred to the beloved parent whose aid and counsel were never wanting where work was to be done, or where difficulties were to be overcome. I am confident that our proceedings in commemorating so proud a year in England's annals would have met with his approval; and I am sustained in the part which, in obedience to the Queen's commands, I have undertaken, by a conviction and grateful sense that the sympathy of the entire nation accompanies me.

I have now the pleasure of directing that this Memorial, of which the artist may well be proud, be uncovered."

The whole of the proceedings passed off satisfactorily. The effect of the crowded gardens, as seen from the balcony in which the addresses were read, was charming.

We desire to add to the particulars given in our last, that in the architectural portion of the Memorial Professor Smirke, R.A., co-operated with the sculptor, to the great advantage of the monument.

GUILDHALL ON THE 8TH OF JUNE.

IN the regretted absence of Mr. Bunning, the City architect, through ill-health, the corporation placed the decoration of the Guildhall and surrounding apartments, to fit them for the ball given in honour of the Prince and Princess of Wales, in the well-tried hands of Mr. Crace, who set himself to bring out by means of colour and gilding the main architectural features of the structure, and succeeded in producing a very effective and striking interior. We offer him our congratulations on the result.

The panels of the tracery which form the ornamentation of the walls are filled with decorative work, introducing the arms of the Lord Mayors of the City of London from the time of Fitz Alwyn, in the year 1190, upwards. The columns are brought into prominence by diapered work in gold and colour; and from them spring temporary arched principals of canvas and plaster; which, however, does not prevent the roof from being the least satisfactory portion of the whole. Round the top cornice are ranged banners of the various livery companies, the Royal arms, and arms of various cities in the kingdom, so as to carry up the colouring of the walls below towards the roof. At the eastern end of the hall is a raised daïs, upon which is a cloth of estate, bearing the arms of the Prince and Princess, with their united initials, and the badge of England, Scotland, and Ireland. On the tracery of the walls at this end are placed the arms of the sovereigns of England, as well as the arms of foreign sovereigns who have partaken of the hospitality of the city of London. At the western end of the hall is erected the orchestra; the front formed with looking-glasses, with drapery, and with suits of armour, and plants ranged in front of the glasses.

We may state, with regard to the principals, that these were manufactured by Messrs. Jackson, of Rathbone-place, from the designs of Mr. Crace, and executed in a fortnight. The reception-hall, which fills the space of Guildhall-yard, consists of two floors; that above being laid as a supper-room; the whole having been erected from the designs of Mr. Allen, the principal assistant in the City architect's office. The decorations of this room included the series of tapestries belonging to Mr. Attenbury, mentioned by us some time since.

The gold casket to contain the freedom of the City, presented to the Prince on the occasion, was manufactured by Mr. J. W. Benson, and seemed to be, from the distance at which we saw it, a work of great merit. It is decorated with blue enamel, and the ornaments are of Cinque-cento character. The outline and general effect are good.

THE DUBLIN EXHIBITION PALACE AND WINTER GARDEN.

THE foundation-stone of the Dublin Exhibition Palace, of which we published a view and plan some short time since, was to be laid by the Lord Lieutenant of Ireland on the 12th instant; and although the contracts for the works are not yet finally decided upon, the excavations for the foundations are being proceeded with vigorously.

The tender of Messrs. Beardwood & Son, of Dublin, in conjunction with Messrs. Rankin, of Liverpool, has been accepted.

The architect, it will be remembered, is Mr. Alfred Jones.

The company's surveyor, Mr. H. S. Snell, gives us the following statistics, which will enable our readers to judge of the extent of the works:—

The total weight of iron used will be upwards of 1,100 tons; consisting of 950 tons of cast iron, 150 tons of wrought iron, and about 20 tons of bolts, washers, screws, and other small parts. The total number of pieces in the above ironwork is nearly 46,000; viz., 9,700 castings, 9,200 pieces of wrought iron, 22,000 bolts, and 5,000 screws. The glass in the sides and roofs would cover an area of 2¼ acres, and the flooring area is 3½ acres.

The accepted tender for the concert-halls, complete, is stated to be a fraction over 2d. per foot cube.

BUILDERS' BENEVOLENT INSTITUTION.

A GENERAL MEETING of the subscribers to the above charitable institution was held at the London Tavern on the 28th ult., for the purpose of electing three pensioners. Mr. Henry Lee, president, occupied the chair.

Among the gentlemen present were Mr. G. Plucknett, treasurer; Messrs. Joseph Bird, W. Hutcheons, R. Watts, sen., W. Phillips, Richard and Geo. Head, R. Richardson, W. Nicholson, T. Cozens, J. Thorn, T. Stirling, J. Williams, W. Harrap, W. C. Anderson, G. Burge, G. Dines, G. Spencer Smith, &c. On the election of the three candidates on this occasion, there is a total number of forty-five pensioners on the funds.

At the close of the poll Mr. Thorn, one of the scrutineers, read over the list, when it was found the following were the successful candidates:—

Thomas Hammond, aged 81; William Taylor, of Southampton, aged 76; Mary Ann Chirnside, of Cleveland-street, Fitzroy-square, aged 68, widow of Henry Chirnside, late pensioner on the funds of the Institution.

The Chairman, in announcing the return of the successful candidates, said he regretted that, out of a list of ten, who were all equally deserving, their funds only permitted them to elect three; and that nothing would have given him greater pleasure than for all to have been returned. He, however, would inform those who had that day met with disappointment, that there would be another election in November next, when some of the number would be returned. He concluded by urging the recommendation of the charitable principles of the Institution on their friends and wealthy members of the trade.

Mr. Plucknett moved a vote of thanks to the chairman for his presence and conduct in the chair. He said that, during that gentleman's presidency, through his personal interest, the funds had exceeded those of any previous year.

Mr. J. Bird having seconded the proposition, it was unanimously carried.

Complimentary votes were then passed to the scrutineers, Messrs. Thorn, Cozens, Stirling, and other officers.

JAPANESE ORNAMENT.*

IN this, our third article upon Japanese ornament, we purpose considering speaking or symbolic forms, and accounting for those peculiarities of the style which result from known causes.

Ornamental styles have arisen which have had no further object than that of pleasing. Others have concerned themselves especially with appealing to the faith or wants of the persons addressed by it. There are symbolic styles of ornament, and styles which are wholly æsthetic in character.

Greek ornament, for instance, was made up of forms created and arranged only with the hope of their beauty delighting those who beheld them. Mediæval ornament consisted largely of forms of a speaking character. The trefoil was not merely employed in this latter style on account of its graceful contour, but as an emblem of the Holy Trinity. Cruciform ornaments were not made because they were peculiarly pleasing, but as symbols of the cross of Christ and of the crucifixion. Even flowers were used as ornaments, because holy persons fancied they set forth Christian actions. Thus Mediæval art, being symbolic, addressed the understanding, and Greek ornament, being æsthetic, addressed the taste. Japanese ornament is in part symbolic, and in part of an æsthetic character. Certain forms are intended merely to please by their beauty, while others are to become cherished on account of their significance. The sacred bean (*Nelumbium speciosum*), is a symbolic element of Japanese and Chinese ornament; but what it signifies we have not fully discovered.

Some light is thrown upon it by a series of objects shown by Remi Schmit & Co., in the late International Exhibition. These were seven in number, and appeared at first sight to have no purpose,—they appeared as so many mere ornaments. This, however, was not the case. Their number would of itself indicate that they had a use, and this their structure tends to confirm. The chief member of each was the sacred bean. This flower was wrought in relief, and was enamelled in the manner of the Claissonné vases. In treatment it was simple and natural, yet the most perfect form of the lily was chosen for the flower, and all deformities were carefully disregarded. The lily was about 3 inches in diameter, and the entire object about 10 inches in height. The flower rested on a brass stalk about 5 inches in length. This rose from a basal mass, on which were wrought waves indicating the water from which the flower naturally springs. At each side of the stalk of the flower, and resting on the base, are ornamental members; but these do not appear important in the composition. Throughout the parts already described these objects were all very similar, but each differed. On the centre of the lily flower rested, in one case, the anthemion ornament, of which we spoke in our first paper, in one of its richest varieties; on another rested a curious fret; on another a canopy fringed by curtains; and in no two was this terminal ornament alike.

A cup formed of a portion of a human skull, massively set in gold (the skull was said to be that of Confucius), was, perhaps, the object of chief attraction in the Chinese Court of the late Exhibition. Upon the gold margin of this cup the same ornaments occur that rise from the lilies of which we have been speaking. The cup has been said to be sacred. The presence of these forms upon it would tend to confirm this opinion, as the lily ornaments are associated with religious rights. There are seven lilies, one for each day of the week. Each seems to speak of a religious duty to be performed. It is much like telling of the sun's day, the moon's day, Tuisco's or Mars's day, and of the claims of each day of the week. These objects are associated with religion. It is in religion that symbolism always has its rise.

The sacred bean is much used in the ornamental compositions of the Japanese and Chinese; but it is a speaking form. Wherever it occurs it speaks. It is to the Japanese and Chinese as fully a speaking form as the trefoil ever was to us, even though St. Patrick taught the doctrine of the Trinity by it.

In Japanese ornament there are many symbolic forms, and many compositions which express the faith of the people. We constantly find the dragon in Japanese and Chinese ornament, either grasping a ball in a paw, or seizing at or disgorging a sphere. Such compositions present to us an eclipse or a lightning storm, as understood by the nations who produce them. Lightning issues from a thunder-bolt when crushed by the fierce grasp of a dragon. An eclipse takes place when a dragon swallows the sun; and the luminary again shines when disgorged. This is the faith of the Chinese and Japanese. Every dragon which we see squeezing the thunderbolt, or in contest with the sun, is an expression of the faith of its producers. While speaking of subjects expressed in forms of a more or less ornamental character, we may notice what such expression involves.

In order to the representation of the thunderstorm there must be a dragon, and a ball, and lightning flashes; and with these clouds are usually associated. The ball would easily be rendered, and the production of lightning flashes would involve the expenditure of no great skill. Clouds, however, are difficult to treat, and artpower of the highest order may find scope for its exercise in the production of a spirited dragon. Lightning is generally represented by both the Chinese and Japanese, as irregularly-waved elongated bifurcated members, with attenuated points. Clouds are variously treated, and much skill is manifested by some of their conventional forms. They are usually bounded by curves terminating at their ends in small volutes, and are of irregular forms (fig. 1). In Japan they frequently occur in the Mediæval cusped shape also (fig. 2); indeed, the coincidence between the clouds of the two ages is so complete, that it would be in some cases impossible to discover, from the form merely, in which they originated. Fig. 3 shows the moon borne upon clouds.

Clouds are skilfully treated and beautifully rendered in Japanese art. In the production of a dragon there is much room for the exercise of fancy. A fabulous creature may have any form. Usually the dragon is represented as a kind of reptile, a species of lizard or alligator. None but a believer in dragons could draw these ideal beasts with the power and energy with which we often see them portrayed in the works of China and Japan. The fierceness of the monster, who in his wrath squeezeth forth the lightning, must be felt to be set forth with power. As given by either nation it is always full of life. And usually there is as much ferocity or even agony given in the form as there is life. No nation ever has had the power of producing monsters so full of energy and life as the dragons of Japan and China. The delineation of these subjects demands a conventional treatment of clouds, lightning, and the dragon, in the production of which the art of which we write is peculiarly successful. There are many speaking forms employed in Japanese ornament, but there is great difficulty in discovering precisely what they express. Contradictory statements are made respecting their utterance: hence we content ourselves with the illustrations of symbolism which we have already given. Japanese art is in part symbolic and in part æsthetic.

The student of Japanese art cannot fail to observe small ornamental devices on many objects. Small circular compositions, squares formed into groups, and solitary rosettes, occur on many of the best lacquered articles. And these frequently appear as independent ornaments amidst the branches of a plant, or dispersed between the parts of loose and continuous scrollwork. Considered in an ornamental point of view, these often give to the ornament a fragmentary character. Their nature, however, explains their object. They are crests.

Japanese crests are usually more simple than our own. They often consist of a familiar object, as a fan, but more frequently of some ornamental device. One before us, as we write, consists of four wedge-shaped leaves, with three-lobed points radiating from a centre (fig. 4); another of a circle, in which is contained a flower formed of three bilobate petals (fig. 5); another of four small squares with boundary lines broader than the space they enclose—the four squares being arranged into one larger square; another is a fan, the web of which is a mere broad band of the form of an arc: no corrugations or plats are indicated on it; another consists of a trefoil leaf with serrated margins, similar to that of the common strawberry-plant, and three small heads of flowers. The three points of the leaf are directed downwards, and the heads of flower rise from behind. The flower heads are not those of the strawberry plant. Another is a dragon coiled, as though in great agony, into a circle. Another is shown in fig. 6. These are crests which we have met with on many articles—on wall-papers, boxes, mirror-stands, metallic mirrors, writing-cases, and other objects to which art is applied. Many of the small and disconnected objects on Japanese articles are crests, and the purpose of those which are not may yet be understood.

Circular compositions have great favour with the Japanese. We observed an earthen bowl in the late Exhibition decorated entirely with circular arrangements of flowers. A friend copied about fifteen of these groups, and these were not all. No two were alike. On many saucers, cups, and other articles of Chinaware there were two or three of these circular arrangements. A tray was decorated with three such ornaments, one of which is given in fig. 7. About half the Japanese wall-paper which we have seen have circular patterns upon them (fig. 8). Circular compositions are more common with the Japanese than groups of any other form. This seems to be accounted for by most crests being circular. A loyal subject may possibly use upon his walls the crest of the prince whom he serves; but of this we cannot speak with certainty. The poor in all countries seem to imitate what the more wealthy do. Crinoline is no sooner worn by the rich than the poor also procure it, or a cheap substitute for it. If ladies of the first rank wear dresses decorated with stripes, women of the lower ranks will wear stripes also. It has been rightly said, that whether monkeys are degraded men or not, this is certain—that men are inveterate apes. The lower always ape the higher.

This tendency of the human mind to imitate would account for the prevalence of circular ornaments in Japan. If the upper classes of society have their articles studded over with circular crests, the lower grades will either copy the forms used by the higher, or produce similar ornaments. They will cover their articles with circular flower groups, or arrangements of animals, or conventional forms. Circular ornaments they will have for the upper classes have them. As the upper classes place these crests upon articles of common domestic use, and upon their walls, we find the circular ornaments of the lower classes upon all kinds of objects.

This seems to us a probable explanation of the frequent occurrence of these circular ornaments, but it may not be correct. It is only surmise on our part, and may consequently be very far from truth. The Japanese may have a strong partiality for groups of this character, and these groups may have no further object than that of gratifying the taste. The crests, however, are generally circular.

What we have said is sufficient to guide us in forming a tolerably correct idea of the nature of Japanese ornament, and a reasonable opinion of works in the Japanese style. By a correct knowledge of art, we can say whether works

JAPANESE ORNAMENTATION.

in the style offered to our notice are true, or whether they falsely represent the style they set forth. The use of ornament which belongs to another age is never desirable; and the use of ornament belonging to a people of foreign faith should never be adopted. That mode of expression by words which had currency even in the court five hundred years back, would now be considered low and inelegant by people of the middle classes of society. We have advanced during the last five hundred years, in our language at least. We should have correspondingly progressed in our arts, but we have not. Yet the art of the Middle Ages is not appropriate to us. It might be modified, it may be, to answer our present purpose, as the language has been. So might the ornament of other nations; but as they stand, no style of ornament which has expressed the faith, or satisfied the requirements, of people with a different faith and dissimilar wants to our own, is appropriate to us.

Rather than copy ornamental forms, we should extract the good from all styles, and appropriate it to our purposes. We should borrow principles rather than forms. The sacred bean does not address our understanding: it is no more to us than any other flower: hence for us to use Japanese ornament, as it stands, would not be desirable. But if we use it we should employ its noblest qualities, and select from it those forms which are of an æsthetic rather than a symbolic character. We certainly should, in all cases, avoid the mean features of a style, and employ those only which are exalted. These considerations of Japanese ornament will aid us in selecting the true art qualities from the Japanese,

FIG. 4.

FIG. 5.

if we must follow the fashions of the French, and produce designs in the style of a worthy character. While we cannot approve of copying the ornaments of any style, we yet think that more real art is to be found in Japan than in many countries whose ornament we largely use; hence, if we cannot produce original decorations, and must copy others, we may, with advantage, study and appropriate Japanese ornaments.

STREET ARCHITECTURE, LEEDS.

AUCTION ROOMS, EAST PARADE.

THE building of which we give a view is in the course of erection for Messrs. Hepper & Sons, close to the Town Hall and near the railway station, under the direction of Mr. George Corson, architect. The basement comprises dining-room and porters' room, under the offices; furniture store-room, under the auction-room; and covered yard, with access from Park Cross-street. There are no rooms over the yard or the auction-room; over the offices there is one large room for estate sales.

The front is entirely of stone, from Harehills quarries; the wall-stones are boasted; the dressings rubbed, with bands of red sandstone to arches and under the gables. The shafts to the porch and ground-floor windows are of polished red granite; those to the windows of the estate-room and stairs are of serpentine.

The porch, which is semi-circular on plan, will remain open during the day, and be closed at night by shutters folding and sliding into recesses on each side.

ARCHITECTURE OF THE PROVINCES: AUCTION ROOMS, LEEDS.—MR. GEORGE CORSON, ARCHITECT.

ON THE ART COLLECTIONS AT SOUTH KENSINGTON, CONSIDERED IN REFERENCE TO ARCHITECTURE.*

I FEEL that I am yet only on the threshold of my subject. I had intended to have taken a chronological method as the most convenient; that is, going from century to century, to pass rapidly in review the different classes and modes of art to which each age and country gave rise, at least as they are illustrated by actual monuments in the Museum; but it is obvious we have only time for a few disconnected examples. Now the Museum is very rich in Byzantine or Romanesque art, in my opinion a most original and interesting phase,—one, moreover to be studied rather in decorative utensils and objects of a portable nature, than in great buildings, which, in the lapse of so many centuries, have nearly all perished or lost their original character. The first great awakening of art in Europe took place in Germany, under the successors of Charlemagne; and the second Otho, by his family connexion with the Byzantine court, introduced all manner of skilled craftsmen from the East, whose varied and ingenious technical processes took root and speedily bore more excellent fruit than in the East itself. Western Europe was then preparing to take that great stride onwards, which speedily led it to dominate over the East alike in arts and arms. The great old city of Cologne was, as I believe, thenceforth, perhaps for at least two centuries, the prime centre of art in Europe: thence proceeded those noble works in metal, such as the seven-branched candelabra, the so-called trees of Milan, Brunswick, Essen in Westphalia, Hildersheim, Prague, and I fear I must class our own Gloucester candlestick as a work of this school, though I would fain believe it to be of English origin. I know, for instance, nothing of any age superior either in design or technical execution to that stupenduous work, the "Albero" of Milan Cathedral, a production unquestionably of German art. Now, here under my hand are several objects of great interest of this period.

The beautiful Champlevé enamels we have already alluded to are of prior origin, and of much higher merit than the better known and more abundant ones of Limoges. Our Museum affords numerous examples of both. Then, again, what a mine of varied instruction is presented by the numerous monuments in carved ivory—the croziers, book-cover plaques, diptychs, the mosaics, nielli, and book illuminations of this fertile period. In all these branches the Museum affords characteristic specimens.

At this early time, moreover, textile art had arrived at singular perfection, and I cannot but allude to an important collection of specimens in this class, which the Museum has recently acquired,—I mean the extraordinary gathering of ancient fabrics, and articles of costume formed by that distinguished archæologist, Dr. Franz Bock, canon of Aix-la-Chapelle. I am happy to announce that the Museum has acquired upwards of one hundred specimens from that collection; and I trust the remainder of the series, making in all about 450 pieces, will ultimately be secured. I have hung around some few examples, but by no means the most important, for the bulk of the specimens are not yet ready for exhibition.

Now, this collection alone is a treasure of flat ornamentation of the most admirable and diversified kind. From the sixth or seventh century downwards, there is a complete series of the most exquisitely beautiful textile fabrics ever produced,—chiefly the splendid tissues of Byzantium, the costliest products of the looms of Cologne, of Bruges, Venice, and Palermo. This collection in its entirety is, and will, doubtless, ever remain unique and unapproached in importance. Not a few of the specimens, for instance, have been the shrouds and rich pontificals of ancient ecclesiastics rescued from the tomb; others the envelopes of relics; many, indeed, relics themselves, having been the known vestments of sainted ecclesiastics, preserved from generation to generation in their own churches and monasteries.

Now our English Mediævalists are beginning to take note of textile art as within their province. Here, then, is a boon to them; but I need scarcely say that, for all art in which colour and geometrical or flat ornament is concerned, for wall-diapers, painted glass, &c., the truly beautiful stuffs of the Middle Ages, dwarfing into insignificance as they certainly do, all our modern products, are an indispensable source of study.

We now come to that great era of art which I may, perhaps, for want of a better title, still be allowed to call the Gothic system or style. I do not employ the term "*Christian Art*" simply on account of its too great comprehensiveness; though it is here, in a certain sense, very properly applied, inasmuch as we have now a new and perfectly original art-system, in which Pagan antiquity had absolutely no share, and to which it was radically and essentially antagonistic. I shall not occupy your time with æsthetical or historical speculations as to the origin of this Gothic architecture. It was the spontaneous and genuine expression of a peculiar state of society in Western Europe. Chivalry, the feudal system, and the ardent unquestioning faith, stimulated by romantic mysticism, of the Roman Catholic Church, produced, in fact, in the thirteenth and fourteenth centuries, an art so wonderfully complete and original, so rich and varied, and yet so inflexible in its leading principles and forms, that it seems impossible either to take from or add to it. It seems to me, indeed, that the greatest tribute we can pay to this system is to avow that we must be content with a humble and loving imitation of it, or its entire abandonment.

The Museum is very rich in works of this great phase of art. We may commonly class works of the Mediæval Gothic period under two heads, namely,—Ecclesiastical, and Secular or Domestic. Generally speaking, from obvious causes, objects in the latter class are the more rare. There are, nevertheless, to be found many most interesting and suggestive works of Domestic origin. I may specify the numerous and diversified series of coffrets or caskets in every possible decorative material, iron, brass, wood, ivory, leather, &c., carved, painted, embossed, chiselled: every variety of manipulation with the hammer and file, the graving-tool, or the gouge, may be here seen; each instrument fashioning its appropriate material into forms of beauty; differing as widely as possible in their decorative expression or styles one from another; modified again by the different modes of view of the respective nations of Mediæval Europe. Here we may note French Gothic, differing with an infinity of shades of variation from the neighbouring Flemish and German contemporary versions;—England, again, displaying its own beautiful peculiarities; and Italy and Spain, southern lands where the Gothic never fairly struck root, nevertheless offering us occasionally motives of admirable originality and beauty. Then let us take into consideration the goldsmiths' or metal-workers' craft. Here are splendid altar-crosses, reliquaries, monstrances, chalices, &c., in rich array; drinking-cups, salt-cellars, mazer-bowls; and in the more robust art of the blacksmith,—what an admirable series of locks, handles, hinges, knockers, coffers, &c., does this collection offer for the direct practical study of the architect and designer for industrial art! How completely in this phase of art, for instance, may we study the natural and consistent, and, therefore, most artistic treatment of wrought as opposed to cast metal? How completely may we note that the hammer and the file have, as it were, a language of their own, whilst, at the same time, we never see this language misapplied?

In wood and ivory carving the Museum also possesses fine works of Gothic art; and here, again, their use to the architect and the art-workman is often direct; but I must dwell no longer on this style. We will pass to the next great phase—the Renaissance—the Quattro-cento and Cinque-cento of the Italians, and, as I suppose, I ought to say, the Elizabethan of our own country; though this last designation, applying, as it does, only to one particular period, by no means adequately responds to the foreign terms which, from the poverty of our English art nomenclature, we are obliged to make use of. We are now coming nearer to our own times; and naturally we have a greater abundance and variety of art-monuments than of the earlier epochs. The diversity of styles, generic, national, or local and individual, not less than the vast variety of modes and processes, now renders it hopeless even to attempt any general review of the specimens in this extensive category; and, as our time is so limited, I shall select for notice one or two classes of works only, which seem to bear upon matters of special interest at the present moment.

My own predilections are strongly in favour of Italian art of that truly wonderful epoch the fifteenth century; and I agree with, as I think, the majority of writers and connoisseurs, that the so-styled Fine Arts—Painting, Sculpture, and Architecture,—at the close of the fifteenth and beginning of the sixteenth century, attained *in Italy*, to a crisis or pitch of perfection, beyond which, speaking in a general manner, it was impossible to carry them, and at which level they could not be permanently maintained. Our eloquent President, if I recollect rightly, in his opening address, somewhat discountenanced the idea of crisis or culminating points in art; nevertheless, I am almost tempted to adopt the notion, that there is some occult law of development for society, or the world at large, analogous to that of the growth and decay of individuals: that the world of art, at all events, does in reality pass through repeating cycles, as it were, of youthful progress, manly perfection, and the decrepitude of age; and that, for instance, ancient art attained to its culminating point in the age of Phidias and Praxiteles, and then for many centuries gradually declined; the sacred flame of art at last waning to the feeblest glimmer in the dark night of universal barbarism, so having reached the lowest point; then again there was a slow but certain revival, till at last it grew again to a second sun-like blaze, in the full light of which stand out the giant forms of Donatello, Brunelleschi, Michelangelo, Raffaelle, &c. Have we passed the lowest point of decline since this? or are we again, with fluctuating intervals of apparent revival, slowly moving in a downward path? I would fain believe that we are again marching onwards in a fresh career, and that the next great dwelling-place of art will be in this our own England. But, I am digressing when there is no time to lose. It is now not a little difficult to choose amongst the mass of treasures in this division of our collection.

The Italian sculptures, I need scarcely say, offer examples of exceeding value to architects. Some of them, such as the marble singing-gallery of Santa Maria Novella, are, indeed, in themselves, complete architectural monuments, practically illustrating numerous points in the application of decorative sculpture on set architectural forms. Moreover, a careful consideration of other specimens, which at first sight might appear to have no direct bearing upon architecture, will, I think, well repay the student: most instructive facts and suggestions may, indeed, often be gleaned from figures or *relievi* viewed as detached specimens, even when there is no certain record of the monuments they originally adorned;—for instance, in the works of that truly great artist, Donatello: and here I am happy to say, that no other museum, not even that of Florence itself, can boast such a series of original works of Donatello and his scholars as this. What wonderful power there is here displayed of dealing with the principles of *relievo!* Sometimes, for instance, we may see apparently the most harsh and abrupt forms in high relief, disagreeable and even repulsive in themselves, assuming the most beautiful and consistent aspects when placed in their proper light, or considered with reference to the part they were destined to subserve in a general architectural composition; and, on the other hand, modes of *relievo* so refined and delicate, so very low or flat, as to be almost as it were like painting on marble; and in this manner we may see the most crowded and elaborate subjects most distinctly and strikingly rendered, and yet with a repose and tranquility of aspect of itself most beautiful. And this, perhaps, when the work was intended to adorn some plain wall space, enlivening it with richly-storied sculpture, without interfering with its obvious stability and breadth of effect. Here occurs to me a striking and most original instance of this mode of treatment; and I cannot forbear to specify it, both because it is almost unknown and also from its remarkable suggestiveness. I instance that most noble and original Italian Renaissance church San Francisco at Rimini, where the entire surface of the marble interior walls of one side of the nave, with its chapels, are covered with sculptures, apparently carved in the mass of the walls after their erection, and not laid on or encrusted,—quite, in fact, on the principle of the ancient Egyptian and Assyrian wall-sculptures. Nothing in Italian art ever struck me as more beautiful or more generally remarkable than the grand figures of saints and angels, of almost colossal proportions, filling the vast wall-spaces of this church; and I could not fail to note the skilful manner in which the degree or style of relief was varied in every part, to suit the light which illumined its particular position.

These noble sculptures are believed to be mainly the work of Luca della Robbia; and here the mention of this great artist brings me to the consideration of an art which is believed to have owed its origin to him; which has a particular interest for us at the present time, now that efforts are being made to revive it; and of which the Museum possesses a complete and unrivalled series of specimens;—I mean the works in glazed or enamelled terra cotta, generally known as

* By Mr. C. J. Robinson, F.S.A. See p. 401, *ante*.

Della Robbia Ware. But first let me apologise for having dwelt at such disproportionate length on the matters already passed in review.

I find I must give up the idea of taking into consideration many special branches of art, in many respects as important as those we have touched upon: the objects in the various categories of mosaics, marqueterie or intarsiatura work, wood-carving, in innumerable applications, especially as here illustrated in the fine series of Italian carved furniture; the cassoni, chairs, cabinets, &c.; then again the works in metal, of iron and monumental bronze, illustrations of the various processes of *repoussé* work, chiselling, damascene work, niello, &c., painted glass and enamels; processes and productions, in short, without number. I can but allude to them in order to dismiss them from our consideration; and in doing so I am conscious that my lecture to-night has been but an irregular and spasmodic attempt to grasp a subject too vast to be treated within such limits. In conclusion, then, I will ask your permission to dwell for a very brief space on the subject of Italian ceramic wares; and in particular on those enamelled terra cottas, as one which has for many years specially engaged my attention. Our collection of Majolica and Della Robbia wares is undoubtedly the most important in existence. I do not separate the two classes of productions, because they are in fact only different manifestations of the same art. We have, indeed, a most important and unique series of works painted on the flat, in the manner of Majolica plates, by Luca della Robbia himself: I allude to the twelve large circular medallions from the Campana collection, representing impersonations of the twelve months, and which there is little doubt were portions of the famous ceiling of the writing-cabinet of Cosmo de' Medici, particularly mentioned by Vasari. My travelled hearers will here, doubtless, be reminded of the bacili or circular painted plates let into the walls and campaniles of so many ancient Italian churches. Now, what an admirable suggestion does this adaptation of ceramic art alone offer to us? In what a variety of ways might we decorate not only exterior façades, but also the ceilings and interior walls of our buildings with enamel-painted pottery and terra-cotta *relievi!*

Amongst the Majolica wares, what beautiful types both in design and execution may we not find for decoration of this kind: take note of the splendid lustred plates, which might now be so readily and so cheaply reproduced: what magnificent effects might not the curved surfaces of such brilliant wares, concave or convex as the case might be, be made to produce, gleaming in the rays of the sun, like diamonds, rubies, and emeralds. Why should we not have rich architecture jewelled, as it were, with such novel ornaments? And then, considering the Della Robbia Ware proper, what a field is there here! Why should not details of every kind be executed in this durable material,—doorways, pilasters, friezes, decorative medallions, &c., to any extent? The incrustation of precious marbles, which we see in Italy; the panels of porphyry, serpentine, &c.; might be imitated, or rather superseded by the still more brilliant coloured surfaces of enamelled earthenwares.

Not that the improved technical processes at the command of the modern potter have as yet carried enamelled terra-cotta work further than of old: the technical perfection of the Della Robbia wares, indeed, is not their least remarkable characteristic: let me point to the huge medallion, 11 feet in diameter, so conspicuous an object in the north court of the Museum, displaying the arms and devices of King René, of Anjou, within a noble border of fruit and foliage: this magnificent specimen, doubtless, from the hand of Luca himself, till within the last few years, had remained in its original position on the exterior of a villa, in the neighbourhood of Florence, ever since the period of its execution,—at least four hundred years; and except where it has been wilfully or accidentally damaged, it is literally as perfect as the day it was made; and the climate of Florence is, I believe, quite as inimical to the preservation of such works as that of England: the extremes of heat and cold are, indeed, much greater than in this country. But our modern English Della Robbia wares as yet do not give promise of such absolute durability.

Our practical potters, in fact, should come and study the works of Della Robbia in our Museum, technically and scientifically, just as architects and art-workmen should take them into consideration from the point of view of art.

We should note, for instance, what exquisite and appropriate qualities of glaze, texture of surface, and colour these old wares present; so different from the glaring whiteness and crude glossy enamels of their modern imitators. In the original specimens the white glaze is subdued to a beautiful creamy grey tint, in order that it should not contrast too vividly with the surrounding stonework of the wall in which it was to be inserted: all the other colours, moreover, especially the blue, are broken and subdued in like manner; and for the same reason the enamel glaze is mat rather than too bright, the white having all the full rich texture of marble, which it was designed to imitate. Fine specimens of Della Robbia ware, in short, are models of ceramic excellence, as much superior to their modern imitators in technical respects as they are as works of art.

The true secret of this excellence is that the great Florentine artist knew exactly what he wanted; he knew the precise qualities he wished to produce; whereas our modern imitators, both here and abroad, are floundering about for want of his refined judgment and intelligence in art, and not because they are unable to master technical difficulties.

I must now bring my lecture to a close: from what I have said it will, I hope, be gathered that I also, in the appropriate and suggestive words of your President, am an advocate for "a free and scholarly art,"—for a proper use of the glorious legacy of the past; and I feel that we are on safe ground in commending to all, both lay and professional men, the objects and efforts of a society like the Architectural Museum—inasmuch as the aim and efforts of that institution are alike definite and practical; its action and the spirit which animates its energetic supporters, moreover, eminently healthy; a spirit especially characteristic of this free country, and scarcely possible elsewhere.

In endeavouring to illustrate the bearing which the more extensive and important Art-Collection of the State has on your special object, Architecture,—though I have made no allusion to the admirable collections of the Architectural Museum also housed within these walls,—I have by no means been insensible to the fact, that this collection created, and mainly sustained, as it has been, by individual or private zeal and devotion to the cause of art-education, is by no means the least useful feature of the great assemblage of monuments of art which have already made South Kensington one of the chief art-centres of the world.

METEOROLOGY IN CONNEXION WITH HEALTH.

A CAREFUL record is kept by a department of the Manchester and Salford Sanitary Association with reference to the climate of that great town and the surrounding neighbourhood.

At present, even in Manchester, the means of obtaining reports as to the atmosphere and the effect upon health, are but limited; for there are but few observers who possess standard instruments; it is to be hoped that, as time rolls on, there will be an improvement in this respect. From the observations which have been already made it is shown that, during the winter of the year 1861-2, the large amount of radiation in the suburban districts caused a great diminution of temperature in those districts; and we have, consequently, a lower temperature in the suburbs than in the centre of cities during winter. The great consumption of fuel in large cities like Manchester tends, to some extent, to increase the effect just alluded to.

In the summer half of the year the dense atmosphere of Manchester prevents the solar rays acting with their full force; and, consequently, we have a lower temperature in the centre of Manchester than in the suburbs. The mean weekly and diurnal ranges of temperature are also much less in the city than in the suburbs, owing to the same cause. There are other details to which we need not now particularly refer.

At a time when only three ozonometers were placed at three stations, it was observed that ozone could not be detected in the centre of Manchester. At Old Trafford it occurs, often in large quantities, with the wind from S.E., S.S.W., W., and N.W.; but none with the wind in any other direction. It is also rarely found when the temperature is excessively low, unless it is accompanied by a strong wind from one of the points above named. At Thelwall it appears to exist with the wind from all points of the compass, especially if the air is warm and moist. At Ollerenshaw ozone exists in large quantities when scarcely any can be detected at the other stations. It also occurs in very large quantities with easterly winds.

The following are notes of the effects of the atmosphere on some diseases:—As regards measles, in 1860, and the first part of the year 1861, this complaint in Manchester was not prevalent, and fluctuated considerably, and did not show any increase or diminution with the changes of temperature; but in the autumn of 1861, as soon as the temperature began to fall, measles rapidly increased, and continued to do so until the close of the year: 66 per cent. of its fluctuations rise and fall inversely as the degree of temperature, thus strengthening the opinion expressed by the Meteorological Sub-Committee of the Sanitary Association, that measles are materially affected by changes of temperature, increasing generally with its fall. We believe that the same will be found to be the case in connexion with typhus and other fevers; and we have often expressed an opinion that this is to a considerable extent caused by closing windows and other apertures in the crowded houses of the poor. On the approach of cold weather the matter should be investigated more carefully than has yet been done. We believe that it is wrong to attribute fevers especially to the summer heat.

Whooping cough began to rise suddenly in the week ending January 12th, after the severe cold of Christmas, 1860. From that time it increased steadily in Manchester, pursuing its course apparently unaffected by changes of temperature, until it reached the extreme height of fifty-six new cases in the week ending November 23, 1861.

Bronchitis and catarrh, influenza and pneumonia, are included under one head, and their course shows the influence of low temperature in predisposing to these affections.

The disease sank to its lowest point (100 cases) on July 27th, and was again very low on August 31st, when the temperature began to diminish decidedly after having been high for eleven weeks.

The record of the committee shows that diarrhœa and dysentery are materially affected by the summer heat: influence was produced on those disorders by a temperature of more than 60 degrees. When the temperature first rises above 60 degrees, a great impulse is given to this disease; and it is when the temperature remains long above this point that a great number of cases of diarrhœa may be expected. In the week ending July 6th, the temperature fell below 60 degrees, and the disease seemed to be checked for a time; but in the week ending July 20th, when the temperature again rose above 60 degrees, it spread rapidly and continued very high until September 1st, when the temperature was again lower.

By the co-operation of Dr. R. D. Thompson, of London, the Manchester Meteorology Committee have been enabled to compare some conditions of Marylebone with those of the last-named town.* We find that in 1861 the death rate of Marylebone was 24 per 1,000, as compared with 31 per 1,000 in Manchester. Notwithstanding the difference of the death rate, there is in proportion to the population a larger amount of sickness reported in Marylebone than in Manchester. Is this to be explained by the greater facilities which exist in London of obtaining hospital and other gratuitous relief?

For the first few months,—from September, 1860, to November, 1861, inclusive,—the diseases of the zymotic class, as small-pox, chicken-pox, measles, scarlatina, and whooping-cough, were much more prevalent in St. Marylebone than in Manchester; and chicken-pox and scarlatina remained so during the whole period. Small-pox, although very low throughout this period, began to prevail most in Manchester; and, in the autumn of 1861, the measles and whooping-cough rose considerably over the rate of London.

Diarrhœa was throughout the period more prevalent in London than in Manchester, and rose to 1,900 new cases in August,—nearly four times the number that were noted in Manchester; but bronchitis and catarrh, erysipelas and dysentery, constantly prevailed much more in Manchester than in London.

All these differences in the prevalence of various diseases at the two places,—if they should continue to appear in future years,—would point to most interesting subjects for future inquiry;—for instance, the influence on disease, not only of climate, drainage, &c., but also of occupations and trades, and of the various impurities in the atmosphere of these cities. It is only by the careful collection of facts, and by the comparison of the health and sanitary conditions of various places,

* The record of cases includes those occurring in Manchester; those occurring in Marylebone, in the pauper, charitable, and public institutions; and those in London in ten charitable institutions.

that we shall be able to arrive at the true effect of various agencies upon man. We trust that the day is not far distant when we shall have sanitary societies firmly established in each of the metropolitan districts, and in the towns and even villages throughout the land. The local good which would result from this would be immense; for besides the active operations of those societies, they would have great power in obliging the authorities to perform their duties; and the facilities which might thus be afforded for comparing facts would be most valuable.

FROM ROME.

AT the last meeting of the Archæologic Academy Signor Grifi, an *employé* in the Ministry of Public Works, read an interesting paper on the statue of Augustus found at Prima Porta, in the ruins of Livia's Villa, called "ad gallinus albas" (from the circumstance of a bird having fallen into the empress's lap, with an olive-branch in its beak). He assumed the age of the subject represented, forty-six (to us the head seemed younger), and that the naked feet were one indication of apotheosis, as seen in other likenesses of Augustus deified. Dwelling on the elaborate reliefs of the cuirass, he conjectured that the Aurora in her chariot was allusive to the fact of Augustus's birth at dawn of day; the other figures to his victories, Actium, Sicily, Spain, Dalmatia. This statue's height (strangely reported by a Roman journal at 11 feet) is only 10 palms; and it is announced that the Government decides to purchase it for 8,000, or, according to other reports, only 6,000 scudi. The last discovery among the same ruins is a spacious chamber underground, with walls and roof perfect, adorned by painting, tints still vivid, of arabesque character in design, flowers, fruit, birds, &c., pleasingly treated. At Ostia have been found the ruins of a temple to Sylvanus.

Mr. Gibson has just finished his very graceful statue of a dancing-girl, suggested by a study of Cerito's movements on the stage. Mr. Spence is executing, and has nearly ready, for Mr. John Grant Morris, of Liverpool, a statue of Flora Macdonald, the heroine of the Stuart cause, celebrated in the story of the Pretender in Scotland; here represented in sorrow after the young prince's departure; seated, mournful and pensive in aspect; the face one of classic beauty overshadowed by grief, but calm; the attitude well expressing the mood of mind. This is the fourth nationally Scottish subject the artist has treated—Highland Mary, Jeanie Deans, the Lady of the Lake, preceding—and all eminently successful.

THE JEWRY WALL, LEICESTER.

AT a recent meeting of the Leicestershire Architectural Society, Mr. Henry Goddard communicated the following paper on the wall:—

"Excavations having been made in front of the Jewry-wall to ascertain its depth and the extent of its foundation, I felt desirous of examining, measuring, and making a correct drawing of the structure. I have done so, and have pleasure in exhibiting the drawing for the inspection of the committee of the Leicestershire Architectural and Archæological Society, with an elevation and section of the wall, and the dimensions of the details.

The wall consists of four arches, with a niche between the two central arches. The present level of the passage between the wall and the church has been considerably raised above the level originally existing in the Roman period. Hence, the piers which sustain the arches or barrel roofs sink below the pavement 7 feet 6 inches. At this depth a line of loose concrete is met with, 14 to 18 inches thick, which probably lay immediately beneath the Roman road or pavement.

The excavation and piers continued downwards below the level about 11 feet. This fact showed that the piers and barrel roofs did not project beyond the face of the wall seen in the recesses more than 4 feet 6 inches; the piers having a perpendicular face of Roman tiles and stone of regular masonry down to the lowest foundations.

The projection of the piers being only 4 feet 6 inches, and the latter showing no connexion with any building in an easterly direction—that is, towards the church of St. Nicholas,—I cannot suppose the fabric to have been a temple, as some antiquaries conjecture it to have been: in my opinion it was the western entrance to the ancient city, having two gateways; and I am the more fortified in this opinion by the remembrance that some years ago, in excavating for the foundation of a building in Talbot-lane, I discovered remains of a paved road, of considerable width, in a direct line between the Jewry-wall and the Watt's-causeway, which connected the town anciently with the Roman road call the Foss-way.

Between the two central arches was a niche for a statue. At the northern end of the Jewry Wall was an arched recess, which, being close to one of the gates, may have formed a sentinel's room. In the wall here were two narrow apertures, with circular heads, intended perhaps for the use of the sentinel in looking out and watching the approach of strangers. At the Southern extremity of the Wall is a similar, but wider recess, having a like purpose, namely that of a guard chamber for the use of sentries. Formerly, a cottage stood in this arch, which was taken down some years ago.

Let me now invite the attention of this society to the dilapidated and unsafe state of this very interesting work of antiquity. Some years since some person cut away nearly the whole of the piers below the barrel roof in order to provide a shelter in which to hang ladders, to protect them from the influences of the weather. On examining the top of the Wall, I find that that portion of it which would have given strength, by counterbalancing the overhanging roof, is perished and gone. Consequently, I consider the overhanging arches are in a very dangerous condition; and if brick piers are not immediately built for their support, we shall very soon see but little left of this remarkable specimen of ancient art and ingenious architecture."

It was resolved that means ought to be taken to preserve the remains, and the secretaries were instructed as to the course proposed to be adopted.

Mr. Vincent Wing communicated some observations upon "The present requirements of Gothic Architecture in order to a successful competition with the works of antiquity."

A PERMANENT COMMISSIONER OF PUBLIC WORKS.

ON the motion for going into committee of supply in the Commons, on the 5th inst.,

Mr. B. Cochrane moved, "That for the sake of obtaining greater unity of design in our public buildings, and with a view to the efficiency and economy of the public service, it is desirable a permanent Commissioner of Public Works and Buildings, or other officer, should be appointed to the present Board of Works." The honourable member said he thought the House would generally agree that in all public improvements there should be unity of design, and as much economy as possible consistent with efficiency. Such unity of design they must admit was not to be seen in the public buildings of London; and he should be able to prove that whatever improvements had been made, had been carried out at a great sacrifice of public income, in consequence of the management of the Office of Works. He would ask any honourable gentlemen who had observed the state of public works in Paris, whether they were not struck by the different manner in which they were carried out from that witnessed in this country? This arose from the fact that here there was no unity in the management of public works. But he was very anxious that the House should take nothing on his own assertion; and if hon. members would walk with him in imagination through some parts of the metropolis, he should be able to point out so much absurdity in the mode in which public works had been conducted, that he thought they would afterwards agree to the motion he now proposed. Mr. Cochrane then expatiated on the merits or rather the demerits of Buckingham Palace, the National Gallery, the monuments in Trafalgar-square, &c., and the mismanagement connected with various public works, such as the State Paper Office, the Record Office, and the Law Courts question, &c.

In reply, Mr. Cowper said his hon. friend had led the House a very agreeable tour round the buildings in London, enlivening his description by illustrations of considerable point; but it was remarkable that all the more important of these illustrations entirely demolished the argument which the hon. gentleman was endeavouring to urge upon the House. The instances which he had quoted of vacillation of purpose, change of mind, and useless expenditure of money, all occurred at periods when either there was a permanent commissioner at the head of the Office of Works, or when the Board of Works consisted of one Parliamentary head and two permanent commissioners.

Mr. Cowper then went into particulars in order to prove the truth of what he had asserted; and he concluded by saying:—The hon. gentleman had referred to Paris; but he had failed to see the distinction there was between the two cases. In the first place the prefect in France was a municipal officer, and more resembled the chairman of the Metropolitan Board of Works than the First Commissioner of Works. But the real difference between Paris and London was that the funds in the former case were ample, and more than were required for any improvements that were thought necessary; whereas the means at the disposal both of the municipal authorities and the Government for the improvement of London were much too small to carry out the large and important works that were urgently needed.

The House was also addressed by Sir John Shelley, in support of the motion; by Sir M. Peto, in advocacy of the French system, and against our own; and by Lord John Manners, against the motion, which was by leave withdrawn.

ARCHITECTURAL PUBLICATION SOCIETY.

THE annual general meeting of the subscribers was held in the Gallery, Conduit-street, on the 29th ult.

The chair having been taken by Mr. James Pennethorne,

Mr. Arthur Cates, the hon. secretary, read the report of the committee and the balance-sheets of the accounts of the society. The balance-sheets appended showed,—

"The receipt and expenditure for the several years, and that the total receipts for the thirteenth year, 1860, have been, subscriptions, 345*l.* 10s.; other receipts, 170*l.* 19s. 9d.; together, 517*l.* 9s. 9d.; and the expenses of the year, 456*l.* 10s. 1d., leaving a balance of 61*l.* 19s. 8d. to be carried forward in favour of the succeeding year, 1861, the accounts for which show a balance of 236*l.* 6s. 11d. available for the completion of the issue for that year (now in hand), and a balance of subscriptions already received for the year 1862 (fifteenth), of 206*l.* 8s. 9d., to meet the cost of the parts now in preparation for issue;—the total balance in hand being 475*l.* 19s. 8d., of which amount 430*l.* is placed on deposit account with the Union Bank of London in the name of the treasurer."

Mr. Pennethorne, in moving the adoption of the report, congratulated the members on the services rendered by all those who devoted so much time and attention to the interests of the society, and the production of the "Dictionary of Architecture;" and he expressed his satisfaction with the careful, although gradual manner in which the work was produced. He insisted that the first object of the society was to produce a complete work, that should become a standard book of reference, and indispensable to both the architect and the man of taste; and therefore he thought that it would be better to be slow than to admit any imperfections. He pointed out the manner in which the discussion at the last annual general meeting had influenced the committee in dealing with the articles in the part recently issued, and the principle of condensation applied to the scientific articles. He alluded in feeling terms to the loss the society had sustained by the withdrawal from the committee of Mr. J. M. Lockyer, whose knowledge and abilities had, from the foundation of the society, been ever employed for the advantage of the members.

Some few explanations having been made in reply to inquiries from members, the motion was unanimously adopted.

A vote of thanks to the committee and treasurer was proposed by Mr. T. W. Plum.

Mr. H. Bowman seconded the motion. The work in hand was one which merited the support of every member of the profession, and the list of subscribers should be far more numerous than it was. He believed that the slow issue of the Dictionary acted prejudicially in this matter, and prevented many from subscribing who would otherwise do so; and he particularly mentioned a very general and hurtful belief that the book would eventually be issued at a lower price.

Mr. J. Papworth alluded to the course pursued by some publishers in re-issuing books at a very great reduction in price, but shortly after the original publication; and he stated what he considered as a guarantee that this would not be the case with this society.

Mr. Cates gladly replied to Mr. Bowman's inquiries; especially as he (Mr. Bowman) must be considered as in some degree representing the numerous and influential subscribers of Manchester and the North. Each member of the committee was as much personally interested in the speedy completion of the Dictionary as any individual subscriber could be; but with them rested the responsibility of producing a satisfactory and complete work; and while admitting that by adopting the ordinary system of compilation, the remainder of the Dictionary might be produced very rapidly; he deprecated, in strong terms, adoption of any such course by which the value of the the work already issued would be much diminished. The difficulty of obtaining accurate information on the simplest matters was remarkable. As to the fear expressed by Mr. Bowman that the price might at some future period be lowered, to the disadvantage of the subscribers, he expressed his conviction that the declaration of the committee that they would never

allow a single copy to be sold for less than the subscription price, would be strictly carried out. The stock was all paid for, and in the custody of the Society, and no debt existed, or was ever likely to be incurred.

Professor Smirke, R.A., regretted to find that any one doubted that the Society intended, so far as they were concerned, to fulfil the pledge they had put forward, of not allowing the books to be sold under the publication price, and thought that not the least apprehension of such a contingency need be feared. He wished it were possible to hasten the work to completion. A large accession of new subscribers would, he thought, materially assist in producing this desirable result.

The resolution having been unanimously adopted, Mr. Smirke moved a vote of thanks to Messrs. Wyatt Papworth and Arthur Cates, the honorary secretaries,—to the former for the labour of arranging and utilising the "*indigesta moles*" of information and suggestions, and of condensing and collecting it, and reducing the whole mass to that concise, symmetrical, and harmonious form in which it appeared; and to his colleague, Mr. Cates, they were much indebted for the manner in which the business was conducted and the accounts arranged. This and other votes of thanks, to the local honorary secretaries, to the contributors of sketches and subjects for illustration, and to Mr. Octavius Hansard for his services in preparing them for publication, proposed by Mr. St. Aubyn and seconded by Mr. Wyatt Papworth, were carried unanimously;—also a vote of thanks to the chairman.

LINCOLN DIOCESAN ARCHITECTURAL SOCIETY.

THE annual meeting of this society has been held at Sleaford. The proceedings opened with divine service in the church; after which the fabric was briefly remarked upon by the Rev. Ed. Trollope, and attention drawn to its chief beauties and points of interest by Mr. Kirk. The members and their friends afterwards assembled in the large room of the Corn Exchange, when the chair was taken by the Marquis of Bristol, and a paper upon "The Family of Carre of Sleaford," was read by Mr. Maurice P. Moore, F.S.A. The next business of the day was a visit to the Castle site, on the outskirts of the town. Here some excavations had been made, which revealed portions of the foundations in a fine state of preservation; and by the aid of a ground-plan Mr. Kirk succeeded in giving his hearers an idea of the former position, extent, and strength of the structure. Returning to the Corn Exchange, we took a brief glance of some of the rubbings of brasses, photographic sketches, and water-coloured drawings on the walls.

The Excursion left the Market-place, at two o'clock, and visited some of the churches of the neighbouring district. The programme of the route was through the villages of Kirby Laythorpe, Asgarby, Ewerby, Howell, and returning through Heckington to Sleaford. A numerous company of ladies and gentlemen made the excursion in between twenty and thirty carriages.

The evening meeting took place in the Corn Exchange, at eight o'clock, when papers were read by the Rev. Canon Marsden, Professor of Archæology in the University of Cambridge, and Sir Gardner Wilkinson; the former entitled "Observations on certain Remains of Roman Art, at Ancaster;" and the latter, "Long and Short Work."

On the following day the party left the Market-place at ten o'clock, and visited the following churches: — St. Botolph's, Quarrington; St. Peter's, Ranceby; St. Martin's, Ancaster; St. Mary's, Wilsford; Kelby; St. Michael's, Haydor; St. Thomas à Becket's, Aunsby; St. Mary and All Saints', Swarby; and St. Dionysius's, Silk Willoughby.

The public dinner, which was attended by ladies as well as gentlemen, took place in the Corn-Exchange, at half-past six o'clock; and at eight the evening meeting was held in the same room, when a paper was read by the Rev. E. Trollope, entitled "Shadows of the Past History of Sleaford."

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND.

THE Lord Lieutenant having consented to receive a deputation from the reorganised Institute, the following gentlemen waited upon his Excellency, viz., Messrs. Charles Lanyon, J.P., president; Jacob Owen, V.P.; S. Symes, W. G. Murray, E. H. Carson, J. M'Curdy, and J. J. Lyons. The president explained the objects of the Institute, which are for "the general advancement of civil architecture, the promotion and facilitating of the knowledge of the arts and sciences connected therewith, the formation of a library and museum, the establishment of uniformity and respectability of practice in the architectural professions," &c.; and having read the list of newly-selected officers and council, the president respectfully solicited the honour of his Excellency's acceptance of the office of "patron" of the Royal Institute.

Lord Carlisle replied in brief terms, dwelling upon the improvement that had taken place, of late years, in the architecture of our cities and towns, and concluded by expressing his gratification in accepting the office to which he had been elected.

AMSTERDAM MUSEUM COMPETITION.

THE commission constituted to settle as to the erection of a Museum of Works of Art in Amsterdam appeal to architects of all countries for designs. It is intended as a monument to the memory of the first sovereign of the reigning dynasty. The architectural style and the materials to be used are to be regulated not only by the monumental intention of the building, but by its purpose, which is, the exhibition of works of the Dutch school, especially those of the sixteenth and seventeenth centuries. The cost is not to exceed 500,000 florins of the Low Countries.

The author of the design considered the best is to receive a premium of 1,500 florins; the author of the second, 300 florins.

The designs and particulars are to be sent in by the 1st of February, 1864.*

COMPETITIONS.

Frome.—The Committee appointed to carry out the scheme for new Public Baths, in honour of the marriage of the Prince of Wales, having advertised for designs, those by Mr. C. J. Phipps, architect, have been selected.

Windsor.—The committee appointed to carry out this work have been engaged during the past fortnight in receiving and examining the five sets of plans sent in to compete for the new church. For the better performance of this duty Mr. Christian, architect, was selected as their assessor. The designs most approved were by Mr. A. Blomfield and Mr. Norton. The latter, after negotiation, has been adopted. Eight builders have been selected to send in tenders, viz.—Messrs. Wheeler, Snowball, Hollis, Lawrence, Cleave, Holden, Gray, Fassnidge, and Myers.

PROPOSED STREET FROM THE STRAND TO HIGH HOLBORN.

A CORRESPONDENT, "M.," urges the formation of a direct street from the Strand up Newcastle-street, continuing in the same line through Clare Market to the corner of Portsmouth-street, Lincoln's-inn-fields; thence through the west side of Lincoln's-inn-fields, through Gate-street, and Little Turnstile into High Holborn, nearly facing Day & Martin's. The advantage of this course is this, that two-thirds of the distance is already made; and the cutting through Clare Market diagonally will open up a district, to say the least of it, which requires ventilating. The fact that one side of Little Turnstile is now pulled down, gives force to the proposition. If the houses there be rebuilt, a narrow passage, allowing only two persons to pass at one time, will be perpetuated.

ANTIQUITY OF MAN:

THE ASSERTED DISCOVERY AT LILLE.

As we supposed, the statement to which we were induced by the high character of the *Siècle*, especially,—wherein we first saw the paragraph which has been going the round of the French press,—to give increased publicity, though with great reservation as to the facts, turns out to have been an invention. We have now before us the original number of the *Echo du Nord*; and not the slightest indication, by heading or otherwise, do we find in that henceforward *trustworthy* authority, more than in journals upon which it succeeded in imposing, that the assertions in the paragraph were less authenticated by the signature of the *rédacteur* of its *Chronique Locale*, than matters of information following the paragraph. Geologically regarded, there was manifest improbability that human remains should be found in the *calcaire grossier* of the Oise, which is of the Eocene formation, of a date long antecedent to the first appearance of all recent species of plants and animals. It seemed just possible, however, that there had been some petrifaction; and that, if so, the question which has lately received so much attention might be affected one way or the other. As the result is, the *Echo du Nord* has not only brought disgrace upon the French press, in relation to serious questions that are being followed up in a manner which is creditable to men of science of the two countries; but it has succeeded in causing much annoyance to those Frenchmen who are most to be honoured for the services they have rendered to the question of the antiquity of the Human Race. The *Abbevillois* has treated English men of science at least, with more respect.

It may have been noticed that one of the latest expressions of opinion, by M. Elie de Beaumont, the best known in England of French geologists, is not at all favourable to the antiquity of the *strata* at Abbeville, in which the jaw-bone was found. There is a letter in a recent number of the *Athenæum*, on the other hand, referring to discoveries at Gibraltar, which seem to bear on the question.

* A copy of the programme may be seen at our publishing office, York-street.

DECORATIVE HOUSE PAINTING.

A CORRESPONDENT, "Thomas Kershaw," after objecting to some of the awards on the works exhibited in Painters' Hall, says,—It is high time something should be done to place this business on a better footing. It is too much in the hands of builders and agents, who know but little of the business, and merely use it as a matter of pounds, shillings, and pence. This accounts for so much bad painting being done. The architects have it in their power to alter this to a great extent, by giving each tradesman his own special work. By this means we should have better workmen, better materials used, and the customers better satisfied.

IMPROVED WORKING-CLASS DWELLINGS FOR LONDONERS.

ON Saturday a meeting of merchants, bankers, and others desirous of co-operating with a view to improve the homes of the working classes of London, was held at the Mansion House, Lord Stanley presiding.

It is proposed to form an association of twenty or thirty gentlemen, protected by the Limited Liability Act, and having a capital of 25,000*l.* to 50,000*l.*, to be invested in the erection of a series of blocks of improved dwellings.

Lord Stanley, in the course of his opening speech, said they were profiting by the experience which others had at their own cost obtained for them: they would be able to avoid errors of detail; and, in the main, he thought they would differ from their predecessors chiefly in this, that they would look rather to the accommodation of families than of single men, and not to the highest amount of rent which the better class of persons among the labouring classes could afford to pay, but to what was necessary to make the undertaking remunerative to themselves as an association. In the first place, it was simply impracticable to attempt to lodge the labouring population of London in a manner otherwise than remunerative to those who did it. What they had to go upon was the experience which Mr. Waterlow had obtained in erecting a block of buildings in a crowded part of Finsbury. Mr. Waterlow said that for a sum of 25,000*l.*, including all preliminary expenses, and also the dividends for one year on the capital during the period of construction, they would be able to put up blocks of buildings for the accommodation of 200 families. The gross estimate was 25,000*l.*; and assuming that each house on a moderate estimate would be let for about 15*l.*, that would give a gross return of 3,000*l.* a year, or 12 per cent. on the gross outlay. From that if they deducted, in respect of ground-rents, cost of supervision, the occasional loss on rooms unoccupied, and other incidental expenses, 50 per cent. on the returns, a net return of 6 per cent. would still be left after the payment of all expenses. He was glad to see that a sum of 14,000*l.* had already been subscribed towards the object in view.

Mr. Waterlow explained his plan more in detail; and several other gentlemen addressed the meeting.

A working or provisional committee was then nominated for carrying out the undertaking, composed of Lord Stanley, as chairman, Alderman Waterlow, Alderman Finnis, Mr. Samuel Morley, Mr. Henry Edwards, Mr. Travers Buxton, and Mr. Ellis. The chairman took shares to the extent of 500*l.*

CHURCH-BUILDING NEWS.

Birmingham.— The new cemetery for the borough, at Witton, of which we have already given details, and also views of the buildings, has now been formally opened.

Castleford.—It is proposed to build and endow a church at Allerton Bywater, to hold about 230 persons; and to form that portion of the parish of Kippax into a separate district, having a resident clergyman. It is hoped 2,000*l.* may be raised by subscriptions for this purpose. Subscriptions to nearly one-half the amount have been already promised.

Newcastle-upon-Tyne.—An endeavour is being made to procure the means of removing the high wall of St. John's Church, and erecting a palisading. The churchwardens have appointed a committee for the purpose.

Carlisle.—The new free church of Scotland, lately erected on the Warwick road, has been opened for divine service. The sole contractors for the building were Messrs. Nelson, of this city; the design having been furnished by Mr. Raeburn, architect, Edinburgh. The total cost of the church will be about 1,650*l.* The design is Gothic, but plain and simple in external appearance. It is built of red freestone: a square tower rises from the west corner of the front elevation to the height of 75 feet. From each corner of the tower rises an ornamental turret crowned with the national emblem of Scotland; and a finish is given to the opposite corner by another turret of similar design. The west side of the building is divided into four bays by buttresses. The other side of the church is left for the present in an unfinished state, the intention being to erect a manse on the vacant space adjoining as soon as the congregation are in a position to do so. The principal entrance is by an arched doorway gained by a flight of steps from Warwick road; and access to the interior is obtained from each side of an entrance hall. The building is surrounded by a palisaded area. The interior is in keeping with the exterior, and is plain, with pews arranged down each side and a row in the centre. A gallery runs round three sides of the church, and in every part space has been economised. Daylight is admitted by a triplet window at each end as well as by side lights. The church is capable of accommodating above 700 people. Beneath is a hall to be used as a Sunday school and for other purposes.

Dumfries.—The Buccleuch-street United Presbyterian Church at Dumfries has been opened. It has been built from designs by Mr. Alexander Crombie, architect, and is of the Early Gothic style of architecture; the doorways, however, being partly of the Second or Decorated style. The front—the north gable—is to Buccleuch-street. In the interior the roof is open, and the galleries extend along both sides and the north end of the building. The main beams of the roof are stained in imitation of oak, and the other woodwork varnished. The contractors were—for mason work, Messrs. J. Crackstone & Son, Maxwelltown; joiner work, Mr. R. M'Courty, Dumfries; painting and glazing, Mr. R. Coltart, Dumfries; plastering, Mr. W. Thompson, Glasgow; slating, Mr. T. Adair, Dumfries. The entire cost will be about 2,000*l.*

Glasgow.—The foundation stone of a United Presbyterian Church has been laid in East Campbell-street. It is to accommodate 1,400 sitters, and the edifice will cost about 5,000*l.* The new building is being erected on the old site. The walls are already considerably advanced,—and the church, it is expected, will be opened about the end of the year.

STAINED GLASS.

Chester Cathedral.—A stained-glass window has been executed for the north side of the apse by Messrs. Heaton, Butler, & Bayne, of London. The principal subjects are Mary at the Feet of our Lord, and the Resurrection of Lazarus. Beneath these are smaller subjects, viz, Jairus's Daughter, the Widow of Nain, Paul raising Eutychus, and Peter raising Dorcas. In the tracery is the general Resurrection. The window was the gift of Mrs. Massey, of Moston Hall, near Chester.

Lincoln Cathedral.—The Revs. A. T. & F. H. Sutton have added another stained-glass window to the nave of Lincoln Cathedral. The subjects are taken from the life of Samuel.

Algarkirk Church (Lincolnshire).—The rector has placed a memorial window at the west end, which will form a contrast to the chancel window at the east end. The stonework of the window consists of six lights, with flowing Decorated tracery. The lower lights are some 15 feet in height. The glass comprises a series of eighteen subjects arranged in three tiers, the whole being canopied after the manner of ancient glass—coeval with the style of the stonework. The tracery is filled with floriated designs comprising sacred emblems, angels, &c. The subjects of the upper and lower tiers refer to our Lord's Death and Resurrection, arranged triplet-wise: thus, on the upper range, on the left, three divisions are devoted to the subject of our Lord's Entombment: on the right the spaces are in like manner devoted to the Resurrection. At the lower part of the window are two triplets similar in disposition to those just described. In the one case are shown the Maries, St. Peter, and St. John journeying to the sepulchre, upon which is shown seated the Guardian Angel: in the other, our Lord is shown appearing after his Resurrection to the Maries. The middle tier of subjects represent six mercy works of our Lord in "Raising from the Dead," and "Healing the Sick:" these subjects, instead of being arranged in triplets, as in the other cases, are complete, one in each light. The rector intends also filling the north and south transept windows. The artists of the west window were Messrs. Clayton & Bell.

Peterborough Cathedral.—Mrs. Edmunds, widow of the late Rev. Payne Edmunds, LL.B., the late rector of Theddlethorpe and Mablethorpe, Lincolnshire, has signified her intention of placing a memorial window in this cathedral. The window selected contains two perpendicular lights, the subject of one being the Magi worshipping and offering Presents to the Infant Jesus, and the other a representation of Christ blessing Little Children. The artist is Mr. A. Gibbs, of London.

All Saints', Norwood.—The east window of All Saints' Church, Norwood, has been filled with stained glass by Messrs. Heaton, Butler, & Bayne, of London. The subjects are the Crucifixion, Resurrection, and Ascension. The figures between the subjects are the four Evangelists. In the tracery is the subject of the Angels appearing to the Shepherds. The window was a gift of a parishioner.

SCHOOL-BUILDING NEWS.

Ipswich.—The new National Schools for Trinity district parish, which have been erected at an expense of about 1,400*l.*, raised by subscription, are completed. The site is the gift of Mr. J. C. Cobbold, M.P., and is a field at the back of Albion-street, and not far from the gasworks, in the centre of a very poor and populous district.

Dodworth, near Barnsley.—By the liberality of Mr. T. W. Vernon Wentworth, a Church of England School is about to be erected for the benefit of the inhabitants of the Gilroyd district; and the foundation-stone has just been laid. Mr. Amos Taylor is the architect, and Mr. W. Ingham the contractor for the mason-work.

Jarrow.—The schools erected at Jarrow as a memorial of the late Mr. Cuthbert Ellison have been formally opened by the Bishop of Durham. The schools are plain in external appearance. They have cost upwards of 1,200*l.*, the greater part of which has been defrayed by Sir Walter and Lady James.

PROVINCIAL NEWS.

Oswestry (Salop).—A Public Hall Company has been formed here, and Messrs. Bidlake & Spaull, architects, have been instructed to prepare working drawings and obtain tenders for a public hall. The directors expect to have the foundation stone laid in July. The hall is to be in the Italian style, with a tower over the entrance; and the large hall is to be 82 feet long and 36 feet wide, capable of accommodating 750 people. The reading-room will be 25 feet by 28 feet; and the building will also contain a library, coffee and smoking rooms, class-rooms, kitchen, hall-keeper's bedroom, retiring-rooms, &c.

Langport (Somerset).—The Local Government Act has been adopted here by the owners of property and ratepayers of the borough and parish. There were twelve for and twelve against it, and the chairman gave his casting vote in favour of the Act.

Falmouth.—The excavations for the Falmouth Hotel have been commenced. The hotel will contain about forty bed-rooms, coffee-rooms, sitting and smoking rooms, and on every floor there will be bath-rooms. A short tunnel is to be carried from the grounds to the beach, for the purpose of sea-bathing; and convenient stabling and offices will be erected contiguous to the building. There will be an approach road from the railway station to the house, and the grounds will be laid out with shrubberies. Shares have been taken up to the amount of more than 16,000*l.*, the whole capital being 20,000*l.*

Holyhead.—A new stone pier, nearly 500 yards long, extending through the large area under Tan-y-ran from the railway station to the old pier, has been commenced here. The London and North-Western Railway have contracted with Messrs. J. & C. Rigby, of Royal Victoria Harbour, Holyhead; and we understand that the whole works will cost at least 250,000*l.*

WORK DONE BY A "MONKEY."

IN answer to the query of "S. C. E.," in the *Builder* of the 30th ult., I beg to say that the effect of the blow given by a fallen body is proportional to its weight multiplied by the velocity with which it strikes. This velocity is found from the formula

$$v = \sqrt{2gh}$$

g being the force of gravity, or 32 feet, and h the height fallen through. Thus, if the "monkey" weighs 2 tons and falls 40 feet, we may consider the work done as equal to $2\sqrt{64 \times 40}$ in tons, or about 100 tons. E. WYNDHAM TARN, M.A.

Books Received.

London Scenes and London People. By ALEPH. London: Collingridge, City Press, Aldersgate-street. 1863.

THIS is a well got up and pleasant gossiping volume of anecdotes, reminiscences, and sketches of places, personages, events, customs, and curiosities of London city, past and present; and is well adapted to instruct, in a light and introductory way, the general reader on these subjects. The following graphic sketch of Lombard-street in 1805 will give some idea of the writer's style:—

"I have a vivid recollection of Lombard-street in 1805. More than half a century has rolled away since then; yet there, sharply and clearly defined before the eye of memory, stand the phantom shadows of the past. I walked through the street a few weeks ago. It is changed in many particulars: yet enough remains to identify it with the tortuous, dark vista of lofty houses which I remember so well. Then there were no pretentious, stucco-faced banks or offices: the whole wall surface was of smoke-blacked brick: its colour seemed to imitate the mud in the road; and, as coach or waggon or mail-cart toiled or rattled along, the basement stories were bespattered freely from the gutters. The glories of gas were yet to be. After three o'clock p.m., miserable oil lamps tried to enliven the foggy streets with their 'ineffectual light,' which through dingy, greenish squares of glass you might observe tall tallow candles, dimly disclosing the mysteries of bank or counting-house. Passengers needed to walk with extreme caution: if you lingered on the pavement, woe to your corns! If you sought to cross the road, you had to beware of the flying postman or the letter bag express. As six o'clock drew near, every court, alley, and blind thoroughfare in the neighbourhood echoed to the incessant din of letter-bells. Men, women, and children were hurrying to the chief office, while the fiery-red battalion of postmen, as they neared the same point, were apparently pleased to bank the diligence of the public, anxious to spare their corpuses. The mother post-office for the United Kingdom and the colonies was then in Lombard-street, and folks thought it a model establishment. Such armies of clerks! such sacks of letters, and countless consignments of newspapers."

VARIORUM.

THE January part of the *Proceedings of the Kilkenny Archæological Society* is a very good one. It is illustrated with representations of a remarkable casket of ivory or tusk of the walrus, covered with carvings of animals, birds, lizards, and knot work, which is preserved in the Ducal Museum, Brunswick. The great peculiarity of the casket is that on slips of bronze, at the bottom, with which the plates of ivory are bound together, is an inscription in Runic letters. Professor Stephens, of the University of Copenhagen, in the paper accompanying the illustrations, gives ingenious reasons for thinking that the coffer was made by Nethi, an Irish artist settled in Northumbria, for Eli, or St. Eligius, or Eloy, Bishop of Noyon and Tournay, in Gaul, in the first half of the seventh century! The casket is one of rare interest; even if the date of it turn out to be not quite so remote as this. The bronze settings *may* have belonged originally to an earlier work; although we confess the illustrations give no reason to think so.——*The Children's Friend*, Part I. (Kent & Co.), is a good sixpenny worth of tales and poetry, likely to please those for whom it is printed. In reprints the author's name should be given.——"Barr's Improved Rent-book. Birmingham: Barr, 91A, New-street." This useful little penny card book, as we may call it, is so prepared that it can be used for two years from any date, and

contains in addition a blotting leaf and rent-table; and is got up in a neater and better manner than the usual rent-book for weekly tenants.——"Brief Biographies of Inventors of Machines for the Manufacture of Textile Fabrics. By Bennet Woodcroft, F.R.S. London: Longman & Co. 1863." In this volume there are well-written recasts of the narratives as to John Kay, Richard Arkwright, Samuel Crompton, Edmund Cartwright, Joseph Marie Jacquard, William Radcliffe, Richard Roberts, Joshua Heilman, and Lewis Paul. ——*The National Magazine*. Tweedie, Strand." The June part (No. 80) of this magazine contains an article on "Personal and Relative Beauty," illustrated by a steel engraving; and one on "The Royal Academy;" besides the usual variety of readable matter.——We have also received the June number of the boys' periodical called *Young England* (Tweedie), devoted to the instruction and amusement of the educated youth of the British empire. The first article in it is one on "Ragged Schools," with an illustration; and there are several other good articles, with various illustrations.

Miscellanea.

ELECTRO-TELEGRAPHIC PROGRESS.—The telegraphic cable which is to unite the coast of Spain with England will extend from Corunna to Falmouth, a distance of 600 miles.

ALBERT MEMORIALS.—The Birmingham Statue is to be erected at the top of Paradise-street, if the Corporation give their sanction to the proposed site.——The Clock Memorial at Rye has been fixed in the ancient tower of Landgate, and the event was celebrated by a public dinner. The clock cost 100*l*.

WOOD CARVING, SOCIETY OF ARTS.—We hear that about eighty specimens have been sent in, in reply to the offered premiums, and that the adjudication will be made this week. The council have named as judges Messrs. M. D. Wyatt, J. G. Crace, P. Graham, and John Bell: the Society of Wood Carvers have named Messrs. Anstey, Burgess, Reeve, and Broads.

PROTECTION OF IRON FROM RUST.—In reference to the remarks on p. 373 of the *Builder*, quoted from a discussion at the Society of Arts on this subject, a correspondent, "Joseph Hayes," builder, says,—"Red lead, and one-third litharge made into paint with nut oil instead of linseed oil, would last much longer. Nut oil is more durable: it will stand the weather much longer than any other oil in paint."

MONUMENTAL.—The design for the Hollings's Memorial, at Leicester, selected by the committee, and locally exhibited, is that of Mr. Chamberlain, of Birmingham. The second design submitted in competition was by Messrs. Stevenson & Newenham, of London and Halifax. It has been suggested that a joint memorial, in honour of Sir Thomas White, William Wiggeston, and Alderman Newton, might very suitably stand in the centre of the Haymarket, and that a Gothic cross like this second design would be sufficiently high, without taking up too much space. Although drinking fountains are not popular in Leicester, there is no better site for one, and this idea is carried out in the design alluded to.

ST. THOMAS'S HOSPITAL.—A general court of the governors of this hospital was held last week, to receive a report of the proceedings of the Grand Committee in continuing the negotiation with the governors of Bethlehem Hospital, and also to receive the Grand Committee's suggestions with a view to prevent any further delay in fixing on a site for a new hospital. Sir John Musgrove, president of the hospital, took the chair, and there were about fifty governors present. The general report of the committee was read. It stated that, on the 20th of January last, the Grand Committee communicated to the governors the particulars and plans of seven sites:—1. Bethlehem Hospital; 2. Fishmongers' Company's land, Walworth; 3 and 4. Surrey Gardens; 5. Land behind Newington Church; 6. Myatt's ground, Camberwell New-road; and 7. Lambeth Thames Embankment. The Grand Committee reported that they expected the concurrence of the general court, that it was useless to press their negotiations with Bethlehem Hospital further. If the Newington site could be obtained, the committee unhesitatingly preferred it; but, failing that, they saw but little difference between the Surrey Gardens and Myatt's ground. On the motion of Mr. Tite, the report was received, and ordered to be printed and taken into consideration on the 28rd instant.

BRITISH INSTITUTION.—The annual exhibition of works of the Old Masters is now open here, and includes fine pictures by Murillo, Rembrandt, Canaletto, Gainsborough, Hobbima, and Romney.

ARCHITECTURAL SOCIETY OF NORTHAMPTON.—At a recent meeting of the committee for local antiquities, various objects of interest were exhibited, and the Rev. H. L. Elliot read a paper, on Kingsthorpe Church, which is now undergoing extensive alterations, under the supervision of Mr. Slater, architect.

MECHANICAL ENGINEERS IN LIVERPOOL.—At a recent meeting of the Liverpool council, a letter was received from Mr. W. M'Gregor, chairman of the Institution of Mechanical Engineers, requesting the patronage of the mayor to the proposed session of that society in Liverpool in August next, and for his influence in obtaining the gratuitous use of the small concert-room in St. George's Hall, for the purposes of the Society, on the 4th, 5th, 6th, and 7th of the month. It was resolved that leave be granted for the use of the room.

ST. ANDREW'S HALL, NORWICH.—The architect entrusted with the restoration of this building, Mr. T. D. Barry, writes,—"Will you permit me to say that no doubts whatever are entertained, either by the restoration committee, the contractor, or myself, that the works will be completely finished by the 7th of August next. I desire to make this statement in order to satisfy such of your readers as may be interested in the Musical Festival, which takes place in the middle of September."

PROPOSED NATIONAL MONUMENT TO SHAKSPEARE.—At Drury Lane, on the 30th inst., a grand dramatic *mélange* will be given in aid of the funds for a national metropolitan monument to Shakspeare, under the presidency of Mr. Macready; the Prince and Princess of Wales having signified their intention to be present. The performances will consist entirely of Shaksperian *chefs d'œuvre*, selected from eleven of his plays, and will introduce sixty eminent actors, who have spontaneously given their aid to the cause. The hon. secretary is Mr. Adolphus Francis, of 43, Cumberland-street, Hyde Park.

FIRE AT WESTMINSTER PALACE.—The Houses of Parliament have had a narrow escape from destruction by fire. It seems that a flue from the kitchen passes over the wooden roof of the lobby leading from the library to the members' tea-room. A brick had become displaced from this flue, and the heat caused the wooden roof to ignite. There had been a smell of burning noticed throughout the morning, but it was three o'clock in the afternoon before the discovery that the building was on fire was made. Then a waiter passing along the lobby noticed it, and the alarm was speedily given; and, in a very short time, all danger was passed. On a strict examination all beyond was found to be safe.

FEVER AT BOSTON, AND ITS SANITARY COMMITTEE.—Notwithstanding the painful fact that fever of a malignant kind is raging in Boston, and carrying off its victims one after another almost daily; the Sanitary Committee of the Local Board, "we are informed, on reliable authority," says the *Lincolnshire Chronicle*, "are perfectly listless and apparently quite indifferent in the matter, for they have not had a single meeting for more than six months!" Since writing the above, adds our authority, it has come to our knowledge that no less than five children now lie dead in Tydell-street from the effects of fever and diphtheria. The latter disease is extremely prevalent, not only in the town, but in the country adjacent as well.

SUB-CONTRACTOR'S NEGLIGENCE.—The defendant in the action Blake *v.* Thirst, in the Court of Exchequer, had contracted with certain town commissioners to make a sewer, and agreed not to underlet without consent of their engineer, who did consent; and defendant then underlet the excavating, watching, and lighting, to one Neave. Neave made a hole in the road, but did not sufficiently protect, watch, or light it; and in consequence a child fell in and was injured. The question was whether the defendant, as contractor, or Neave, as sub-contractor, was liable. The Lord Chief Baron said, "It seems to me to be a very plain case. The hole in the road, which was the cause of the injury, was made by the defendant, or under his immediate direction: the hole so dug was not protected, watched, nor properly lighted, in consequence of which the accident occurred; and I think the defendant is himself liable for it." In this opinion the rest of the Court concurred.

ARCHITECTURAL ASSOCIATION: VOLUNTARY ARCHITECTURAL EXAMINATION CLASS.—On Saturday the class and other members of the Association will proceed to view Waltham Abbey, under the guidance of Mr. Burges. Train from Bishopsgate, 2·40 p.m. On Wednesday, 17th inst., the subject of consideration is "Mensuration." The subject for sketch, "A drawing showing the drainage of a house, with rain-water tank and cesspool."

DISCOVERIES IN THE ISLE OF RHODES.—M. Salzmann is pursuing his excavations in the Isle of Rhodes. *La Chronique des Arts* states that he has recently discovered some ornaments in gold and silver likely to interest archæologists, especially a necklace with seven *plaques*, adorned with figures of centaurs, the style of which recalls at the same time that of Greece, Asia, and Egypt.

CREETOWN GRANITE.—The largest granite monument in the Undercliffe Cemetery, Bradford, is the Smith Memorial Obelisk, just erected by Mr. Sim, of Glasgow, on the brow of the hill, 300 feet above the level of the Bradford valley. It is a monolithic needle, erected on a solid granite basement and pedestal. The material is silver-grey granite, from Wigtown Bay, the same as that for which Mr. Sim received a medal at the International Exhibition of 1862.

ALBERT MEMORIAL CHURCH, COLLYHURST, MANCHESTER.—The foundation-stone of this church was laid on the 6th inst. The site has been given by Sir O. Mosley, Bart. The Church will be of the Geometrical style of architecture, with nave 90 feet by 46 feet in one span, with hammer-beam groined open roof, chancel, organ-chamber, and vestry. The tower and spire will be at the west front. The external walls will be of red bricks, relieved with white and blue bricks, and stone dressings to the doors and windows. All the seats will be open, stained and varnished, with accommodation for 704 persons. The choir seats are in the chancel. The cost of the church, including enclosing the site, heating apparatus, lighting, &c., will be 3,900*l*. The works are being executed by Messrs. Clark & Jones, builders, under the superintendence of Mr. John Lowe, architect, both of Manchester.

THE ENGINEERING DEPARTMENT OF INDIA.—In the *Engineer's Journal* of Calcutta there is a leading article, on 1st April last, in regard to the letters which have appeared in the *Builder* and the *Friend of India* on this subject, in which the editor says:—"We are convinced, by information drawn from various reliable sources, that great misconception exists in many quarters at home with regard to the advantages of the Government service in India, not only among engineers, but among the public generally; and in so far as the writer of the letter in the *Builder* endeavours to remove false preconceptions, and therefore to prevent future disappointment to successful candidates, we think his communication may do good. As the writer has himself experienced the disappointment against which he endeavours to warn others, and writes under a certain sense of injury, allowance must be made for some slight exaggerations which are manifestly not intentional. Finally, then, we admit that the prospects of the civil engineers might be and we think should be improved. A more liberal scale of pay and pension might be offered with advantage to the service, with a view to inducing a larger number of educated men to offer themselves for the appointments. So far, however, as data are before us, we think the disappointment experienced by certain of those who have already joined, is rather due to their having formed undue expectations of the advantages of Indian service, than to unfair treatment."

TENDERS.

For a house and boundary-walls, at Tufnell Park, Holloway, for Mr. W. Day. Mr. George Truefitt, architect

Warne (accepted)	£1,986 0 0

* 20*l.* extra for repairs to top of spire.

THE *Times*, Sept. 15, speaking of Benson's Modern and Antique Watches in the Exhibition, says:—"As affording the most striking contrast, Mr. Benson shows with these a fresh exhibition of modern watches, with cases made from prize designs at the South Kensington Museum, some of which are fine specimens of engraving." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watchmaking, with descriptions and prices. It serves as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post. J. W. BENSON, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

FREEHOLD BUILDING LAND, adjoining the extensive Workshops and Manufactory of the South Eastern Railway at Ashford, Kent, TO BE SOLD by AUCTION, by

MESSRS. BAYLEY & SON, on the LAND in Wheeborough, on MONDAY, JUNE the 22nd, 1863, at SIX o'clock in the evening, in fifty lots, about TEN ACRES of valuable FREEHOLD BUILDING LAND, situate at Aylesford Green, in the parish of Willesborough, in the county of Kent, between Cadworth road and the South Eastern Railway Manufactory. No lot contains a frontage of less than 60 feet. The Vendor will make all the roads and approaches, and dedicate them to the public. The Land contains good brick earth, and building stone may be obtained close by. Plans of the estate, with printed particulars and conditions of sale, may be had of Mr. THOMAS PERKINS, Willesborough; of the Auctioneers; or Messrs. FURLEY, HALLETT, & CREERY, Solicitors, Ashford.

OLD KENT ROAD.—Capital Building Land; nominal Ground-rent.

MR. H. SOWDON will SELL by AUCTION, at the MART, on FRIDAY, JUNE 19, at TWELVE, a very desirable PIECE of BUILDING LAND, situate in Devonshire-grove, Old Kent road, near the Half-way House, having a frontage of 214 feet, and containing in the whole 3r. 10dp. Lease, fifty seven years, at a remarkably low ground-rent.—May be viewed. Particulars, plan, and conditions of sale, had of JOHN STEAVENSON, Esq. Solicitor, 25, Gracechurch-street, E.C.; at the Turk's Head Tavern, Old Kent-road, S.E.; at the Mart; and at Mr. H. SOWDON'S Office, 294, Old Kent-road, S.E. and 2, Moorgate-street, E.C.

UPTON E., near Forest gate Station and Wanstead.

MR. JOHN M. DEAN will SELL by AUCTION, at the MART, on THURSDAY, JUNE 25, at TWELVE, in Fifty-three Lots, a desirable FREEHOLD RESIDENCE, with stabling, coach house, green-house, and about three-quarters of an acre of Land laid out in pleasure grounds, &c. suitable for a family of respectability; and about nine acres of most eligible freehold building ground, situate at Upton, near the Forest-gate Station of the Great Eastern Railway, and only a short walk from Wanstead, Snaresbrook, &c. a most pleasant and delightful locality, with easy access of the City by rail and omnibus. The estate will be submitted in plots suitable for the erection of superior residences, for which the neighbourhood is well adapted. The plots will be bounded by well made roads properly kerbed and drained in conformity with the requirements of the local Board of Health.—May be viewed, and particulars and cards of sale, with plans may be had 14 days prior to the day of sale, at the Mart; of Messrs. DIGBY & SHARP, Solicitors, 1, Finsbury-circus, E.C.; Spotted Dog Inn, Upton; and of Mr JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

Information and all particulars as to the duties to be performed, may be ascertained on application to the Town Clerk, or to the Local Surveyor, Townhall, Blackburn. None but a skilled and competent hand need apply.—Applications (in own handwriting), with testimonials to ability and competency of character, steadiness, and sobriety, may be sent to the Town Clerk's Office, on or before SATURDAY, the 27th day of JUNE instant, endorsed "Application for Draughtsman."—By order, HENRY SAWARD, Town Clerk

Townhall, Blackburn, June 5, 1863.

TO SURVEYORS

THE EASTBOURNE DISTRICT LOCAL BOARD are desirous of receiving applications for the Office of SURVEYOR and INSPECTOR of NUISANCES. The salary will be 150*l.* per annum. The person appointed will be required to give such security as the Board may approve for the due performance of the duties of the office. The bye-laws regulating the duties may be seen, and any other information obtained, at the Office of the Board.—Applications, with testimonials, to be addressed to the Clerk, and delivered at the Office of the Board, 7, Terrace, Eastbourne, on or before the 7th day of JULY next, endorsed "Application for Appointment of Surveyor."—By order of the Board,

J. H. CAMPION COLES, Clerk.

RIVER WITHAM DRAINAGE.—WANTED, immediately, a SURVEYOR of the Witham Drainage. His duties will be to superintend the sea and inland sluices, bridges, banks, and all other works of drainage throughout the several districts, which extend from Lincoln to Boston, and thence to Wainfleet; and to take the entire practical management of the working of the drainage, under the directions of the General Commissioners. Also to COLLECT the RATES and TAXES and BANK RENTS of the Drainage. The surveyor and collector will be required to prove for all such assurance as he may find necessary, to pay travelling expenses, and to give security to the extent of 2,000l. By the resolutions of the General Commissioners of the 6th inst. it is prescribed that the person to be appointed shall be a thoroughly efficient practical man, possessed of sound knowledge of engineering, particularly as applied to the purposes of drainage. In the event of his duties being satisfactorily discharged, he will be at liberty, by special permission of the General Commissioners, to undertake other engineering duties, but not to engage directly or indirectly in trade or any other business. The salary is 500l per annum, with house, estimated as worth 20l. a year, free of rent, rates, and taxes. Applicants will not be required to attend personally, unless specially requested. Applications in writing, stating age, and the nature of the previous experience of the applicant in engineering works, and previous testimonials, are to be addressed (postage paid), marked "Witham Drainage Surveyorship," to "The Clerk to the General Commissioners, Boston," on or before THURSDAY, the 2nd day of JULY next.—By order,

F. T. WHITE, Clerk to the General Commissioners.

OCTAVIUS SMITH, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 20, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect colite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is unnecessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.

HY. GEORGE & COMPANY,

No. 1, BOLD-TERRACE, CHESTER.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two first-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

GEORGE JENNINGS,
Sanitary and Engineering Depôt, Palace Wharf, Rupert-street, Lambeth, S.

POLYTECHNIC.—All the Lectures and Entertainments as delivered before their Royal Highnesses the Prince and Princess of Wales, the Prince and Princess of Hesse, Professor Pepper's Great Lecture, Saturday at 4 and 8, and every other day at half-past 1 and 8. Von Weber's Grand Opera of "Der Freischutz." Engagement of Herr Seemon for his remarkable imitations of birds and other animals. Entirely new series of dissolving Views of Poland and the Poles, with Lecture by J. Millard, Esq. describing the Rebellion. Wrongs of that Country. Fascinating Wonders by J. L. King, Esq. N.B.—The Ghost Illusion was invented by H. Dircks, Esq. C.E. and has since been improved and patented by Messrs. Dircks & Pepper.

TO IRONMONGERS and OTHERS. TO BE DISPOSED OF, an Old-established IRONMONGERY BUSINESS, in one of the best localities near the West End. The premises are in excellent condition for conducting an extensive trade. Several forges fitted up and complete. The stock to be taken at a valuation. For further particulars apply by letter, addressed to A. B. care of Messrs. Farmer & Gorbel, 92, St. John-street, Clerkenwell.

TO CARPENTERS.—A very snug little BUSINESS FOR SALE in the heart of the City of London.—Apply, personally, to Messrs. HILL & HOYLE, Solicitors, 73, Cannon-street, E.C.

TO BE LET, an old-established GENERAL BUILDER'S BUSINESS, in a market town, in Surrey, ten miles from Guildford, affording a rare opportunity for an enterprising man, with a small capital. Satisfactory reason for the present owner giving it up.—Address, A. J. Office of "The Builder."

BUILDING LAND to BE LET, at Canonbury (Marquess-road), at Lower Norwood, a most eligible site, commanding beautiful views, close to the station; at Clapham-rise, Abercairn's-road, Bedford-road, some excellent sites for genteel residences. Also at Edward's-road, Bow, some excellent sites for ample manufactories. Money to lend on good security. Apply at the Offices of Mr. J. EDMESTON, Architect and Surveyor, 5, Crown-court, Old Broad-street, E.C.

WOODFORD RAILWAY.—THE GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET or BUILDING purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 200 yards only from the Estate, at the City is reached in twenty five minutes. The Leases will contain a clause entitling the lessee to purchase the Freehold within a specified time. LAND also TO LET at Shacklewell, Tottenham, Ruislip; some very eligible SITES in the Grove-road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 27, Cannon-street.

BUILDING LAND in FLEET STREET TO BE LET, about 48 feet frontage, and 83 feet deep.—For further apply to J. JOHNSON, Esq. 9, John-street, Adelphi; or to Mr. JAMES ARDING, 60, Bucklersbury, Fleet-street; or Messrs. RUSHWORTH, JARVIS, & ABBOTT, bankers, Regent-street, and 13, Change-alley, Cornhill.

DESIRABLE BUILDING GROUND, at BALL'S POND, within 2¼ miles of the Royal Exchange.—The Worshipful Company of Cutlers give Notice that, on the 29th JUNE, 1863, they will be prepared to receive TENDERS (to be sealed and delivered at Cutlers' Hall, Cloak-lane) for LETTING, on a Building Lease, for 99 years, a PLOT of FREEHOLD GROUND (land-tax redeemed), situate on the Ball's pond-road, about half way between the Angel and Kingsland turnpike-gates, and adjoining the Company's Almshouses, containing an area of about 21,100 feet, with a frontage of 106 feet on the high road, by a depth of 206 feet, walled in on two sides. The site is adapted for the erection of four shops fronting the Ball's-pond-road, and nine private houses, or for a public institution. For further particulars apply to Messrs. D'AUMONT & THOMSON, Lincoln's-inn-fields; or to Messrs. TRESS & CHAMBERS, Architects, 27, Queen street, Cheapside, E.C. at whose Offices plans may be inspected.

LAND TO BE LET, for building villas of a very eligible class, at Hendon, ¾ miles from the Regent's Park. The estate is freehold, and comprises 200 acres. Perfect title guaranteed. Money would be advanced as the building progresses. For particulars apply to CHARLES FREEMAN, Esq. 66, Lincoln's Inn fields, W.C.

MANUFACTURING WATERSIDE PREMISES, occupying about an acre of ground.—TO BE LET, on lease, direct from the freeholder, for a building term if desired, conveniently placed, MANUFACTURING PREMISES, situate at West Rain Abbey, Essex, a few minutes' walk from the Stratford-bridge Station of the North Woolwich Railway, and with waterside frontage to navigable River. The ground occupies a site of about one acre. The buildings are spacious ground-floor erections, and there is a handsome and lofty brick chimney shaft.—For particulars, apply to Messrs FULLER & HORSEY, 13, Billiter-street, London, E.C.

CITY of LONDON.—BARBERS' HALL. TO BE LET, on a Building Lease, Nos. 33, 34, and 35, Monkwell-street, Wood-street, and a portion of the Court-yard Hall and Offices in the rear.—For particulars and plans, apply to the Beadle, at the Hall; or to the Clerk, HENLEY GROSE SMITH, Esq. 4, Warnford-court, Throgmorton-street, E.C.; or to Mr. C. J. SHOPPEE, Architect, 61, Doughty street, W.C.

FREEHOLD LAND TO BE SOLD or LET on Building Leases:—Two Acres near Forest-hill Railway-station; One Acre adjoining Norwood Railway-station; Three Acres at Glengall Grove-road, Old Kent road.—Apply to Mr. MAY, Acorn Wharf, Old Kent road.

TO BE LET, a capital WHARF and DRAWDOCK, known as "Searle's Wharf," most eligibly situated at the foot of New Westminster Bridge, and opposite the Houses of Parliament

This drawdock has been closed for some years, and is now about to be re opened

From its excellent situation and the probability of the Scotland-yard Wharfs being closed at an early date by the Thames Embankment, a very valuable business may no doubt be depended on.

A residence is attached, which may or may not be taken with the wharf or drawdock

Apply to Mr W. HEWETT, 84, York-road, Lambeth.

LAND, situate on Bromley-hill, Kent, TO BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it has a sub soil of white sand and dry gravel, and a supply of very fine spring water—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

NEW KENT ROAD.—DOVER PLACE, Saint Bartholomew's Hospital.—TO BE LET, from LADY-DAY next, on Repairing Leases for twenty-one years, the HOUSES numbered 17 to 27, inclusive.—For further particulars apply at Mr. HARDWICK'S Office, No. 1, Henrietta-street, Cavendish-square.

WILLIAM WILBY, Clerk.

St. Bartholomew's Hospital, May 28, 1863.

OFFICES, light and airy, overlooking Bedford-square, TO BE LET, with every convenience, including tea and attendance. -Apply at 6, Caroline-street, Bedford square.

WANTED, PREMISES suitable for a small BUILDING TRADE, in the City or contiguous, but must be within two miles' radius east of St. Paul's Locality no object; and if same trade a small stock might be taken at a valuation. Address, A Z Dawson's Advertising Offices, 74, Cannon-street, City.

WOODFORD.—PLOTS of BUILDING GROUND TO LET, on the Grove Estate, within five minutes' walk of the George-lane station, close to the church, and twenty minutes by rail from Fenchurch-street: has high and dry; water supplied by East London Water Company. Apply to the freeholder, WASHINGTON SINGLE, Esq. the Grove, Woodford. Money advanced

TO BE SOLD, some excellent CARCASES, in Mansfield road, Kentish Town. Leases about ninety years, direct from the freeholder.—Inquire of Mr. LURENCE, Builder, Oak Village, Kentish town; or, Mr. MOORE, 122, Euston-road, N.W.

BUSHY PARK ESTATE.—Teddington.—Near the New Railway Station.—TO BE LET, on the Main Road, at 5s. per foot frontage, with a depth of 200 feet, several eligible plots of FREEHOLD LAND, for the erection of Villa Residences, that estate overlooks Bushy Park, and is surrounded by magnificent trees.—For further particulars apply to Messrs R KENYON & CO, Auctioneers and Land Agents, 1, Aldermanbury, City.

TO BUILDERS, &c.—TO BE LET, on BUILDING LEASES, ELIGIBLE FREEHOLD PROPERTY, commanding extensive and picturesque views over Bushy Park, the Thames, &c Gravelly soil.—Apply to Messrs. KENT & SON, Solicitors, Hampton.

TO BUILDERS.—Several Valuable PLOTS of BUILDING LAND, TO BE LET, in Kentish and Camden Town, Primrose Hill, West Drayton, Norwood, and Chelsea.—For plans and particulars apply to R. H. MOORE, Architect, 10, Wallbrook, E.C.

TO BRICKMAKERS, BUILDERS, and OTHERS.—About SIXTY ACRES of good CLAY for SALE, about nine miles west of London. Canal, railway, and road all on the land.—For particulars apply to Messrs. LINDSAY, MASON, & FISHER, Solicitors, 84, Basinghall street, E.C

PUTNEY.—To BUILDERS and OTHERS. First-class BUILDING LAND TO BE LET, on the main road to Putney (within 150 yards of the railway station), with a site for a public-house. Lease, ninety-nine years; ground-rent moderate Advances made to respectable parties. For plans, &c apply to J H. BOWLEY, Esq. Architect, 17, St. Helen's-place, City

BUILDER'S PREMISES, HACKNEY.—TO BE LET, on LEASE, a capital YARD, with spacious workshops and offices, and with or without dwelling-house There is a small stock of well seasoned material, which may be purchased at a valuation. For particulars, apply to Mr THOMAS BULL, Auctioneer, 60, Cornhill, E.C.

RED HILL.—BUILDING LAND.—An Upland Slope, commanding singularly fine and extensive views, and a park like meadow with much well-grown timber, both adjacent to the Junction Station These two plots of land are the only elevated sites available for residential purposes.—Apply to Mr. ALLSOP, Red Hill, or 3, Union-court, Old Broad-street, E.C.

BERKS, opposite to the Wellington College, and close to the Railway Station.—TO BE SOLD, 300 ACRES of FREEHOLD LAND, to which the attention of Public Institutions and Builders is especially invited, the situation being high, dry, and eminently healthy; light soil, the land gently rising, having the advantage of a plantation belt, with important and extensive frontages, and screened on the north by a wood; brick earth on the estate, also farmhouse and buildings, which will be found useful. For particulars and terms apply to Mr. ROBINS, Auctioneer and Estate Officer, 5, Waterloo-place, Pall-mall, where a plan may be seen The quantity of land would be divided if required.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding PATENTS—their cost and mode of procedure to be adopted—issued gratis by the General Patent Company (Limited), 71, Fleet street, London. ROBERT M LATHAM, Secretary.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving a publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. TENTNOR, ISLE of WIGHT.—Second Testimonial:—"March 10th, 1862. In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON

STEPHENS'S STAINS for WOOD.
A SUBSTITUTE for PAINT, and at HALF the COST

Mr. STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. E. H. CHICHESTER, of Chittlehampton, near South Molton:—

"The effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church."

H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

NOTICE.—Builders and Decorators will
find superior and unparalleled advantages in WEALL'S PATENT STAINS, conquering the rich oak, satin wood, wainscot, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling-house, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the minature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c.—To be had of T. J. HOGG, 3, Brunswick place, City-road, E.C.; Price 8s. per gallon. Post orders will have best attention.

IMPORTANT to BUILDERS.—This new system of staining cathedral church, libraries, halls, &c. to resemble rich oak, &c. is most magical and exquisite, and only requires a trial to prove the estimated advantages realized in the finishing of work. Those who have not yet used it should do so, being less expensive than the common articles.

CROWDEN and GARROD

PATENT GRAINING APPARATUS.—
TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person not having his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW Patent Graining Tool Manufacturer, 33, High-street, Marylebone Louden, W.

N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post office order for 22s.

PRIZE MEDAL, 1862.

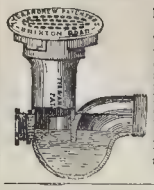
Manufacturers of Silicates of Soda and Potash, Aluminates of Soda and Potash,

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;



PATENT SILICEOUS PAINT, FOR COATING STONE, CEMENT, STUCCO, &C.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

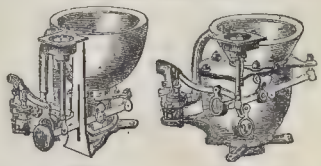
PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which combine the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo Silicic process can as readily be applied to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

TYE & ANDREWS' NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.

3s. 9d.



The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

J. TYLOR & SONS' PATENT
REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick lane, Newgate-street, London.

HAY'S PATENT WATERPROOF GLUE and INDIA-RUBBER VARNISH.—To ARCHITECTS, BUILDERS, PAPER HANGERS, &c. &c.—The WATER-PROOF GLUE is a special anti-damp, and is suitable for contractors, joiners, coffin-makers, &c. &c. The VARNISH for damp walls, previous to papering, coating zinc verandahs, &c. &c. Copy of a letter from Messrs. Rogers & Booth, contractors, Gosport:—

"We have repeatedly used your Waterproof Glue as a preventive against damp, and have found it most valuable in preparing walls to receive paper. In one instance, where the walls were thoroughly saturated with moisture from earth filled against the outside, we used your varnish internally, and papered the surface, within a few hours of its being applied, with complete success. We have also used your preparation for coating a large number of cast-iron piles, at the Gunwharf, Portsea, for her Majesty's War Department."

To be had from all Ironmongers, Oil and Colourmen, &c.

Manufactory, Claude-street, Portsmouth; Mr. GEORGE WEEKS, Manager. GEORGE C. WARDEN & CO. General Agents, 12, London-street, London, E.C. where specimens of its application can be seen.

FULLER & HORSEY will SELL by AUCTION, on TUESDAY, JUNE 16th, 1863, at ELEVEN o'clock, on the PREMISES, Eagle Wharf-road, New North road, a very powerful VENEER KNIFE-CUTTING MACHINE, capable of cutting from 16 to 70 veneers to the inch from wood 7 feet 11 inches long by 4 feet 6 inches wide, with rising and falling table 5 feet by 8 feet. Cast-iron planed bed, with screws, self-acting feed and reversing motion, overhead motion and driving shaft, made by Haley, Manchester. Also, a wrought-iron cylindrical STEAMING TANK, 6 feet diameter, 12 feet long. To be seen at any time by special order, which, with descriptive particulars, may be had of Messrs. FULLER & HORSEY, 15, Billiter-street, London, E.C.

Ye, Billiter-street, 21st May, 1863.

VALUABLE FREEHOLD AND COPYHOLD BUILDING LAND, WHITECHAPEL, occupying a site of about six acres

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the MART, on WEDNESDAY, JULY 1, 1863, at TWELVE o'clock, in one LOT, a most important Sale of FREEHOLD and COPYHOLD LAND, about six acres, situate in the rear of the Whitechapel Distillery, Bucks-row, abutting upon the Eastern Counties Railway, from which a siding must be formed. Also, the approaches from Wentworth-street Selby-street, and other adjoining streets. For the erection of any large manufacturing establishment this property is of large value, from its space and proximity to the city. Printed particulars are in course of preparation, and with plans, may be had, this day had of Messrs. TENNANT & DARLEY, Solicitors, Raymond's-buildings, Gray's-inn, W.C.; of Messrs. BUCKETT, SON, & PARTON, Solicitors, Lincoln's-inn-fields, W.C.; at the Mart, and of Messrs. FULLER & HORSEY, Billiter street, London, E.C.

CROYDON, SURREY.—Excellent Building Materials.

MR. WHITTINGHAM is instructed to SELL by AUCTION, on the PREMISES, close to the town of Croydon, on MONDAY, JUNE 22, 1863, at TWELVE for ONE o'clock precisely (SEVENTEENTH PORTION OF THE VERY USEFUL BUILDING MATERIALS of some of the buildings belonging to the Addiscombe College, comprising about 80,000 bricks, a large quantity of lath, paving stone, and rubble; a handsome cast-iron stove, windows and frames, deal timber, consisting of beams, joists, floor boards, roofing boards, lintels, purlins, &c.; chimney pots, iron water piping and sashing, fencing, &c.—May be viewed on the Friday and Saturday before the sale. Catalogues may be obtained of the Foreman on the Estate; and of the Auctioneer, 11, Moorgate-street, E.C.

PLUMSTEAD, KENT.—Freehold Estate, comprising a brick-built House, Five Cottages, Outbuildings, and about Two-and-a-half Acres of Land, suitable for building purposes

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the TOWN HALL Woolwich, on FRIDAY, JUNE 26, 1863, at SIX for SEVEN o'clock in the evening, a FREEHOLD ESTATE, consisting of a brick-built House, containing attic in roof; on the second floor, two large bedrooms, first floor, four rooms; ground floor, two large bedrooms, two parlours, store-room, kitchen, &c. A commodious two-story House, Five Cottages, and about two acres of market garden Land in the rear; land tax redeemed; suitable for building purposes; situate off the high road from Woolwich to Erith, and a short distance of the Arsenal Station, and near to the Plumstead Station on the North Kent Railway. The whole will be first offered in one lot, and if not sold, the premises will be offered in two lots, and the land in twenty-two lots for building purposes. None-tenths of the purchase money may remain on mortgage or contract at five per cent, to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, E.C.; and of Mr. JOHNSON, on the Shooter's Hill Estate; of Mr. R. GREEN, Richard-street, Woolwich; and at the Place of Sale.

WIMBLEDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, JULY 6, 1863, at TWELVE for ONE o'clock, in 63 Lots, the remaining portion of the valuable FREEHOLD BUILDING LAND, free from tithe and land tax, with frontages to the new road called Hartfield-road, to the Wimbledon Station, on the main line of the London and South-Western Railway. Nine-tenths of the purchase money may remain on mortgage or contract at five per cent, to be paid in nine years by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained ten days before the sale, of Messrs. RUSSELL & DAVIES, 59, Coleman-street, E.C.; and of the Auctioneer, 14, Moorgate-street, E.C.; and at the Place of Sale.

ADDISCOMBE COLLEGE, CROYDON, SURREY.—Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the GREYHOUND INN, Croydon, on TUESDAY, JUNE 23, 1863, at SIX for SEVEN o'clock in the Evening, a further portion of this eligible ESTATE, late the property of the Hon. the East India Company, consisting of about 32 Lots of eligible FREEHOLD BUILDING LAND, with frontages to the St. James's and Park-roads. The lots are well adapted for a good class of Villa Residences. The property is within ten minutes' walk of the New and Handsome Railway Station, a mile of that at West Croydon; and when the Addiscombe Railway is completed the station will be on the estate, thus bringing the property in constant communication with the City and West End at all times of the day. Nine-tenths of the purchase money may remain on mortgage or contract at five per cent, to be paid in nine years by half yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained about ten days before the sale, of Mr. PALACE, South Lodge, Addiscombe Road, Croydon; at the Station in the neighbourhood; of Messrs. RUSSELL & DAVIES, 59, Coleman-street E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; and at the Place of Sale.

GEORGE MITCHELL'S MARBLE and STONE WORKS, WALTON STREET, BROMPTON, S.W.

Notice of PRIVATE SALE of about 200 MARBLE CHIMNEY-PIECES, to be sold at very reduced prices to save the expense of removal to the Brompton rooms, the following Marbles, viz.: Statuary, Rouge Royal, Black and Gold, Black, Sienna, Bardilla, Dove, California, St. Ann's, Rouge Jasper, Jeune Fleure, Brocatella, Genoa Green, Irish Green, Blue Belgic, Emperor's Red, Irish Fossil, Campan Melange, Vein, Sicilian, and various excellent specimens of British Marbles, varying in price from 1l. 10s. to 30l.; and for elegancy of design, workmanship, and quality, not to be surpassed in England. Purchases to the extent of 50l. and 50l. approved bills of three and four months will be taken, less 25 per cent cash. Purchasers from the country will be supplied with packing cases, and the same packed and delivered to any of the metropolitan stations for 1 per cent, on the amount purchased.

ELIGIBLE OPPORTUNITY FOR BUILDING.—BISHOP'S WALTHAM, HANTS.

MR. R. AUSTIN is favoured with instructions to SELL by PUBLIC AUCTION, at the CROWN HOTEL, Bishop's Waltham, on TUESDAY, JUNE 16, 1863, at ONE for TWO o'clock, the LEASES of many very valuable BUILDING SITES, with frontages to the Winchester and Portsmouth main turnpike roads, and near the improving town of Bishop's Waltham (which has long been noted for its salubrity), close to the Railway Station, and overlooking an ornamental sheet of water and the picturesque old Palace Ruins, having extensive and charming views over a hill-and-dale and well-wooded country, within about thirty minutes' distance of Portsmouth, Southampton, and Winchester, and about 2½ hours from the metropolis. The Bishop's Waltham Clay Works and Messrs. Blanchard's Terra-cotta Factory, employing many highly parliamentary, together with the railway and important works of improvement now in progress at Bishop's Waltham, make these sites very desirable for building purposes. The public are informed that they would not now have the opportunity to purchase these much-coveted building sites but for the recent enfranchisement of the land.—Plans to be seen at the Offices of the Auctioneer, 20, Portland street, Southampton, and Bishop's Waltham of whom particulars may be obtained.

GREAT WESTERN RAILWAY.—Clearance Sale of Property in the Goods and Passenger Department.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the Great Western Railway Company, to SELL by AUCTION, at the GOODS STATION, Paddington, on MONDAY and TUESDAY, JUNE 22nd and 23rd, at TEN for ELEVEN, a large quantity of Miscellaneous PROPERTY: comprising, a 20-horse power steam-engine, 50 tons of new iron of various descriptions, fitters-making machine, washing and mangling machine, pug lead, block tin, copper and brass, 80 casks of cement, dry walnut-tree planks, tobacco, rice, leather, several cases of artificial flowers, linen and woollen rags, wine, brandy, &c.; also the unclaimed property in the Passenger Department, comprising the usual assortment of wearing apparel, umbrellas, bags, railway wrappers, and numerous other effects.—May be viewed on FRIDAY and SATURDAY previous, with Catalogues only, which may be had at 6d. each, of Messrs. PULLEN, HORNE, & EVERSFIELD, 40, Parliament street, Westminster, and 8a, Fore street, City.

TO CONTRACTORS, BUILDERS, AND OTHERS.—Surplus Plant and Materials

PULLEN, HORNE, & EVERSFIELD will SELL by AUCTION, on the GROUND, adjoining the Railway Station, King's cross, St. George's Wharf, Agar Town, York road, and Chalk-place, Gray's-inn-lane, on TUESDAY, JUNE 16, and following day, at TWELVE, in lots, by order of John Jay, as in consequence of the completion of the Metropolitan Railway Works, the remaining portion of the valuable and extensive SURPLUS MATERIALS and PLANT, comprising trollays, dobbin carts, navvy, crowding, and bearing-off barrows, blocks and falls, chains and slings, wrought and cast iron, round and work skips, wrought iron wheeling plates, stone paving, slates, two capital river barges, two steam wash boats, 40 loads of capital timber, in sticks and balk, plank, die square, struts, sleepers, &c.; a large quantity of centreing, scaffold-poles and boards, carts, screens, harness, ropes, engineers' and contractors' boarded erections of sheds, an engine and other effects. May be viewed the days previous. Catalogues had at the Places of Sale, and of PULLEN, HORNE, & EVERSFIELD, 8a, Fore street, E.C. and 40, Parliament street, S.W.

Canons' Marsh, Bristol, June 9th, 1863.

HIGHGATE.—23 Acres of Freehold Building Land.

MESSRS. WINSTANLEY have received instructions to offer for SALE by AUCTION, at the MART, on THURSDAY, JUNE 25, in lots, the remaining portion of the BROOKFIELD ESTATE, beautifully situate on the southern slope of Highgate Hill, and comprising about TWENTY-THREE ACRES of LAND, available for building purposes, having extensive frontages, and commanding picturesque views. The lots will vary in quantity from one to three acres, affording to purchasers an opportunity either to erect residences for their own occupation, or to build for the accommodation of parties carrying on business either in the City or at the West-end. The property has, at a short distance, the great advantage of the Railway, and it combines communication with all parts of the metropolis, with the probability shortly of increased facilities, is within the privileged district, and is free from rates, and from the Parochial School.—To be viewed. Printed particulars may be obtained of Messrs. RANKEN, FORD, LONGBOURNE, & LONGBOURNE, Solicitors, No. 4, South-square, Gray's Inn, W.C.; of Messrs. REED, REW, & CO., Solicitors, 2, Henrietta-street, Covent Garden, W.C.; at the Place of Sale; and of Messrs WINSTANLEY, Paternoster row, E.C.

FREEHOLD BUILDING LAND, close to the Norwood Junction Station on the London, Brighton, and South Coast Railway, at which upwards of 100 trains stop to and from London Bridge and Victoria daily, and only a short distance from an intended station on the Mid-Kent and Addiscombe Railway, about nine miles from London

MESSRS. WINSTANLEY have received instructions to offer for SALE by AUCTION, at the MART, Bartholomew-lane, on WEDNESDAY, the 1st of JULY, in thirty lots, Lot 1 being the FREEHOLD PROPERTY, known as the ENDMILE PARK ESTATE, land-tax redeemed and tithe free: consisting of about twenty-three acres of most eligible building land, desirably situate between Woodcote Lodge, near South Norwood, in the parish of Croydon, and the Norwood Junction Station, commanding extensive views of the surrounding picturesque scenery, and within a short distance of the Crystal Palace. The estate possesses important frontages nearly 6,000 feet to capital roads, and presents excellent sites for the erection of villas or other residences, for which there is a growing demand in the locality. Lot 2 will be a large quantity from 40 to 50 acres, and Lot 3 about half an acre to two and a half acres, and in the hands of building capitalists this property offers attractions of no ordinary character. To be viewed. Printed particulars, with plans, may be had, twenty-one days preceding the sale, in Croydon; of Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors; of Mr. JOHN BERNEY, Surveyor; at the Greyhound Inn, the Bedford Arms, Wyndham road, and the Windmill, St. James's-road, Croydon common; the Jolly Sailor, South Norwood; and in London, at the Place of Sale; and of Messrs. WINSTANLEY, No. 10, Paternoster-row, E.C.

BISHOPSGATE STREET WITHIN.—TO BUILDERS, CONTRACTORS, TOOL DEALERS, AND OTHERS

MR. MARSH has received instructions from the Directors to SELL by AUCTION, on the PREMISES, on TUESDAY, JUNE 30th, at ONE o'clock, punctually, the whole of the Valuable MATERIALS and FIXTURES of the National Provincial Bank of England, 112, Bishopsgate Street Within, in consequence of the site being required for the re-building of new banking premises: including about 35 squares of slating, oak and fir timber in rafters, joists, and principals; 2 doors, 4 by 9 feet, of polished mahogany, and other doors; 75 pairs of elegant sashes; a handsome stone staircase, with large landing; York and Portland Stone, in paving, steps, cornices, string courses, sills, plinths, architraves, and stone pediment and portico; about 1,000,000 sound stock bricks; 20 tons of lead, in flats, gutters, hips, cesterns, and pipes; mantels and other chimney pieces, stoves, ranges, fittings, and effects.—May be viewed two days prior to the Sale, and Catalogues obtained on the Premises; of JOHN GIBSON, Esq. Architect, 13, Great Queen-street, Westminster, and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion House.

STRATFORD, ON THE CHOBHAM ESTATE.

MR. JOHN M. DEAN will SELL by AUCTION, at the SWAN INN, Stratford, on TUESDAY, JUNE 23rd, at FOUR p.m. in Eighteen Lots, Fifty-six Plots of valuable FREEHOLD BUILDING GROUND, having an aggregate frontage of 1,107 feet on Leyton-road, Lavett-road, Chobham-road, Chandos-road, and Temple Middlene, by depths of from 140 to 150 feet, and being some of the most eligible plots on the estate. The land is pleasantly situate, in a particularly dry and healthy locality, within easy access of several railway stations, and bounded by good well made roads.—Particulars, with plans, may be had of H. HARRIS, Esq. solicitor, 34a, Moorgate-street, E.C.; at Messrs. MADOX & WYATT, 30, Clement's-lane, E.C.; SWAN, Stratford; and of Mr. JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

MR. JOHN MALLET, on MONDAY, the 13th day of JULY next, at the LONDON INN, Ivybridge, at TWO o'clock for HALF-PAST in the afternoon, either together or in the following lots (subject to such conditions as will be then and there produced, viz.: the FEE SIMPLE of all that BALTON or FARM, called "Wood and Blowdens," situate in the Parish of Ugborough, Devon.

Lot 1 comprises a good FARM-HOUSE, with all necessary farm buildings, and SEVENTY-SEVEN ACRES (be the same more or less) of superior orchard, meadow, arable, and pasture land, in the occupation of Mr. Richard Cole, as tenant thereof, for a term of seven or fourteen years from Lady-day, 1863. Also a SLATE QUARRY, measuring about four acres of same estate, which has been in work about a century, and which is now held under lease for a term of twenty-one years from the 24th JUNE, 1858, by E. T. Rose, of Wembrook, producing a large quantity of slate of a very superior quality. About fifty acres of the farm contain slate of the best description, and several acres more of the quality of slate, the rock being intersected.

Lot 2. Two superior COTTAGES, one of which is fit for the residence of a respectable family, having eight rooms, and the other cottage adjoining five rooms, with necessary outbuildings and Two Good Gardens and a Field of Land, containing 3a. 0r. 23p or thereabouts

The WHOLE of the PROPERTY is TITHE-FREE, and LAND TAX REDEEMED.

The above property being full of slate rock, within a mile and a half of the Stowford Siding, and also at two miles from Ivybridge and King Bridge-road, and on the South Devon Railway, only seven miles from the Port of Plymouth, and nine miles from Totnes, gives great facilities for sending slate to all parts of the kingdom. Such an opportunity for a spirited capitalist or company to enter into the slate trade is very seldom to be met with. From the great facilities for sending off the quarry by rail and water, it is quite certain that a large profit can be realised. To parties in search of desirable investment this estate presents an opportunity of more than ordinary advantage. The farm is pleasantly situated, and many good sites for building cottages could be let on the property. The market towns for cattle are Ivybridge, two miles (monthly); Modbury, three miles, ditto; and Totnes, nine miles, ditto. There is good trout fishing in the neighbourhood. Further particulars may be had on the premises, or may also be obtained of him; of the Auctioneer, Ashprington, near Totnes; or of Mr. WALTER FRIEND, Solicitor, Post-office Chambers, Exeter.

Dated 3rd June, 1863.

OLD BROAD STREET.—Highly important Freehold Property, close to the Stock Exchange, Royal Exchange, Bank of England, and other public buildings, occupying an area of upwards of 1700 square feet.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to offer for SALE by AUCTION, at the MART opposite the Bank of England, on FRIDAY, 26th JUNE, at TWELVE o'clock, unless previously disposed of by Private Contract, the very valuable FREEHOLD PROPERTY, comprising the site of Nos. 8, and 9, Old Broad-street, with the vacant ground in the rear adjoining the noble building recently erected by the Great Marine Insurance Company, fronting upon the Bank of London, and nearly opposite one of the entrances to the Stock Exchange. It possesses a frontage of 37 feet, extends in extreme depth about 60 feet, and has an area of 1,700 feet, and presents to any public company an opportunity rarely to be met with of securing a site for offices in one of the very best and most valuable situations in the City of London. To be viewed. Particulars, had 21 days prior to the sale, of W. PAYHAM, Esq., Solicitor, 17, Old Broad street, at the Mart, and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange.

IMPORTANT FREEHOLD PROPERTY in Wray Park, Reigate, comprising the Residence, with its garden and pleasure-ground, and several Pieces of Building Ground.

MR. JOHN LEES has received instructions from the Proprietor to SELL by AUCTION, at the MART, opposite the Bank of England, on THURSDAY, 23rd JUNE, at TWELVE o'clock, a most valuable and valuable FREEHOLD PROPERTY, bounded by Wray Park-road, Brighton-road, and Reigate-road, and including six residences, each pleasantly situated and commanding extensive views, a short distance from St. Mark's Church, in the Reigate town Railway station on the South-Eastern Railway, a mile and a half from Red-hill Junction, and only thirty minutes' journey by rail from London. The houses are planned with regard to the requirements of a family, and are known as Meadow-hill, Wray Park, Wray-mount, and Temple Court, having stabling, Mansion Villa, and two other residences with suitable accommodation, the whole having rates, gardens and pleasure grounds. The property of building ground possesses a frontage to the Wray Park-road, Brighton-road, and Reigate road, and are admirably adapted for the erection of gentlemen's residences, the whole containing an area of nine acres, and being of the value of upwards of 200 per annum. Particulars may be obtained of Messrs. PEPER ROAD, PRITCHARD, & WILTSHIRE, Estate Agents, &c. No. 28, Poultry, London; of Messrs. WATSON & SON, Solicitors, No. 13, Bouverie-street, Fleet street, London, and Hammersmith; at the Auction Mart, and of Mr. JOHN LEES, Estate Agent and Auctioneer, Reigate, Surrey.

THE CLIFF, SCARBOROUGH.—TO BUILDERS, CONTRACTORS, &c.—Extensive Sale of Building Materials.

MR. W. TASKER HART has received instructions from the Directors of the Scarborough Cliff Hotel Company, Limited, to SELL by AUCTION, on the PREMISES, on TUESDAY, JUNE 16, 1863, the whole of the BUILDING MATERIALS, except the bricks, of the lodging or dwelling houses, Nos. 1, 2, 3, 4, 5, 6, and 7, and the five cottages situate on the east side of St. Nicholas Cliff, and which said buildings are to be pulled down, and the materials cleared away on or before the 8th of JULY, 1863. Several of the houses have been built within the last eighteen years, and contain iron grates and timber of the best description. Each house will be put up for sale separately. Sale to commence at ONE o'clock precisely. The whole of the houses will be open for inspection one week prior to the Sale.—For conditions of Sale and further particulars, apply to Messrs. J. & J. MOODY, Solicitors, Scarborough; A. W. D. HEATHER, Esq. Solicitor, Leeds; CUTHBERT BRODRICK, Esq. Architect, Leeds; to Mr. WM. TASKER HART, Auctioneer, Scarborough; and at the Temporary Offices of the Company, 7, St. Nicholas Cliff, Scarborough.

To TIMBER MERCHANTS, CABINET AND PIANOFORTE MAKERS, BUILDERS, AND OTHERS

MESSRS. J. C. CLEMMANS & SON will SELL by AUCTION, at 4, BOUNDARY STREET, SHOREDITCH, on TUESDAY, JUNE 16th 1863, at TEN for ELEVEN, with at reserve, the entire well-assorted STOCK of Mahogany and Timber therein. To view the day prior to and morning of sale. Catalogues to be had on the Premises, and of the Auctioneers, No. 1, Spital square, Bishopsgate, and 21, Holywell-row, Finsbury-square.

ST. PANCRAS FREEHOLD LAND SOCIETY.—The last Portion of valuable Building Land, giving Votes for the County.

MR. W. H. MOORE is instructed by the mortgagees to SELL by AUCTION, at GARRAWAY'S, on THURSDAY, JUNE 18, at ONE, in twenty-two lots, valuable FREEHOLD BUILDING LAND, comprising three plots on the Red Seven Acres road Estate, nine plots on the Upper Hollway Estate, ten plots on the Perkins Rye Estate, and seven plots on the Guilford Building Estate, near the Holloway station, which confer a right of sole airship to the public school at Harrow, and the usual advantages of reduced railway tickets. Particulars, &c. at Garraway's; of J. WILLIS, Solicitor, No. 32, Percy-street, W.; and at the Auctioneer's Offices, 6, George-street, Euston-road.

[For remainder of Auctions see p. 432.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, June 13, 1863.

The whole outlay not to exceed 2,000*l*. A commission of 5*l*. per cent. on the cost of building, will be paid to the architect whose plans are adopted, to include a proper supervision of the works. The drawings, &c. to be forwarded under motto, to the Secretary, on or before the 20th JULY, 1863, and of whom further particulars may be obtained, on application.—By order of the committee,

Deal, June 13, 1863. J. B. EDWARDS, Secretary (pro tem.).

CONTRACTS.

TO BUILDERS.—Persons desirous of TENDERING for the RE-SEATING of the newly-built CHAPEL at East Leake, in the county of Nottingham, may inspect the plans and specification, and see the pattern seat, at the Chapel, East Leake, on and after MONDAY, the 22nd day of JUNE next. Sealed Tenders, endorsed "Tenders for Re seating Chapel, East Leake," to be sent to C. ANGRAVE, Esq., East Leake, near Notting ham, on or before TUESDAY, JUNE 30, 1863. The lowest or any tender will not necessarily be accepted.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE TO BUILDERS.

TENDERS are required for the ERECTION of QUARTERS for the Families of Married Soldiers, at Netley Hospital, in the County of Hants.

Parties desiring to Tender for these works are required to attend at this Office on TUESDAY, the 30th day of JUNE, 1863, at TWELVE o'clock, to appoint a Surveyor to take out the quantities in conjunction with the Government Surveyor. Each party will be required to pay the sum of one guinea for the quantities.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Netley, 6th June, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of QUARTERS and STABLES for MILITARY TRAIN, at Netley Hospital, in the County of Hants.

Parties desiring to Tender for the execution of these Works must leave their names at this Office, on or before the 30th day of JUNE, 1863, and pay the sum of Ten Shillings and Sixpence for the bills of quantities, which will be forwarded to each party, as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Netley, 6th June, 1863.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.—TENDERS are required for the RENEWAL of the SLATING, LEAD GUTTERS, VENTILATOR COVERS, and FLASHING, and for the REPAIR of BOARDING under SLATING and GUTTERS of the west wing of the Cavalry Barrack, Brighton.

Parties desirous to Tender for the execution of these works must call or send their names to this Office, between the hours of TEN a.m. and FOUR p.m. (Sundays excepted), from the 18th to 23rd of JUNE, 1863, inclusive, where they will receive every information to enable them to take out their quantities.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Brighton, 15th June, 1863.
